1. Application

This Specification is applicable to 14.4cm (5.7 inch) Blanview TFT-LCD monitor for non-military use.

- © ORTUS TECHNOLOGY makes no warranty or assume no liability that use of this Product and/or any information including drawings in this Specification by Purchaser is not infringing any patent or other intellectual property rights owned by third parties, and ORTUS TECHNOLOGY shall not grant to Purchaser any right to use any patent or other intellectual property rights owned by third parties. Since this Specification contains ORTUS TECHNOLOGY's confidential information and copy right, Purchaser shall use them with high degree of care to prevent any unauthorized use, disclosure, duplication, publication or dissemination of ORTUS TECHNOLOGY'S confidential information and copy right.
- © If Purchaser intends to use this Products for an application which requires higher level of reliability and/or safety in functionality and/or accuracy such as transport equipment (aircraft, train, automobile, etc.), disaster-prevention/security equipment or various safety equipment, Purchaser shall consult ORTUS TECHNOLOGY on such use in advance.
- © This Product shall not be used for application which requires extremely higher level of reliability and/or safety such as aerospace equipment, telecommunication equipment for trunk lines, control equipment for nuclear facilities or life-support medical equipment.
- © ORTUS TECHNOLOGY assumes no liability for any damage resulting from misuse, abuse, and/or miss-operation of the Product deviating from the operating conditions and precautions described in the Specification.
- © If any issue arises as to information provided in this Specification or any other information, ORTUS TECHNOLOGY and Purchaser shall discuss them in good faith and seek solution.
- © ORTUS TECHNOLOGY assumes no liability for defects such as electrostatic discharge failure occurred during peeling off the protective film or Purchaser's assembly process.
- © This Product is compatible for RoHS directive.

Object substance	Maximum content [ppm]
Cadmium and its compound	100
Hexavalent Chromium Compound	1000
Lead & Lead compound	1000
Mercury & Mercury compound	1000
Polybrominated biphenyl series (PBB series)	1000
Polybrominated biphenyl ether series (PBDE series)	1000

2. Outline Specifications

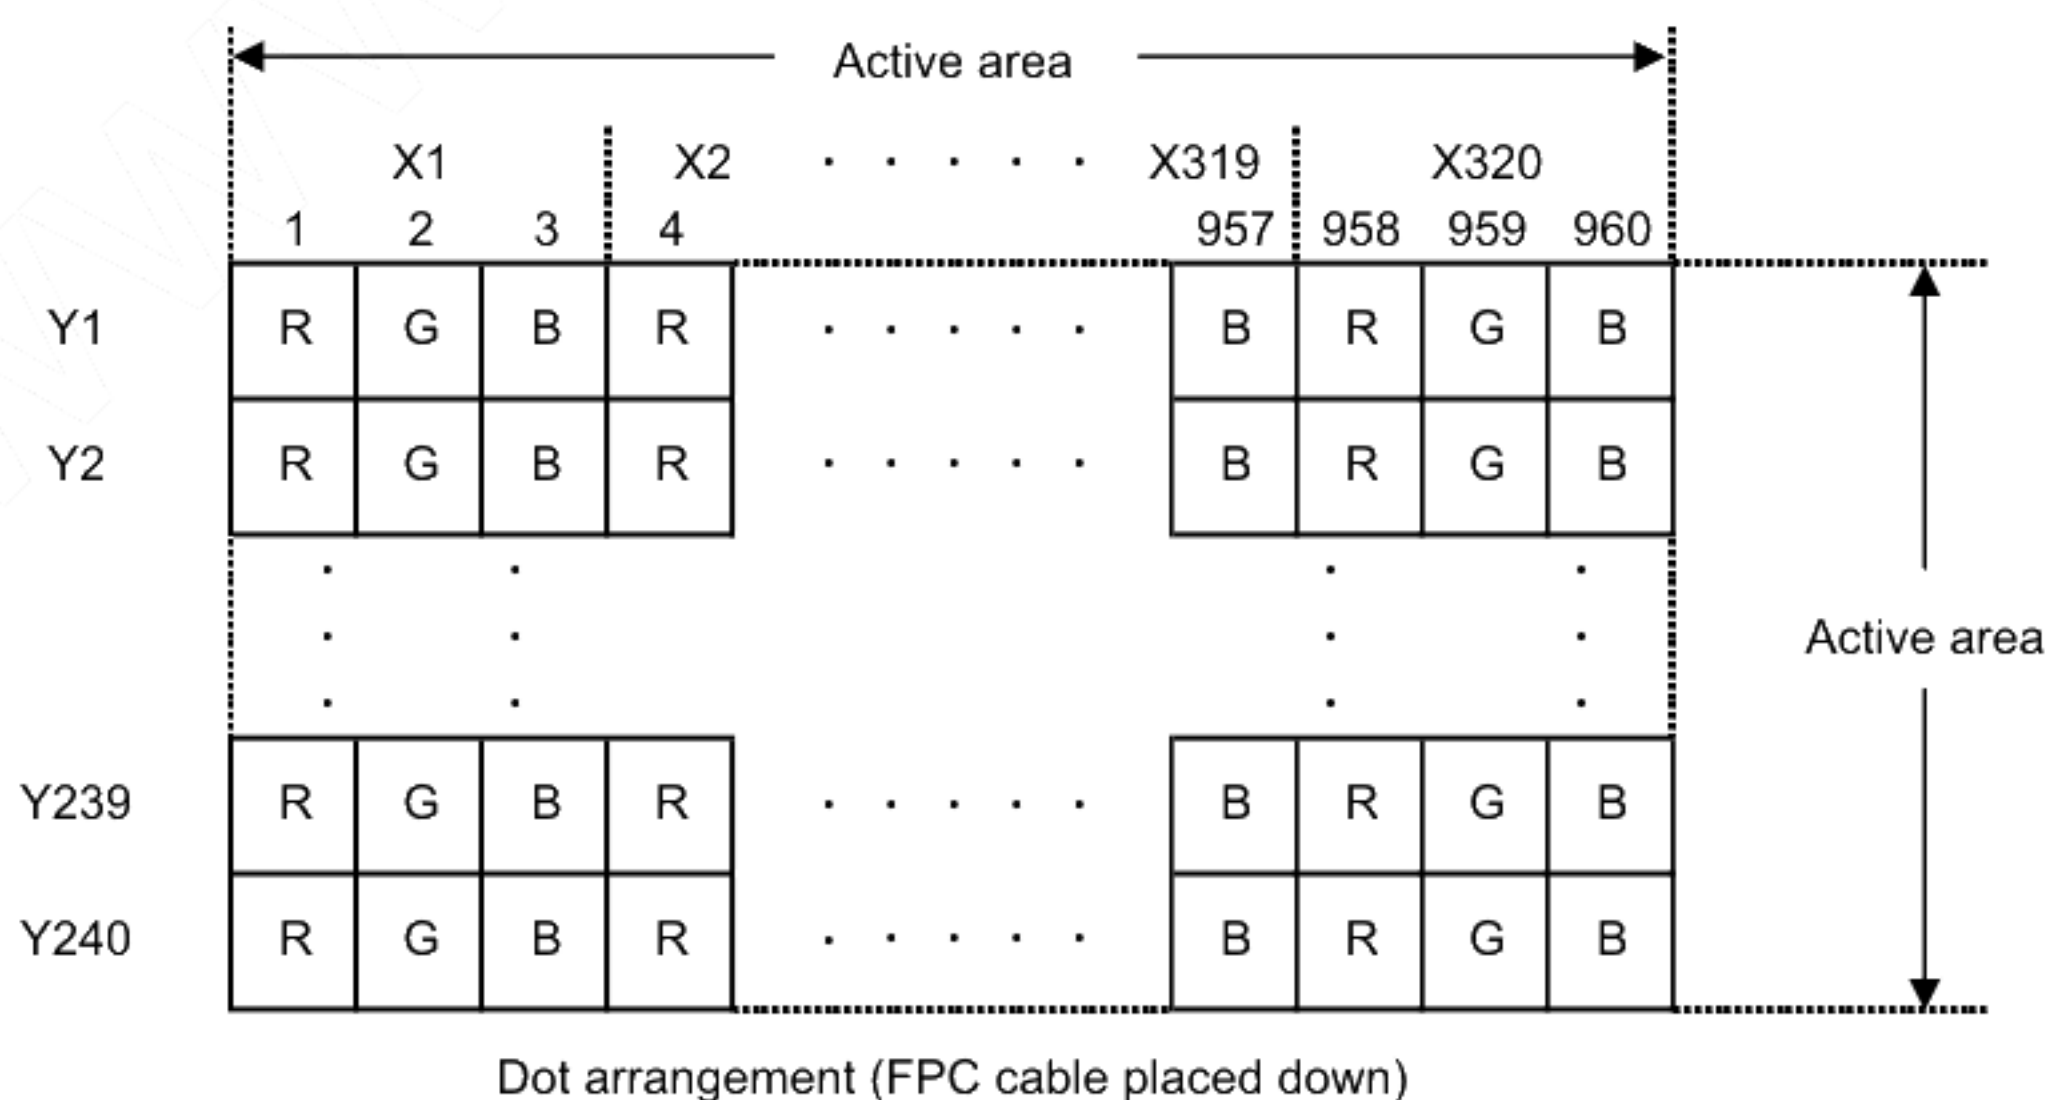

2.1 Features of the Product

- 5.7 inch diagonal display, 960 [H] x 240 [V] dots.
- Two kinds of input specifications can be selected.
 - "MODE" = "VSS"
 - 8-bit / 16,777,216 colors.
 - Various display controls and functional selection by 3-wire serial communication method.
 - "MODE" = "VDD"
 - 6-bit / 262,144 colors.
 - Various display controls and functional selection by terminal control.
- 3.3V voltage single power source.
- Timing generator [TG], Counter-electrode driving circuitry, Built-in power supply circuit.
- Power save (Standby) mode capable.
- Built-in rush current reduction circuit.
- Built-in panel residual charge reduction circuit.
- Long life & High bright white LED back-light and Touch panel operation monitor..
- Blanview TFT-LCD, improved outdoor readability.

	Indoor		Outdoor	
	Readability	Power Efficiency (Battery Life)	Readability	Power Efficiency (Battery Life)
Transmissive	Good	Good	Fair	Poor
Transflective	Fair	Poor	Good	Good
Blanview	Good	Good	Good	Good

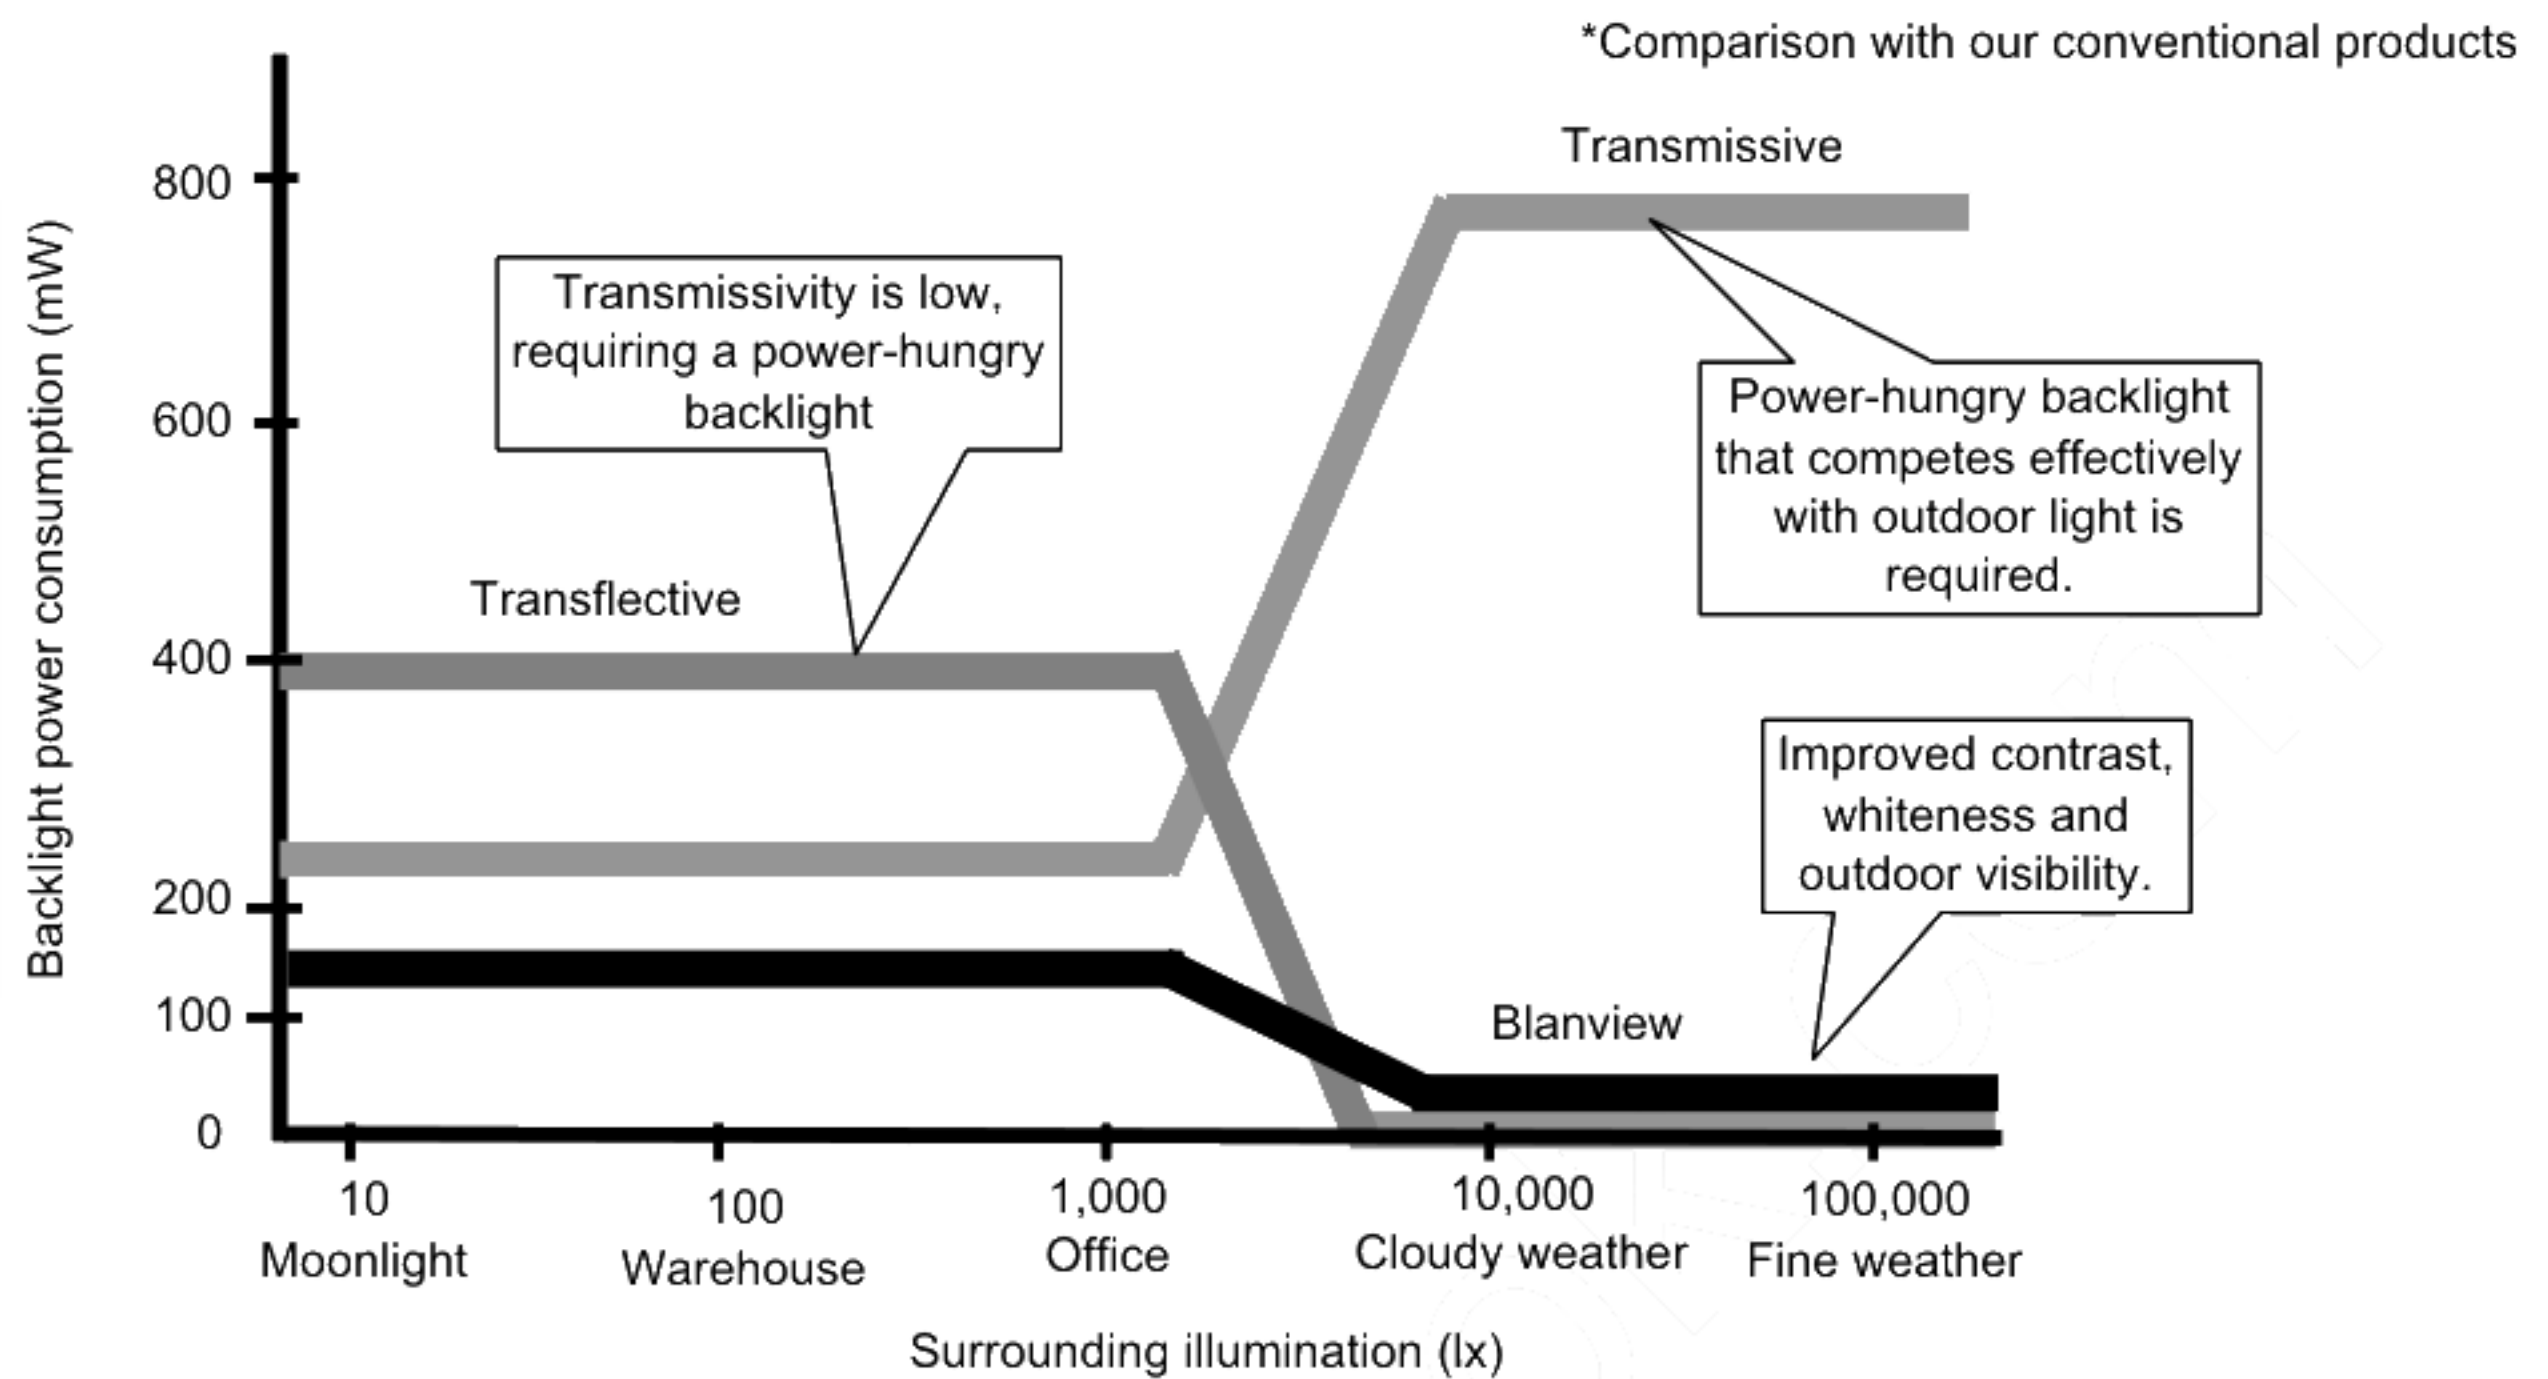

2.2 Display Method

Items	Specifications	Remarks
Display type	TN type 262,144 colors or 16,777,216 colors. Blanview, Normally white.	
Driving method	a-Si TFT Active matrix. Line-scanning, Non-interlace.	
Dot arrangement	RGB stripe arrangement.	Refer to "Dot arrangement"
Signal input method	6-bit or 8-bit RGB, parallel input.	
Backlight type	Long life & High bright white LED.	
Touch panel	Resistance type, transmissive analog tablet	Surface finishing: Clear

<Features of Blanview>

- Backlight power consumption required to assure visibility. (equivalent to 3.5"QVGA)

- Contrast characteristics under 100,000lx. (same condition as direct sunlight.)

With better contrast (higher contrast ratio), Blanview TFT-LCD has the best outdoor readability in three different types of TFT-LCD.

Below chart shows contrast value against panel surface brightness. (Horizontal: Panel surface brightness/ Vertical: Contrast value) LCD panel has enough outdoor readability above our Standard line. (ORTUS TECHNOLOGY criteria)

3. Dimensions and Shape

3.1 Dimensions

Items	Specifications	Unit	Remarks
Outline dimensions	130.32[H] × 101.20[V] × 6.93[D]	mm	Exclude FPC cable
Active area	115.20[H] × 86.40[V]	mm	14.40cm diagonal
Number of dots	960[H] × 240[V]	dot	
Dot pitch	120.00[H] × 360.00[V]	μm	
Hardness of Touch Panel surface	3	H	Load:4.9N,Angle:45° Reference judgment standard:JIS-K5600
Weight	149.5	g	Include FPC cable

3.3 SERIAL LABEL (S-LABEL)

1) Display Items

A section : Bar code

B section : Combination of a character

Details of B section

Upper column: It indicates The least significant digit of manufacture year (1 digit), manufacture month with below alphabet (1letter), model code (5characters), serial number (6digits).

*	*	*****	*****

Contents of display							
a	The least significant digit of manufacture year						
b	Manufacture month	Jan-A Feb-B	Mar-C Apr-D	May-E Jun-F	Jul-G Aug-H	Sep-I Oct-J	Nov-K Dec-L
c	Model code	57DHC (Made in Japan) 57DJC (Made in Malaysia) 57DKC (Made in China)					
d	Serial number						

* Example of indication of Serial label (S-label)

•Made in Japan

2J57DHC000125

means "manufactured in October 2012, 5.7" DH type,
C specifications, serial number 000125"

•Made in Malaysia

2J57DJC000125

means "manufactured in October 2012, 5.7" DJ type,
C specifications, serial number 000125"

•Made in China

2J57DKC000125

means "manufactured in October 2012, 5.7" DK type,
C specifications, serial number 000125"

Lower column: Model (13characters)

2) Location of Serial Label (S-label)

Refer to 3.2 "Outward Form".

2) Others

Bar code readability is excluded from quality assurance coverage.

4. Pin Assignment

4.1 Display Block

No.	Symbol	Function	
1	NC	OPEN.	
2	NC	OPEN.	
3	NC	OPEN.	
4	NC	OPEN.	
5	VGL	Negative supply for gate driver.	
6	C5M	Contacting terminal of capacitor for charge pump.	
7	C5P	Contacting terminal of capacitor for charge pump.	
8	VGH	Positive supply for gate driver.	
9	VVCOM	Voltage output for COMOUT.	
10	C4P	Contacting terminal of capacitor for charge pump.	
11	C4M	Contacting terminal of capacitor for charge pump.	
12	C3P	Contacting terminal of capacitor for charge pump.	
13	C3M	Contacting terminal of capacitor for charge pump.	
14	VSS	GND.	
15	VSS	GND.	
16	VDD2	Internal power supply.	
17	COMOUT	Square wave output for common-electrode.	
18	VDD	Power supply input.	
19	C2P	Contacting terminal of capacitor for charge pump.	
20	C2M	Contacting terminal of capacitor for charge pump.	
21	C1M	Contacting terminal of capacitor for charge pump.	
22	C1P	Contacting terminal of capacitor for charge pump.	
23	VSREF	Built-in DAC reference supply.	
24	COMDC	Common-electrode drive DC output.	
25	RVDD	Internal power supply.	
26	POCB	Power on clear. (Lo: active)	
27	MODE	Input specification selection input.

45	D10	Display data input for (G). 00h for black display D10:LSB D17:MSB Driver IC carries out gamma conversion internally.	Short to VSS.
46	D11		Short to VSS.
47	D12		Display data input for (G). 00h for black display D12:LSB D17:MSB Driver IC carries out gamma conversion internally.
48	D13		
49	D14		
50	D15		
51	D16		
52	D17		
53	D20	Display data input for (B). 00h for black display D20:LSB D27:MSB Driver IC carries out gamma conversion internally.	Short to VSS.
54	D21		Short to VSS.
55	D22		Display data input for (B). 00h for black display D22:LSB D27:MSB Driver IC carries out gamma conversion internally.
56	D23		
57	D24		
58	D25		
59	D26		
60	D27		
61	VCOM	Common-electrode driving signal.	

- Recommended connector: HIROSE ELECTRIC CO.,LTD. FH26 series [FH26-61S-0.3SHW(05)]
:KYOCERA Connector Products 6296 series [04 6296 461 93X 847+]
:JST FXZ series [61FXZ-RSM1-GAN-ETF]
 - Please make sure to check a consistency between pin assignment in "3.2 Outward Form" and your connector pin assignment when designing your circuit.
Inconsistency in input signal assignment may cause a malfunction.
 - Since FPC cable has gold plated terminals, gilt finish contact shoe connector is recommended.
- #### 4.2 Backlight Block

No.	Symbol	Function
1	BLH1	LED drive power source 1 (Anode side)
2	BLH2	LED drive power source 2 (Anode side)
3	BLL2	LED drive power source 2 (Cathode side)
4	BLL1	LED drive power source 1 (Cathode side)

- Recommended connector: KYOCERA Connector Products 6277 series [04 6277 004 001 883+]
- Please make sure to check a consistency between pin assignment in "3.2 Outward Form" and your connector pin assignment when designing your circuit.
Inconsistency in input signal assignment may cause a malfunction.
- Since FPC cable has gold plated terminals, gilt finish contact shoe connector is recommended.

4.3 Touch Panel Part

No.	Symbol	Function
1	XL	X-axis left terminal
2	YD	Y-axis down terminal
3	XR	X-axis right terminal
4	YU	Y-axis up terminal

- Recommended connector: KYOCERA Connector Products 6277 series [04 6277 004 001 883+]
- Please make sure to check a consistency between pin assignment in "3.2 Outward Form" and your connector pin assignment when designing your circuit.
Inconsistency in input signal assignment may cause a malfunction.
- Since FPC cable has gold plated terminals, gilt finish contact shoe connector is recommended.

5. Absolute Maximum Rating

VSS=0V

Item	Symbol	Condition	Rating		Unit	Applicable terminal
			MIN	MAX		
Supply voltage	VDD	Ta=25° C	-0.3	6.0	V	VDD
Input voltage 1 for logic	VI1		-0.3	VDD+0.3	V	POCB,CLK,VSYN,HSYN, D[27:20],D[17:10],D[07:00], MODE
Input voltage 2 for logic	VI2		-0.3	6.0	V	CS/STBY,DI/DE,SCK/REV
LED forward current	IL		--	70	mA	BLH1 - BLL1,BLH2 - BLL2
Touch Panel input voltage	VIT		--	7.0	V	XR,XL,YU,YD
Storage temperature range	Tstg		-30	80	°C	
Storage humidity range	Hstg	Non condensing in an environmental moisture at or less than 40° C90%RH.				

Note: Please set "Power-on" and "Power-off" sequences in accordance with the "standby sequence" described later.

6. Recommended Operating Conditions

VSS=0V

VSS=0V

Item	Symbol	Condition	Rating			Unit	Applicable terminal
			MIN	TYP	MAX		
Supply voltage	VDD		3.0	3.3	3.6	V	VDD
Input voltage 1 for logic	VI1	VDD=3.0~3.6V	0	--	VDD	V	POCB,CLK,VSYNC, HSYNC,D[27:20], D[17:10],D[07:00], MODE
Input voltage 2 for logic	VI2		0	--	VDD	V	CS/STBY,DI/DE, SCK/REV

Operating humidity range	Hop	Ta≤30° C	20	--	80	%	
		Ta>30° C	Non condensing in an environmental moisture at or less than 30° C80%RH.				

Note1: Common-electrode center voltage indicates that optimum VCOMDC value lies within the bound of these voltages, but it does not mean that the whole range of voltages are the optimum VCOMDC value.

This product must to be used with optimized VCOMDC value.

Note 2: This monitor is operatable in this temperature range. With regard to optical characteristics, refer to Item 10."CHARACTERISTICS".

			MIN	TYP	MAX		
Forward current	IL	Ta=25° C	--	(30)	70	mA	BLH1 - BLL1
Forward voltage	VL	Ta=25° C, IL=(30)mA	--	(15.0)	17.0	V	BLH2 - BLL2
Estimated Life of LED	LL	Ta=25° C, IL=(30)mA Note	--	(70,000)	--	hr	

Note: - The lifetime of the LED is defined as a period till the brightness of the LED decreases to the half of its initial value.

- This figure is given as a reference purpose only, and not as a guarantee.
- This figure is estimated for an LED operating alone.

As the performance of an LED may differ when assembled as a monitor together with a TFT panel due to different environmental temperature.

- Estimated lifetime could vary on a different temperature and usually higher temperature could reduce the life significantly.

7.1.3 Touch Panel

Note1: This is recommended spec to get high quality picture on display. It is customer's risk to use out of this frequency.

Note2: When Vertical Back Porch is "0", please use odd number for the setting of the total number of lines that compose one field.

Note3: When DE keeps "Lo" for 21H and 77CLK or longer, start capturing data automatically from "22H and 78CLK".

8.2 Serial Communication

Serial communication control block in the LCD monitor is described below.

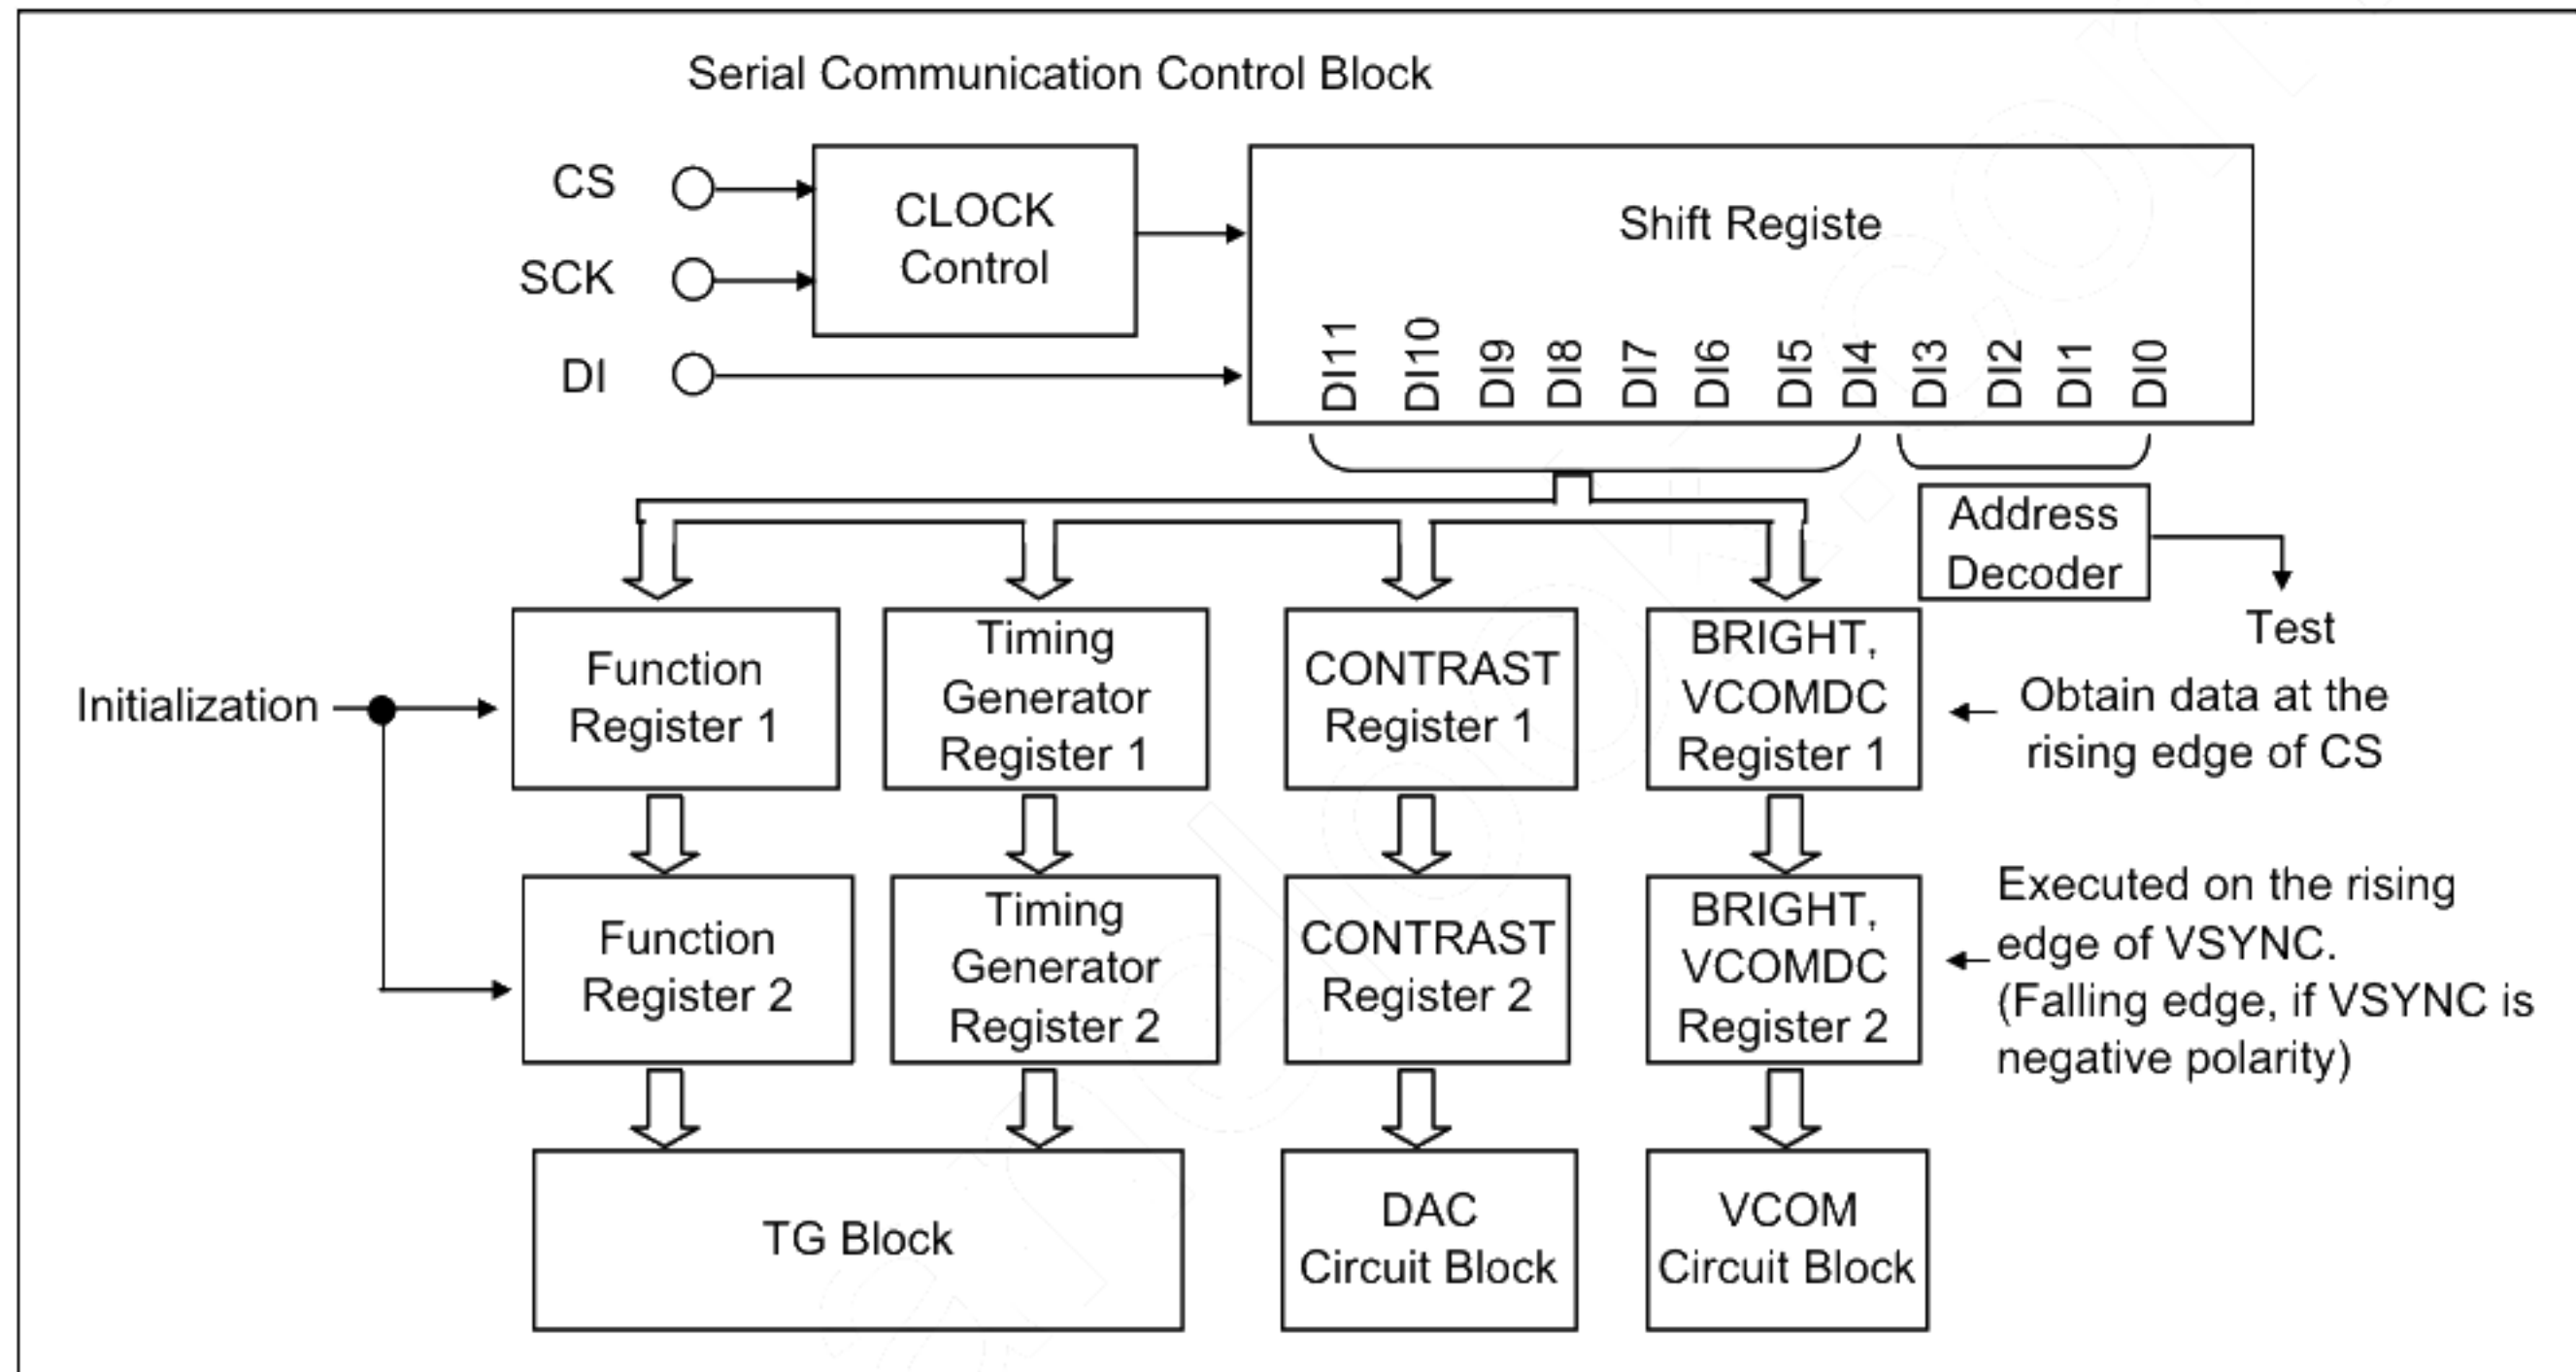

Serial communication control function is effective at "MODE" = "VSS".

8.2.1 Feature Description

Serial communication control block is consist of registers that store data entered from CS, SCK, DI terminals and DAC that outputs control voltages to each part according to the data loaded from these registers .

All registers are set to initial values at power-on.

Electrostatics or noises may re-set the registers to improper values. It is advisable to set up serial communication as frequently as possible as liquid crystal could degrade if such state is left untreated for a long time.

8.2.2 Serial Communication Timing

After input signal of CS drops from Hi to Lo, the Shift Register loads 12 bits of serial data from DI at the rising edge of the input signal of SCK.

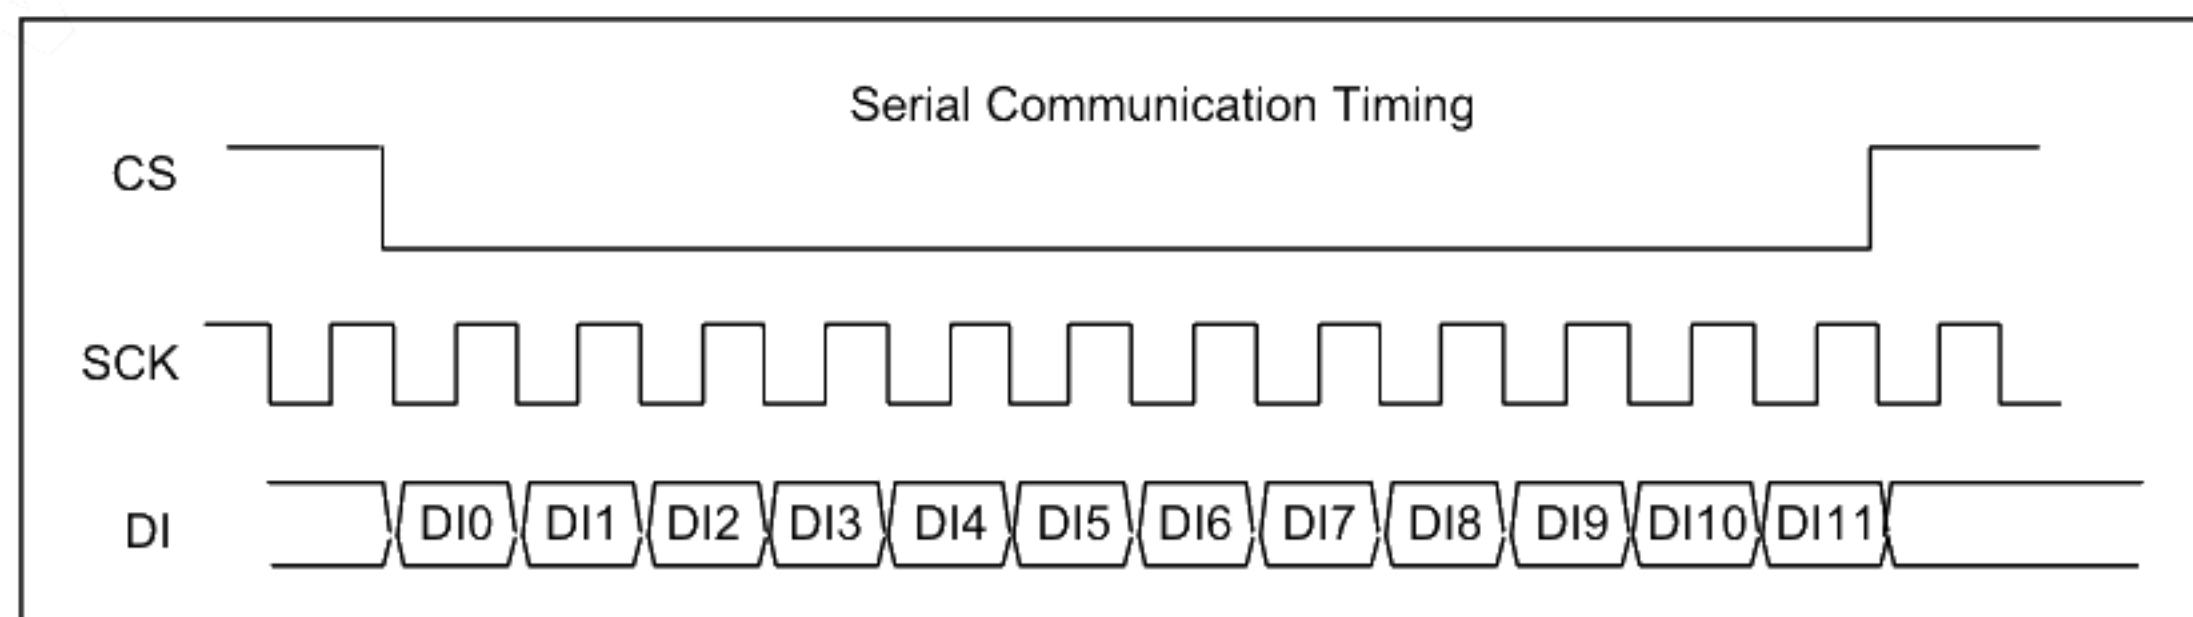

Mode register and DAC register load the stored data at the rising edge of the input signal of CS.

When loaded DI data during the low period of CS is less than 12 bits, all loaded data are discarded .

When loaded DI data during the low period of CS is 12 bits or more, the last read of 12 bits is used .

Each command is executed by VSYNC immediately after the rising the edge of CS.

Serial Communication Control Block is configurable at any time during display and standby mode as it is completely independent from other circuitry run by CLK in the monitor.

Please fix DI4, DI9 through DI11 of the FUNC1 registers to "0".

Please fix DI7 of FUNC2 to "1", DI8 and DI9 of FUNC2 to "0". DI10 and DI11 are no connection.

Please fix DI4 and DI5 of FUNC3 to "0".

Please fix DI4 of FUNC4 to "1".

-User Setting Values

Please use "User setting values" to set up PANEL1 through PANEL9, DI4, DI9 through DI11 of FUNC1, DI7 through DI9 of FUNC2, DI4, DI5 of FUNC3 and DI4 of FUNC4.

Use of unspecified values may cause malfunction.

8.2.4 Detailed Description of Function

(1) Bright Control (BRIGHT)

Bright setting values is controlled by 6 bit (DI6 through DI11) of BRIGHT registers.

The display lightens in proportion to data value while VLCD changes inversely with the data value.

Initial value of BLACK[00h] is 3.73V and WHITE[FFh] is 0.55V

when the CONTRAST register is Eh.

The amount of change in VLCD is 0.02V per LSB.

Recommended Operating Range

The register shall be set in 00h to 2Eh range.

(Typ.)

BRIGHT[5:0]	VLCD(BLACK)	VLCD(WHITE)
00h	4.25V	1.07V
01h	4.23V	1.05V
~	~	~
1Ah	3.73V	0.55V
~	~	~
2Dh	3.35V	0.17V
2Eh	3.33V	0.15V

Recommended operating range

(2) Common Electrode Center Voltage (VCOMDC)

Common-electrode center voltage is controlled by 6-bit (DI6 through DI11).

The voltage is proportional to data values. Each TFT monitor has to be optimized to its own optimum value separately. This optimization is mandatory. If not implemented, liquid crystal of TFT monitor will be degraded by long operation.

Initial value of VCOMDC is 2.30V.

Amount of change in VCOMDC is 0.02V per LSB.

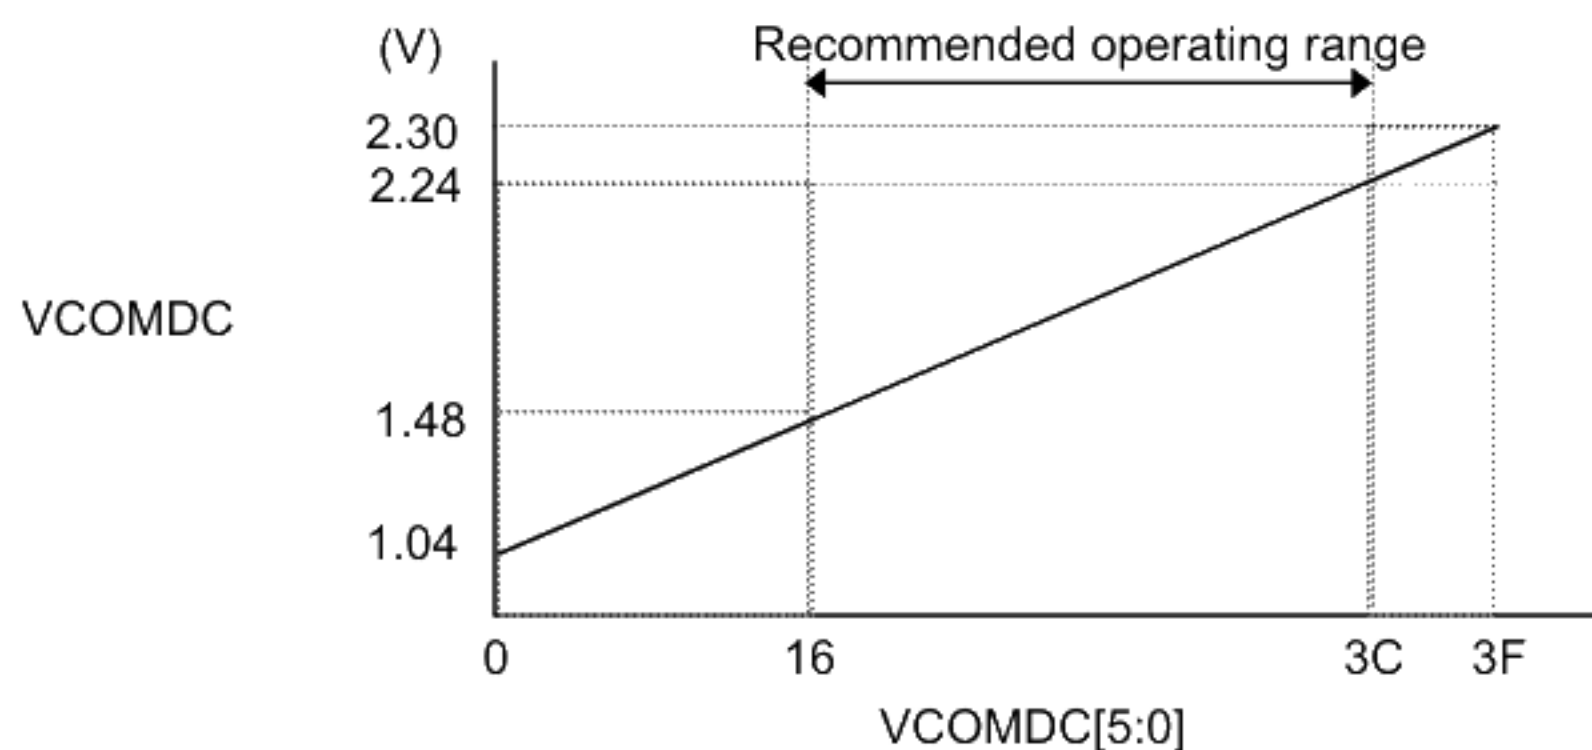

Recommended Operating Range

Since VCOMDC has its optimum value somewhere between 1.48V and 2.24V, the register should be set in 16h to 3Ch range.

(Typ.)

VCOMDC[5:0]	VCOMDC (V)
00h	1.04V
~	~
15h	1.46V
16h	1.48V
~	~
3Ch	2.24V
~	~
3Fh	2.30V

Recommended operating range

(3) Contrast Control (CONTRAST)

Contrast is controlled in 16 levels by 4-bit (DI4 through DI7) CONTRAST register.

Contrast is proportional to data values.

Contrast does not affect aforementioned bright control.

Initial value of Contrast is 3.18V.

Amount of change in contrast is 0.12V per LSB.

(Typ.)

CONTRAST[3:0]	VLCD(BLACK)-VLCD(WHITE)
0h	1.50V
~	~
Eh	3.18V
Fh	3.30V

(4) Panel Setting 1 (PANEL 1)

PANEL 1 register 3-bit (DI9 and DI11) can select operating conditions from 8 choices.

Please set this register to these values.

DI9	DI10	DI11
0	0	1

(5) Vertical Flyback Time Set (VDISP)

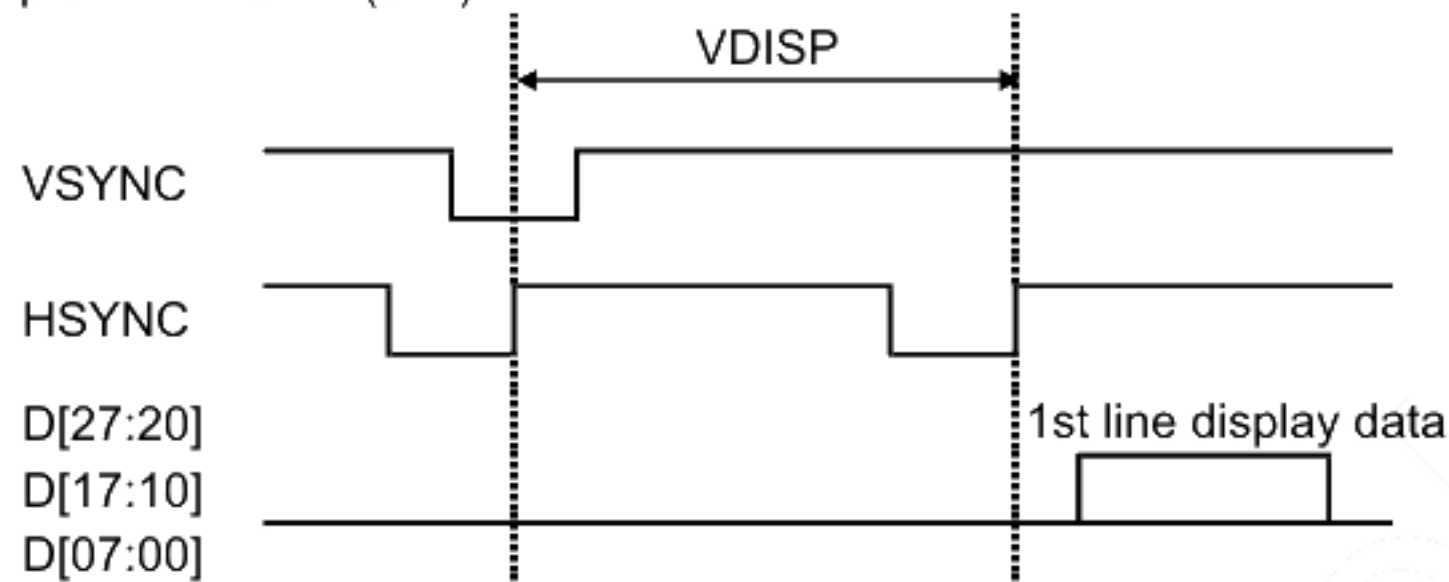

The length of vertical fly back period can be set from 0 to 31H by 5-bit of DI4 through DI8 of VDISP register. When VSYNC and HSYNC are negative polarity, "Lo" period of VSYNC is detected at the rising edge of HSYNC. The setting value of VDISP is determined by the number of horizontal periods from the first detection of VSYNC=Lo to the first line's display data input. Please set VDISP=1 as shown in "Example 1" even if the display data of the first line is input

When the pulse width of VSYNC extends over two or more H as shown in "Example 3", the setting value is determined by the number of horizontal periods from the first detection of VSYNC=Lo to the first line's display data input.

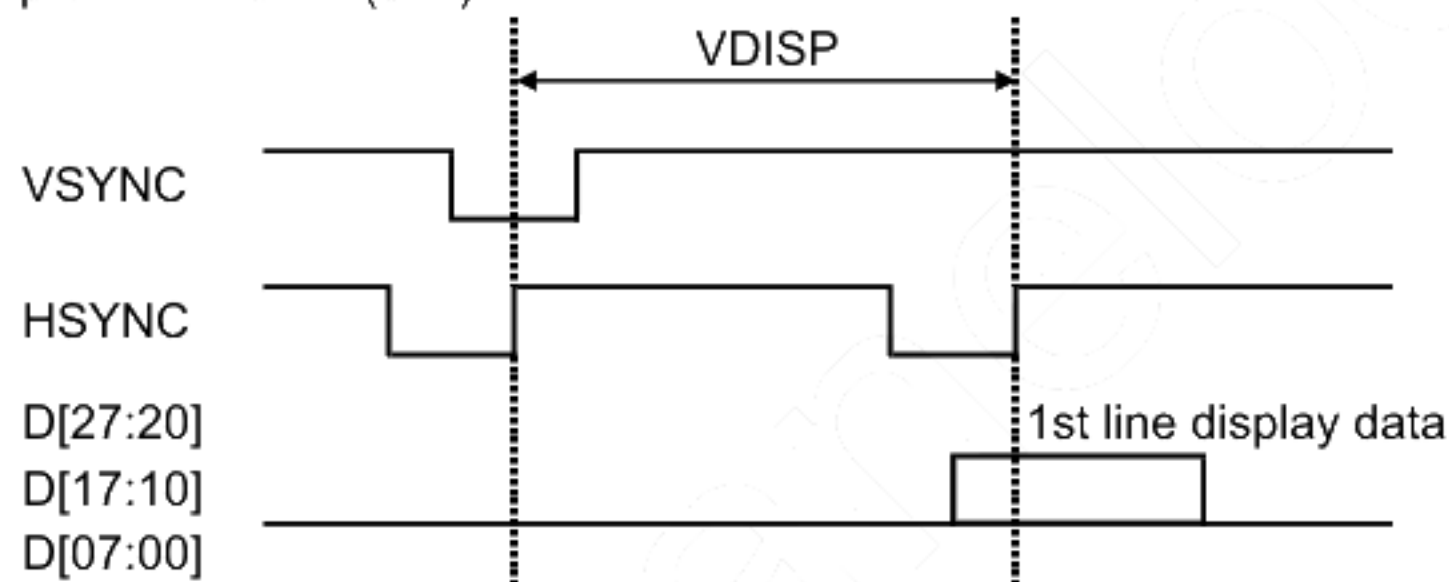

When the initial value is "0", the first line's display data needs to be inputted immediately after VSYNC as shown in "Example 4".

When VDISP=0, please use odd number for the setting of the total number of lines that compose one field. This function can also be used for vertical display range setup (Vertical position setup).

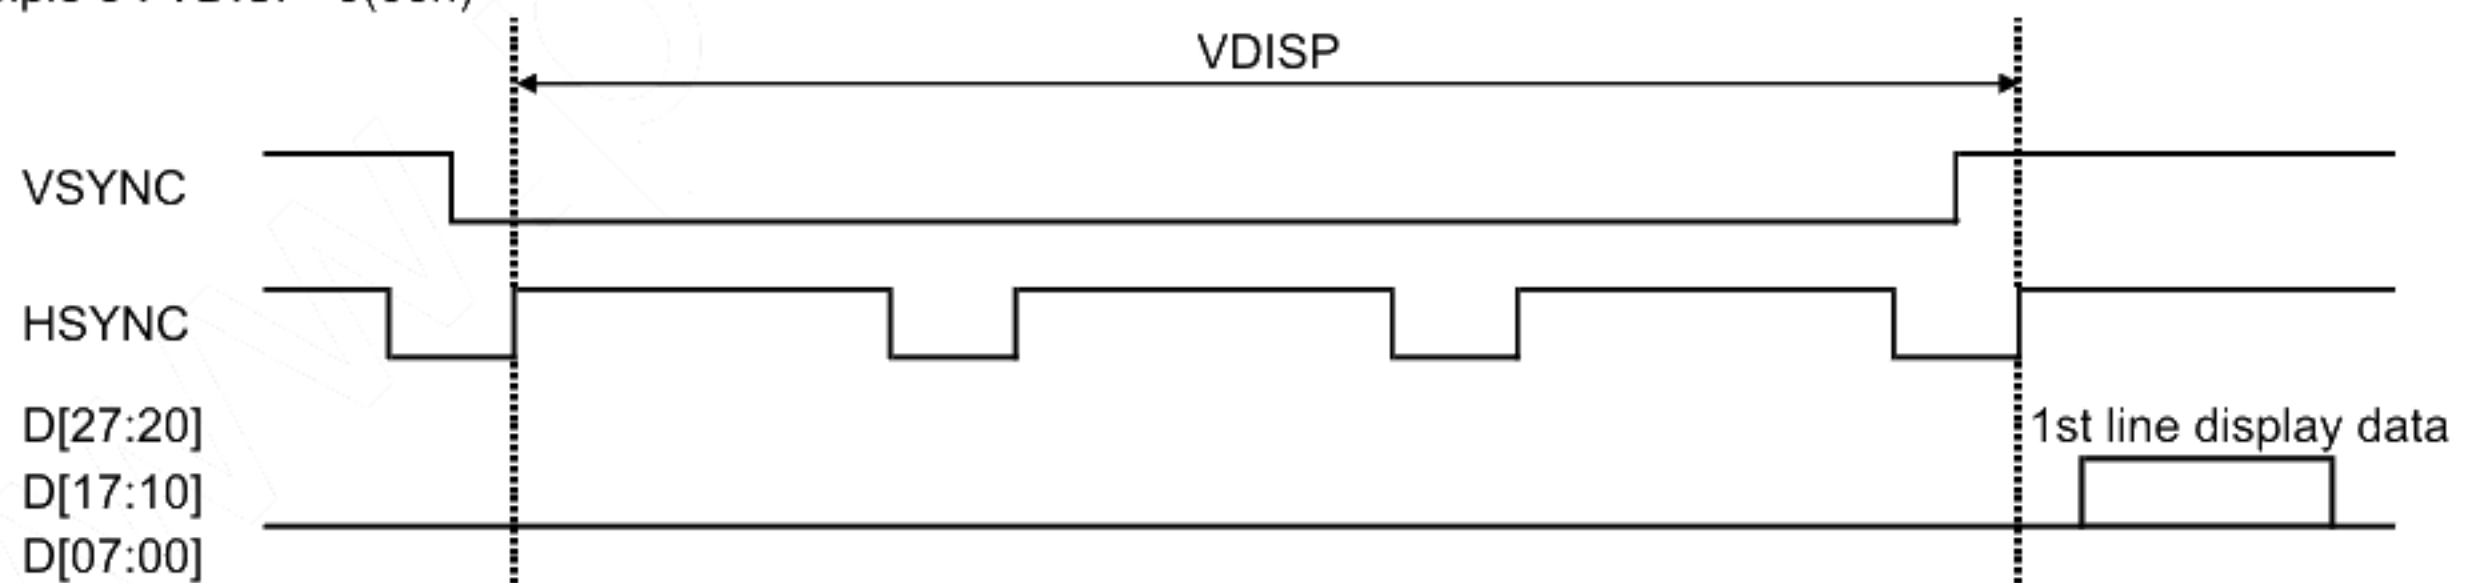

Example 1 : VDISP=1(01h)

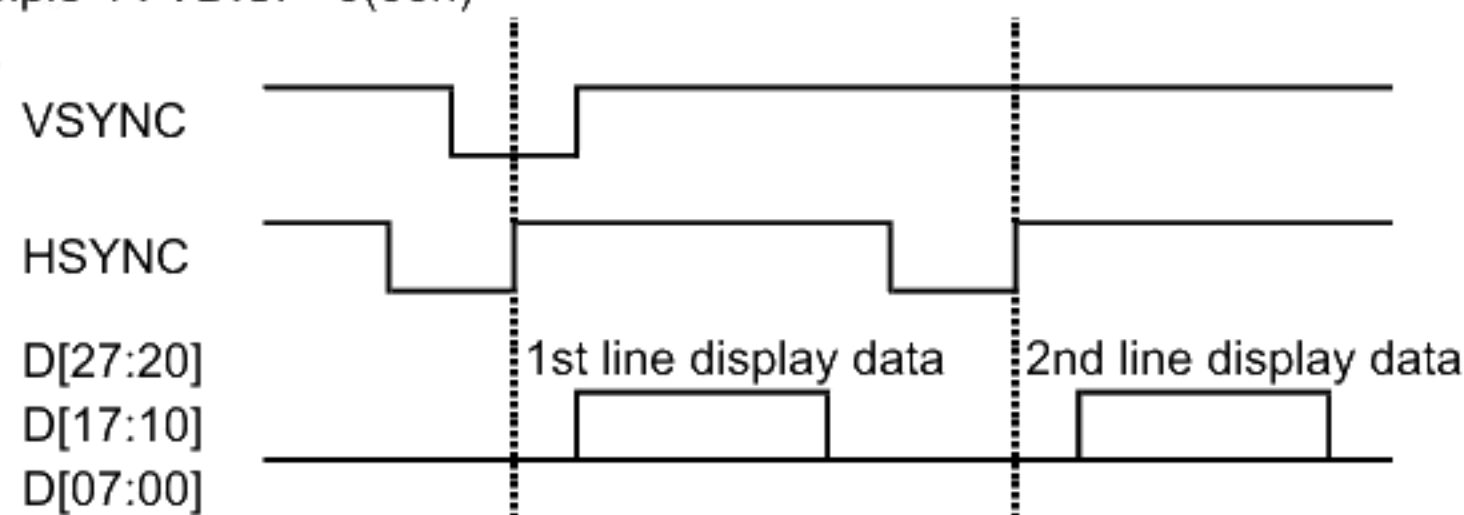

Example 2 : VDISP=1(01h)

Example 3 : VDISP=3(03h)

Example 4 : VDISP=0(00h)

(6) Panel Setting 2 (PANEL2)

PANEL 2 register 3-bit (DI9 and DI11) can select operating conditions from 8 choices.
Please set this register to these values.

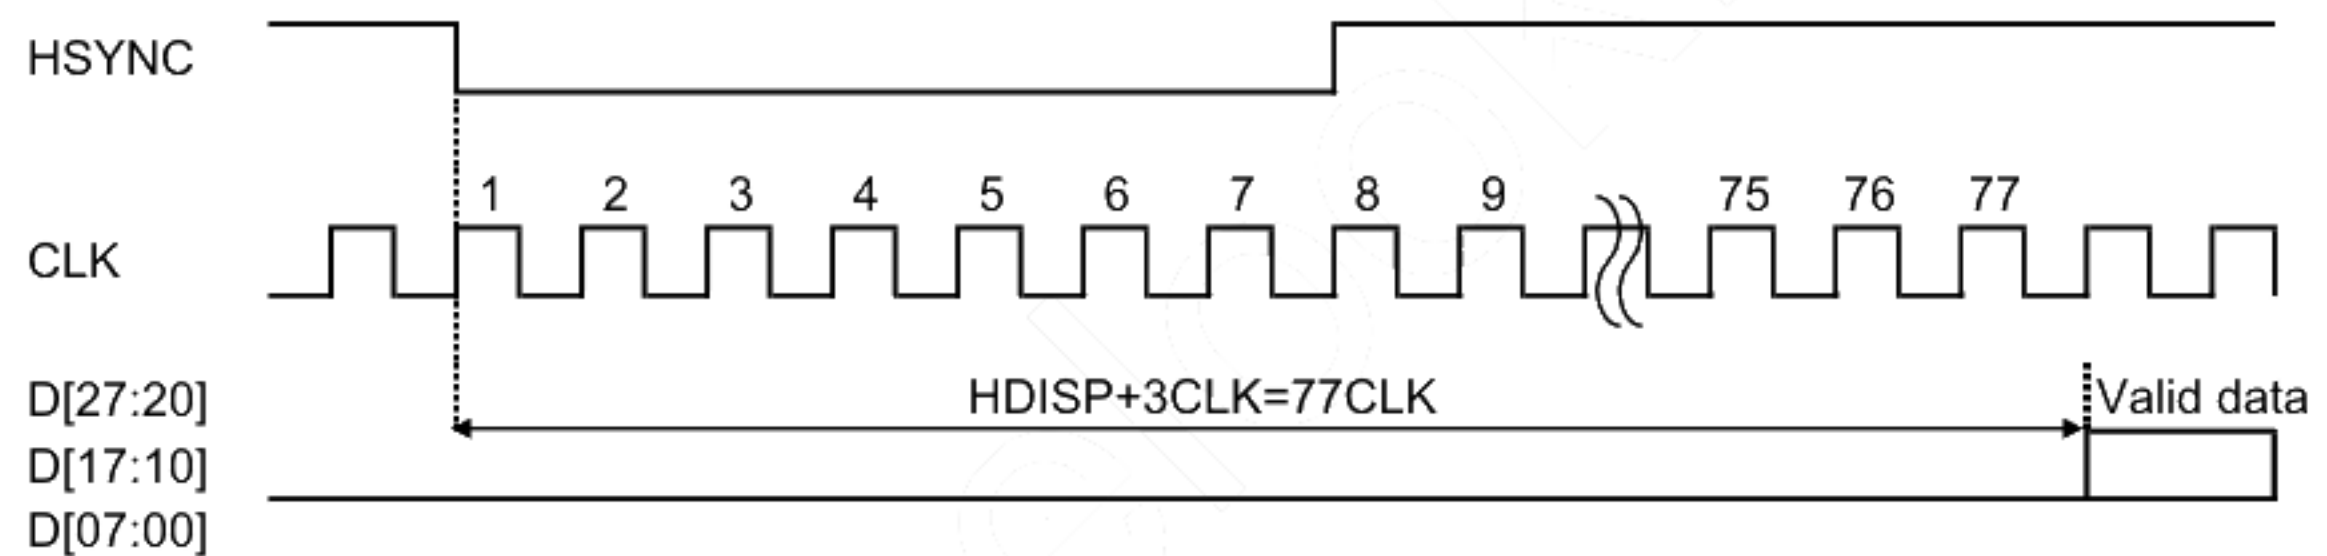

DI9	DI10	DI11
0	0	0

(7) Horizontal Flyback Period Setting (HDISP)

Horizontal flyback time can be set from 5 to 258CLK by HDISP register with 8-bit of DI14 thru DI11.
However, set value of 0 or 1 is prohibited. Actual flyback time is "setting value plus 3CLK".
When initial value is 74, a data after a lapse of $74 + 3\text{CLK} = 77\text{CLK}$ from the rising edge of HSYNC is displayed as shown in the following chart.

This function can also be used for horizontal display range setup (Horizontal position setup).

Example : HDISP=74(4Ah)

(8) Panel Setting 3 (PANEL3)

Select operating condition of the signal generated by driver IC in accordance with 8-bit of DI4 to DI11 of PANEL 3 register.

Please set this register to these values.

DI4	DI5	DI6	DI7	DI8	DI9	DI10	DI11
0	1	0	0	1	1	0	0

(9) Function Set 1 (FUNC1)

FUNC1 register sets and controls the following functions by its each bit of DI5,DI6,DI7 and di8.

- Vertical Flip Display (Up/Down)

DI5=0 for normal display, DI5=1 for vertical flip display

After completing the setup by serial communication, the selected display mode is carried out by VSYNC.
(Normal display is defined when FPC of the monitor is place downside.)

- Horizontal Flip Display (Right/Left)

DI6=0 for normal display, DI6=1 for horizontal flip display

The selected display mode is executed at VSYNC after setup by serial communication.

(Please refer to the section 8.3 for Display Data Transfer)

- Backlight Control

DI7 switches the backlight driver IC. BLON terminal outputs set value of DI7.

Since its output level is VDD or VSS, this function can also be used for other controls than the backlight.

After completing the setup by serial communication, the selected display mode is carried out by VSYNC.

- Standby Mode

DI8=0 for standby mode, DI8=1 for normal operation

Since default value of DI8 after power on is "0", it automatically goes to standby mode.

Power consumption is significantly reduced in standby mode by disabling the timing generator and the LCD driving circuitry, and disconnecting current lines.

No image is displayed (white raster display) during standby mode unless DI8 is set to 1 for normal operation by serial communication. Serial data can be received by serial communication block even in standby mode.

Please refer to the section 8.4 "Standby (Power save) Sequence" for standby mode and power on/off sequence.

When normal operation is switched to standby mode, afterimage treatment is carried out before switching to standby mode.

(10) Function Set 2 (FUNC2)

FUNC2 register sets and controls the following functions by its each bit of DI4 thru DI6.

- HSYNC, VSYNC, CLK Polarity Switching

Polarity of HSYNC is switched by DI4. DI4=0 for positive polarity input, DI4=1 for negative polarity input.

Polarity of VSYNC is switched by DI5. DI5=0 for positive polarity input, DI5=1 for negative polarity input.

Polarity of CLK is switched by DI6. DI6=0 for non-inversion, DI6=1 for inversion.

Initial value of DI4, DI5 and DI6 are "1". The following chart shows polarity of each signal at the initial value. Please set change of VSYNC, HSYNC and display data at the rising edge of CLK.

Polarity of each signal can be changed independently by logic of DI4, DI5 and DI6.

Example 1 : DI4=0, DI5=DI6=1 (HSYNC has positive polarity and Hi active)

Example 2 : DI4=1, DI5=0, DI6=1 (VSYNC has positive polarity and Hi active)

Example 3 : DI4=DI5=1, DI6=0 (CLK is reversed, data is read at the rising edge of CLK.)

(11) Function Set 3, 4 (FUNC 3, 4)

- Gamma Curve Correction Select

DI5=0 of FUNC 4 Register: Deactivate user configurable gamma correction circuitry.
Use built-in gamma curve.

DI5=1 of FUNC 4 Register: Activate user configurable gamma correction circuitry.
Use user configurable gamma correction curve.

- Setting Method of User Configurable Gamma Correction Curve

Gamma curve can be corrected by using GM1[2:0] thru GM4[2:0] registers of FUNC 3 and FUNC 4.
GM1 thru GM4 corrects each following gamma potential respectively.

GM1[2:0] → Input data D[*7:*0] = Register for gamma potential correction at 192(=C0h)

GM2[2:0] → Input data D[*7:*0] = Register for gamma potential correction at 148(=94h)

GM3[2:0] → Input data D[*7:*0] = Register for gamma potential correction at 108(=6Ch)

GM4[2:0] → Input data D[*7:*0] = Register for gamma potential correction at 64(=40h)

Below chart shows characteristic curve of gray scale input data - liquid crystal applied voltage.

Input value of "0" is assumed to be 0% of applied voltage to liquid crystal, and input value of "225" is assumed to be 100% of applied voltage to liquid crystal. Adjustable range of GM1 thru GM4 registers are described below.

	GM4[2:0]	GM3[2:0]	GM2[2:0]	GM1[2:0]
00h	No correction	No correction	No correction	No correction
01h	54.5%	66.7%	75.8%	84.8%
02h	51.5%	63.6%	72.7%	81.8%
03h	48.5%	60.6%	69.7%	78.8%
04h	45.5%	57.6%	66.7%	75.6%
05h	42.4%	54.5%	63.6%	72.7%
06h	39.4%	51.5%	60.6%	69.7%
07h	36.4%	48.5%	57.6%	66.7%

When no correction is made to gamma potential of GM1 to GM4;

The voltages at "0" and "255" are fixed in accordance with the contrast and brightness settings, and voltages at 1 to 254 are determined by resistor split ratio produced by the driver IC built-in gamma curve resistor. (Refer to the chart in previous page)

Liquid crystal applied voltage takes the values of 45.7%, 58.5%, 66.4% and 74.8% when input data is 64, 108, 148 and 192 respectively.

When correction is made to any of GM1 to GM4 by user;

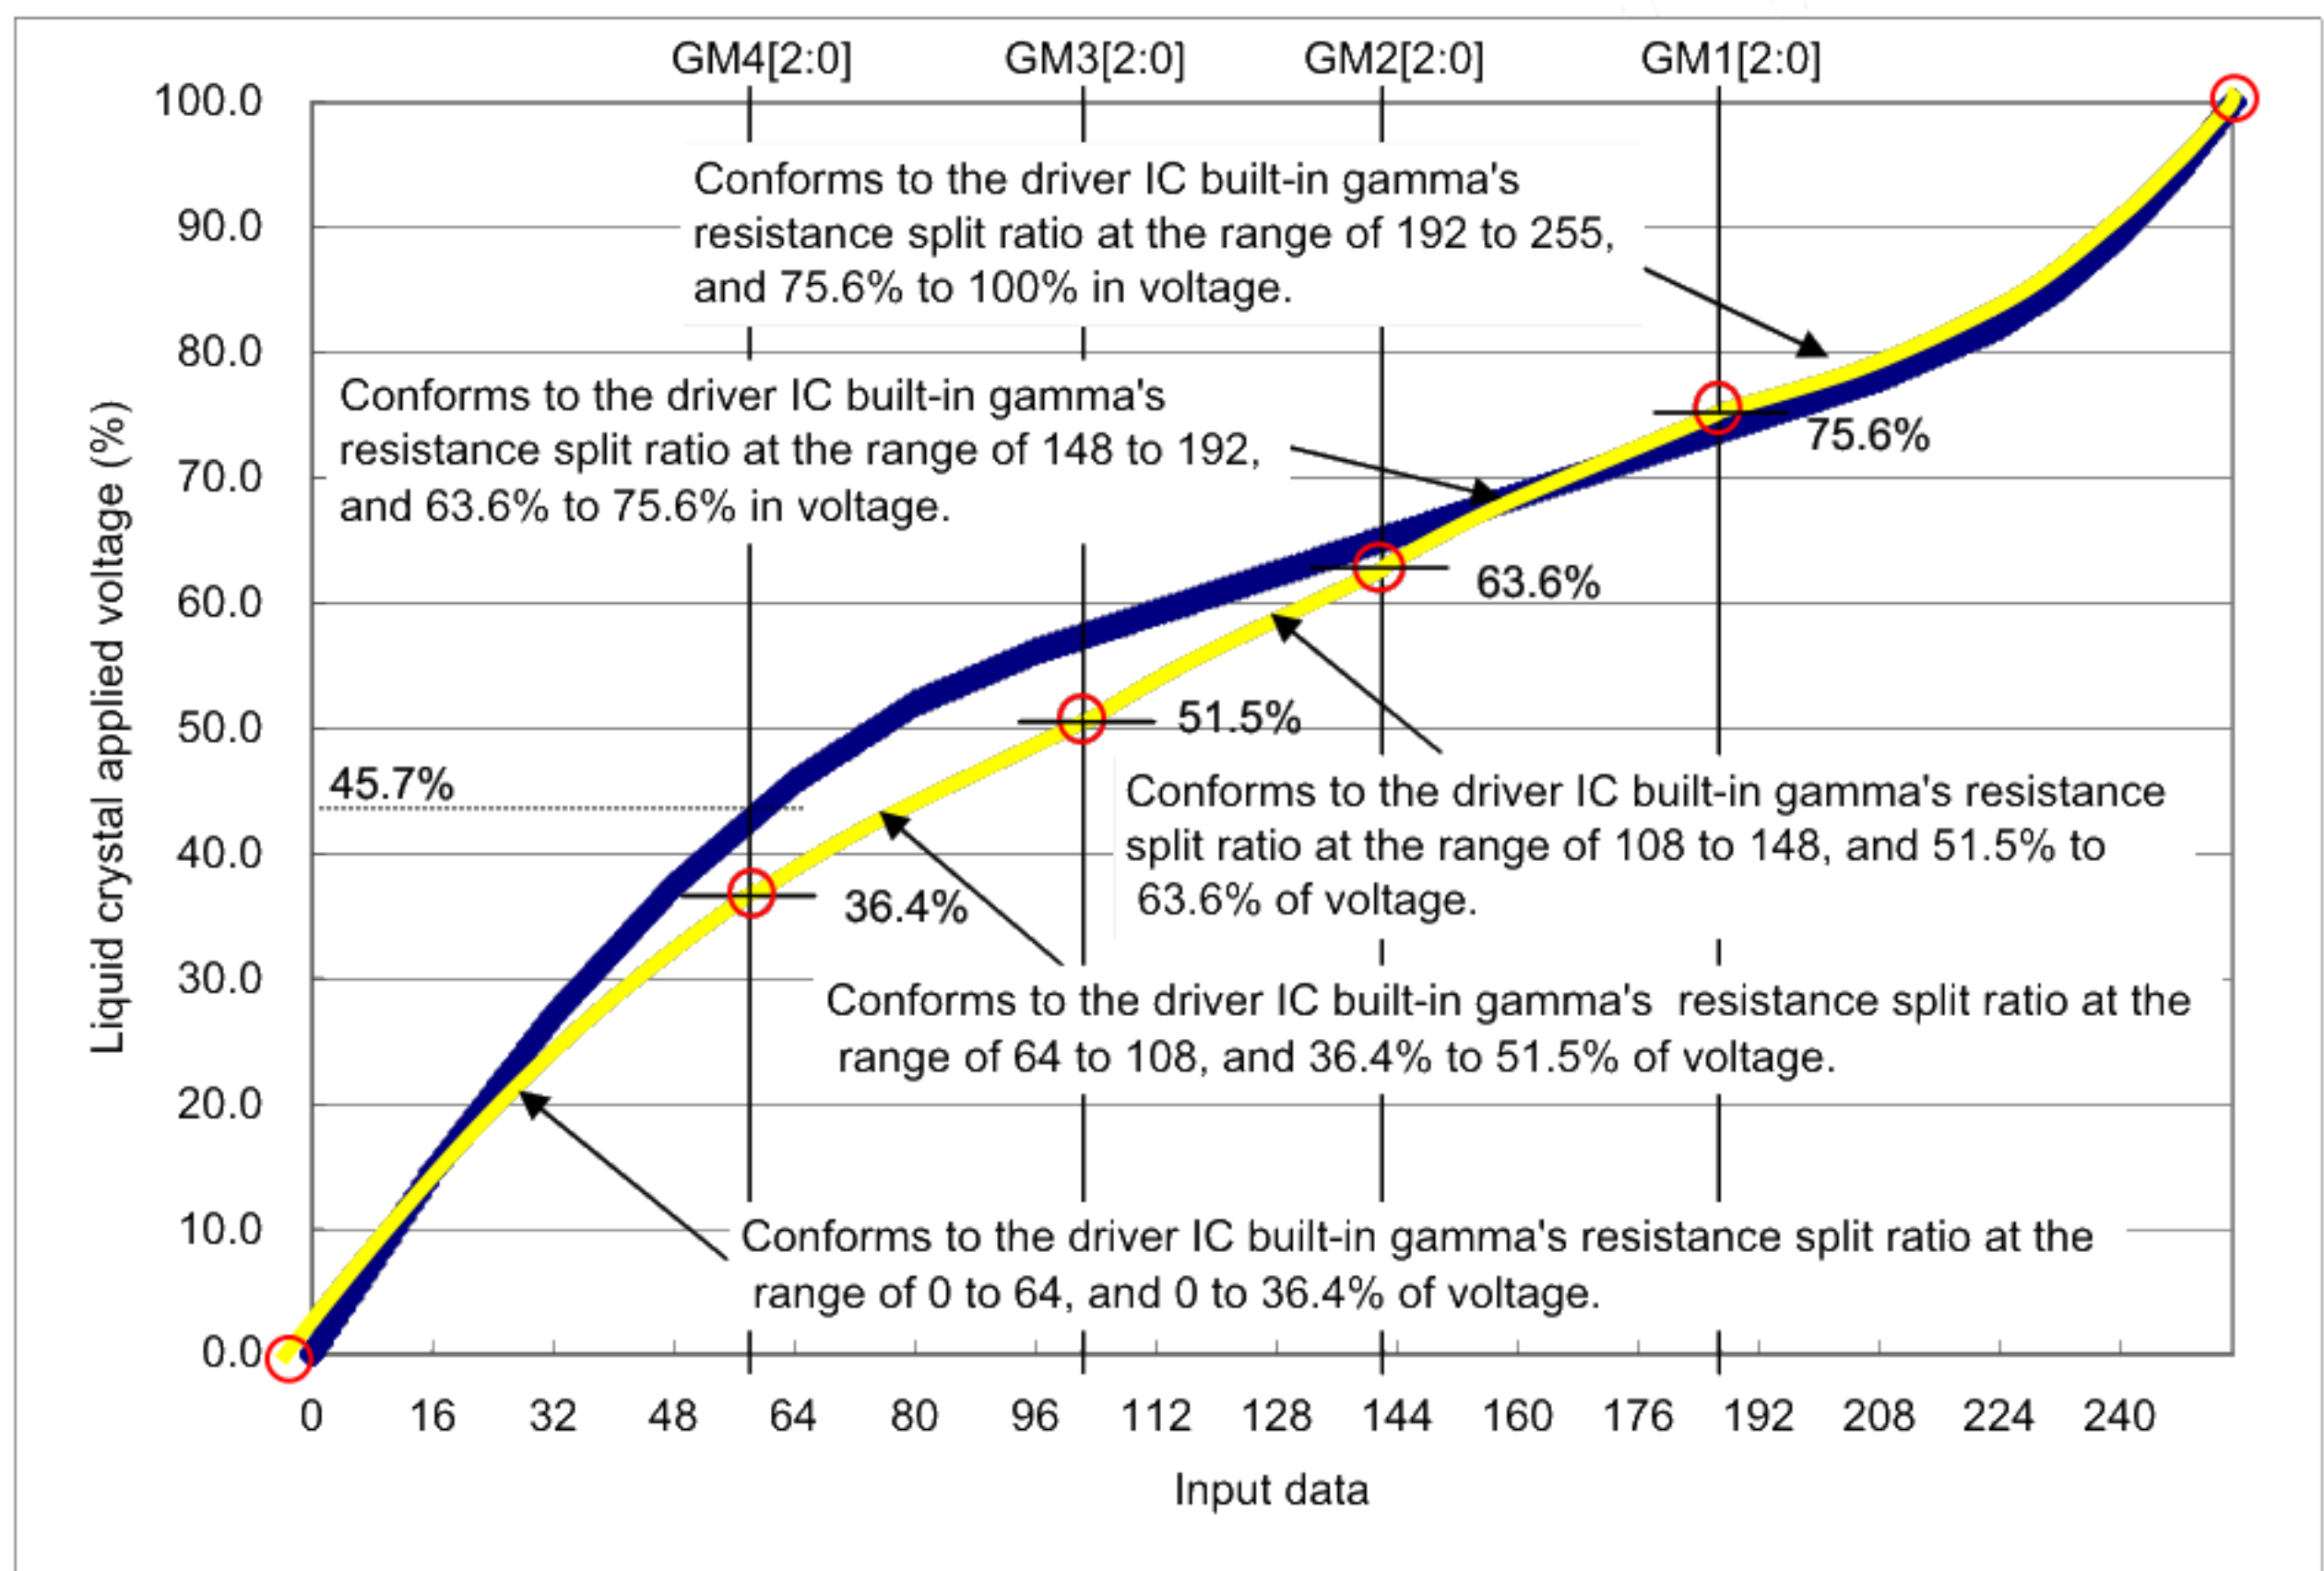

The voltage is corrected in accordance with a correction point and its set value configured by user.

The voltages at 1 to 254 are determined by resistor split ratio between voltage at 0 and 225 and input data.

Example:

Darken gray scale in black side.

- Change liquid crystal applied voltage at the 64 point to darken side.
- Set GM4[2:0] to 7h, GM3[2:0] to 6h, GM2[2:0] to 5h and GM1[2:0] to 4h.

8.3 Display Data Transfer

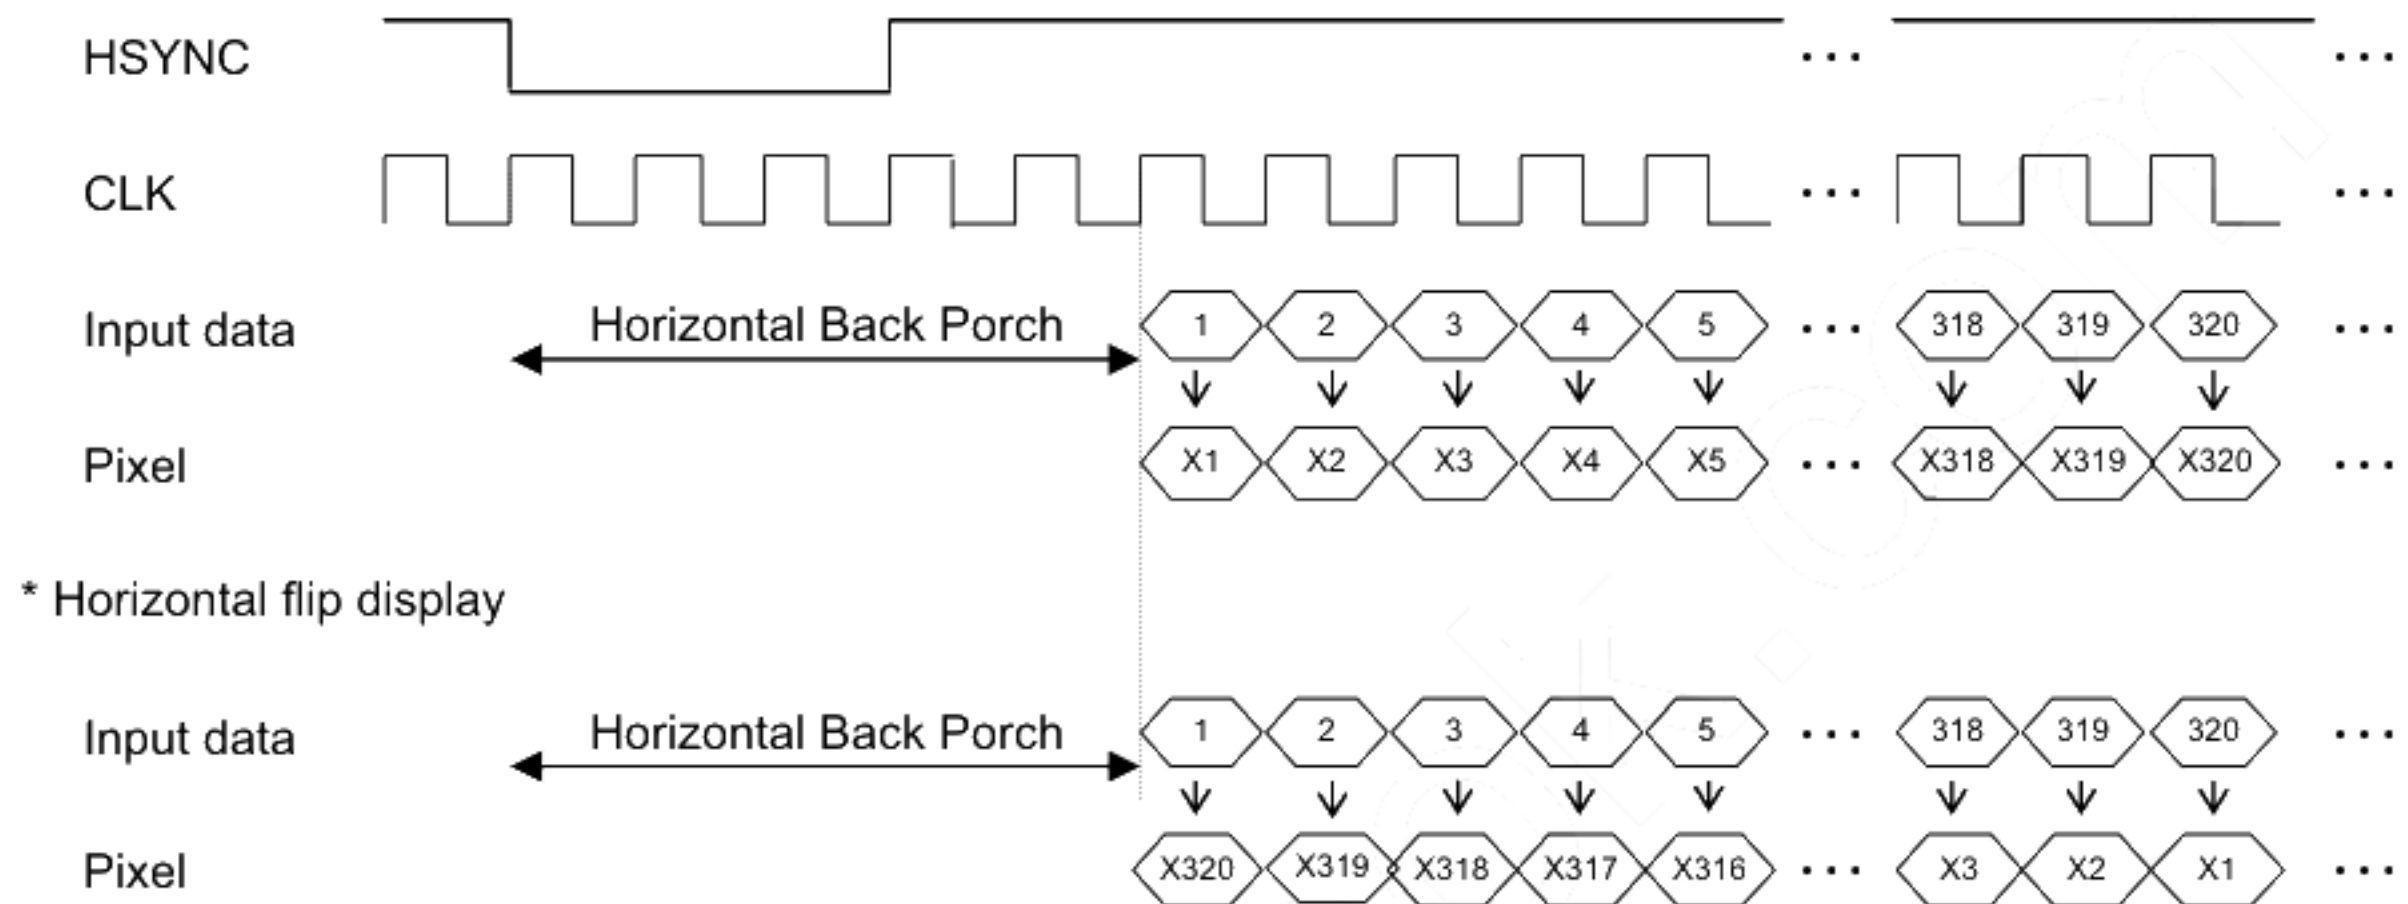

Input display data to D[27:20], D[17:10], D[07:00]. D*0 : LSB, D*7 : MSB

- Horizontal Timing and Order of Input Data

Display data shall be input in synchronization with CLK.

Polarity of CLK can be selected by DI16 of FUNCTION SET 2 (FUNC2).(at "MODE" = "VSS")

Normal display: Normal display is defined as the orientation that the FPC cable on the TFT monitor is placed on the downside.

* Above timing chart shows correlation between input data and pixels in visual way and it is not actual timing chart.

- Vertical Timing and Order of Input Data

Transfer of display data that consist of 240 lines in 1 field is explained below.

The correlations between input line and display line at normal display and vertical flip display are described below.

Normal display: Normal display is defined as the orientation that the FPC cable on the TFT monitor is placed on the downside.

* Above timing chart shows correlation between input data and pixels in visual way and it is not actual timing chart.

8.4 Standby (Power Save) Sequence

When "MODE" = "VSS", serial communication signals of CS, DI and SCK shall be input after VDD stabilizes at $VDD \geq [0.9 \times VDD]V$ for more than 20 msec or more after power on.

All initial values of serial data shall be set during this standby mode.

Other logic input signals of HSYNC, VSYNC, D[27:20], D[17:10], D[07:00] and CLK shall be input simultaneously after power on (specified period marked ① in next page). All input signals shall be set to a fixed DC to reduce power consumption during standby mode.

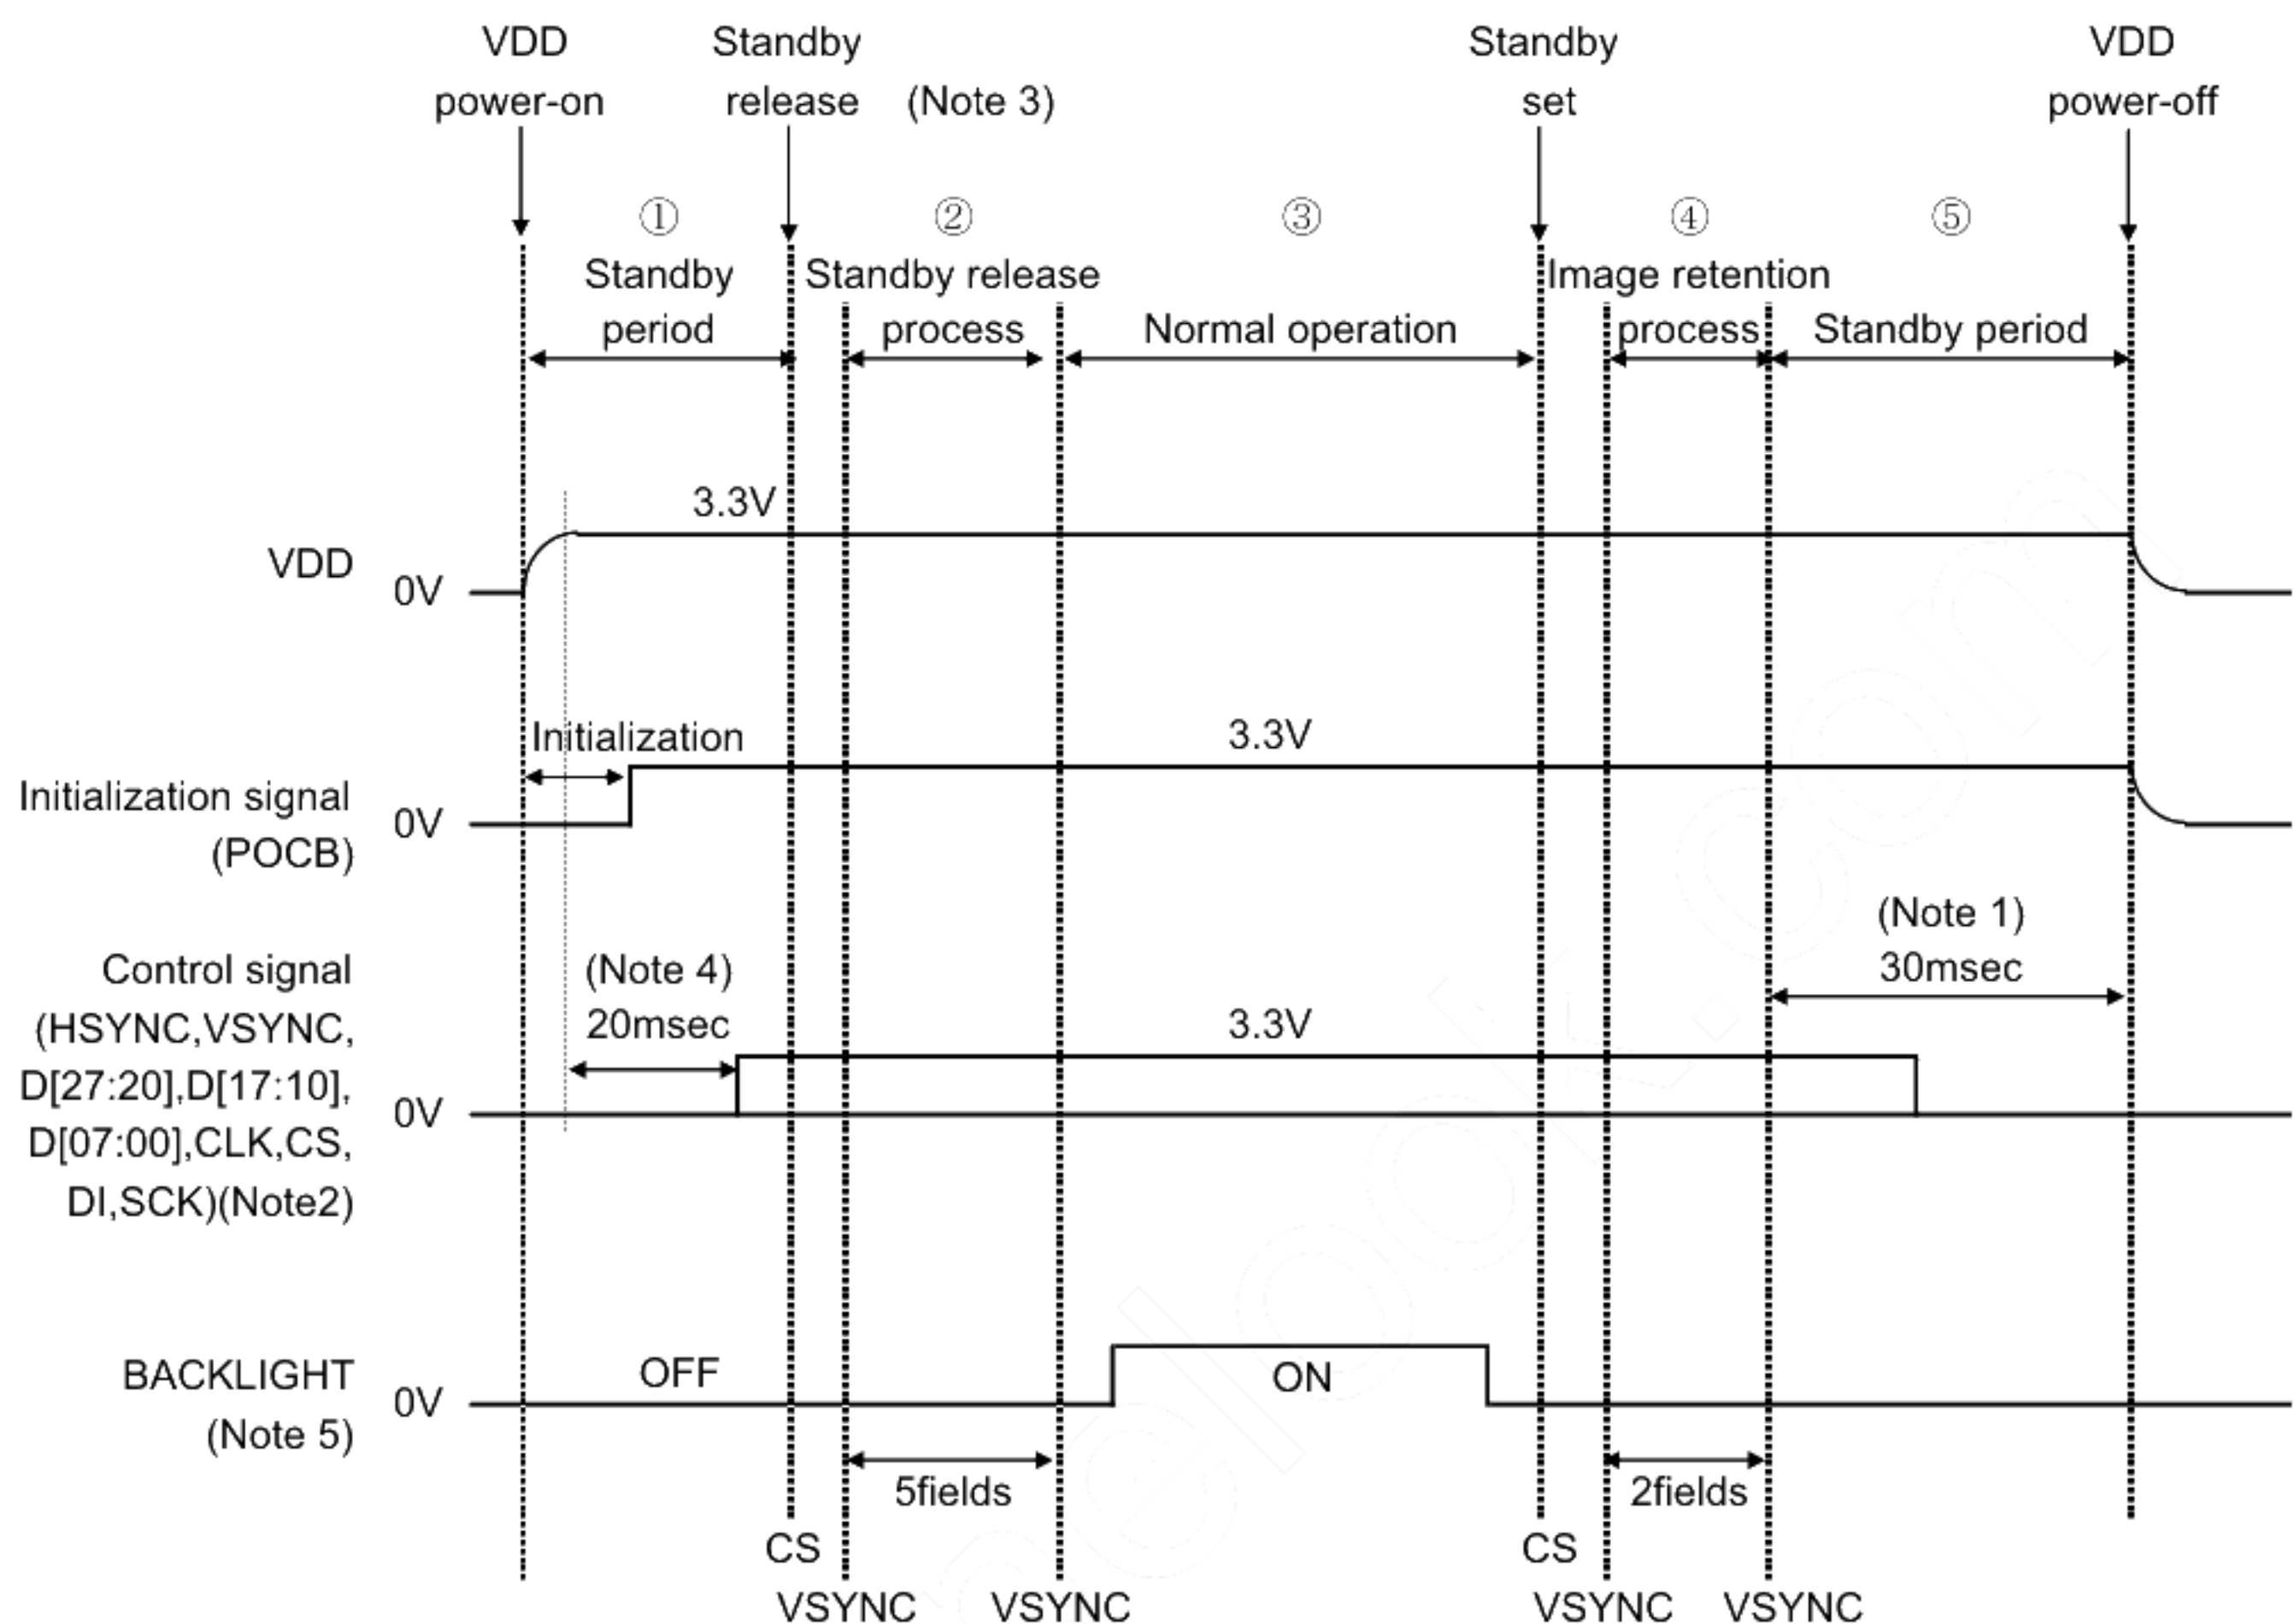

Please follow the recommended power on/off sequence described below.

- ① Right after power on, serial communication registers are initialized.
Therefore, standby control bit takes the value of "0".
By this procedure the LCD goes into standby mode which significantly reduces power consumption of the LCD.
No image is displayed (white raster display) on the screen and internal power circuit is deactivated during standby mode.
Sync signal and display data (HSYNC, VSYNC, D[27:20], D[17:10], D[07:00], CLK) start to input before standby mode is released by serial communication.
- ② When the standby control bit is set to "1" by serial communication or the terminal "STBY" turn to "Lo" from "Hi", the standby mode is released by following VSYNC and the power supply circuit of building into begins operating.
No image is displayed (white raster display) on the screen for 5 fields from the following VSYNC after the release of standby mode.
- ③ LCD goes into normal display (display under normal operation) at the timing of VSYNC after completion of the procedure described in ②. Backlight shall be lit up 1 or more field after going to normal display.
- ④ Standby mode can be established by setting standby control bit to "0" by serial communication or the terminal "STBY" turn to "Hi" from "Lo".
Display data is changed to FFh at VSYNC that comes right after this serial communication, and afterimage treatment is performed for 2 fields of VSYNC. Displayed image under normal display is immediately changed to white raster display by this treatment.
Continue to input sync signal (HSYNC, VSYNC, CLK) during this period.
- ⑤ LCD goes into standby mode, which is same as ① above, at the timing of VSYNC after completion of the procedure described in ④. Serial communication data is retained during standby mode.
Serial communication signal and input signal can be deactivated.

② to ④ repeats same procedures as described above.

Below procedure must be followed for power-off.

- ① Implement standby setting.
- ② After standby setting, continue to input sync signals (HSYNC, VSYNC, CLK) during the image treatment period (until VSYNC after 2 fields subsequent to standby setting).
- ③ After ②, power off VDD after 30msec or more.
- ④ Stop the sync signals (HSYNC, VSYNC, CLK) subsequent to afterimage treatment period and no later than VDD off.

Note 1: Power off VDD more than 30 msec after VSYNC that arrives 2 fields from standby set.

Note 2: Input CLK during the period of inputting sync signals (HSYNC, VSYNC) and display data D[27:20], D[17:10], D[07:00].

Note 3: Due consideration needs to be given to power supply capacity as bigger current (inrush current) flows at standby release.

Note 4: Serial communication signals should be input after VDD stabilizes at $VDD \geq [0.9 \times VDD]V$ for more than 20 msec. And initial values of all serial data should be set during this period before standby release.

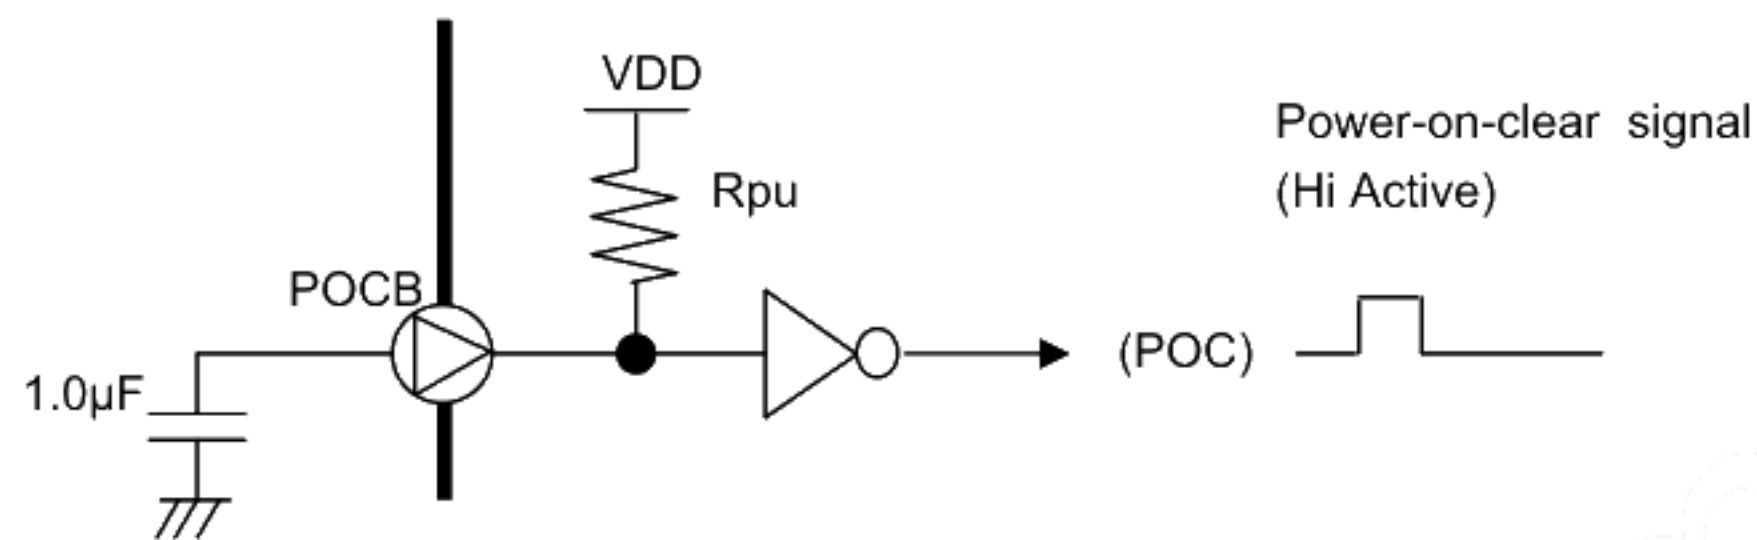

Note 5: Backlight should be turned on after 5 field from starting display. Backlight should be turned off before standby is set.

Voltage values shown in this chart are typical values, not fixed values.

8.5 Power On Sequence

There is the following limit between a power on period and the serial communication setting.

Power-on-clear circuit diagram

POCB terminal is connected to VDD through the pull-up resistor (R_{pu}).

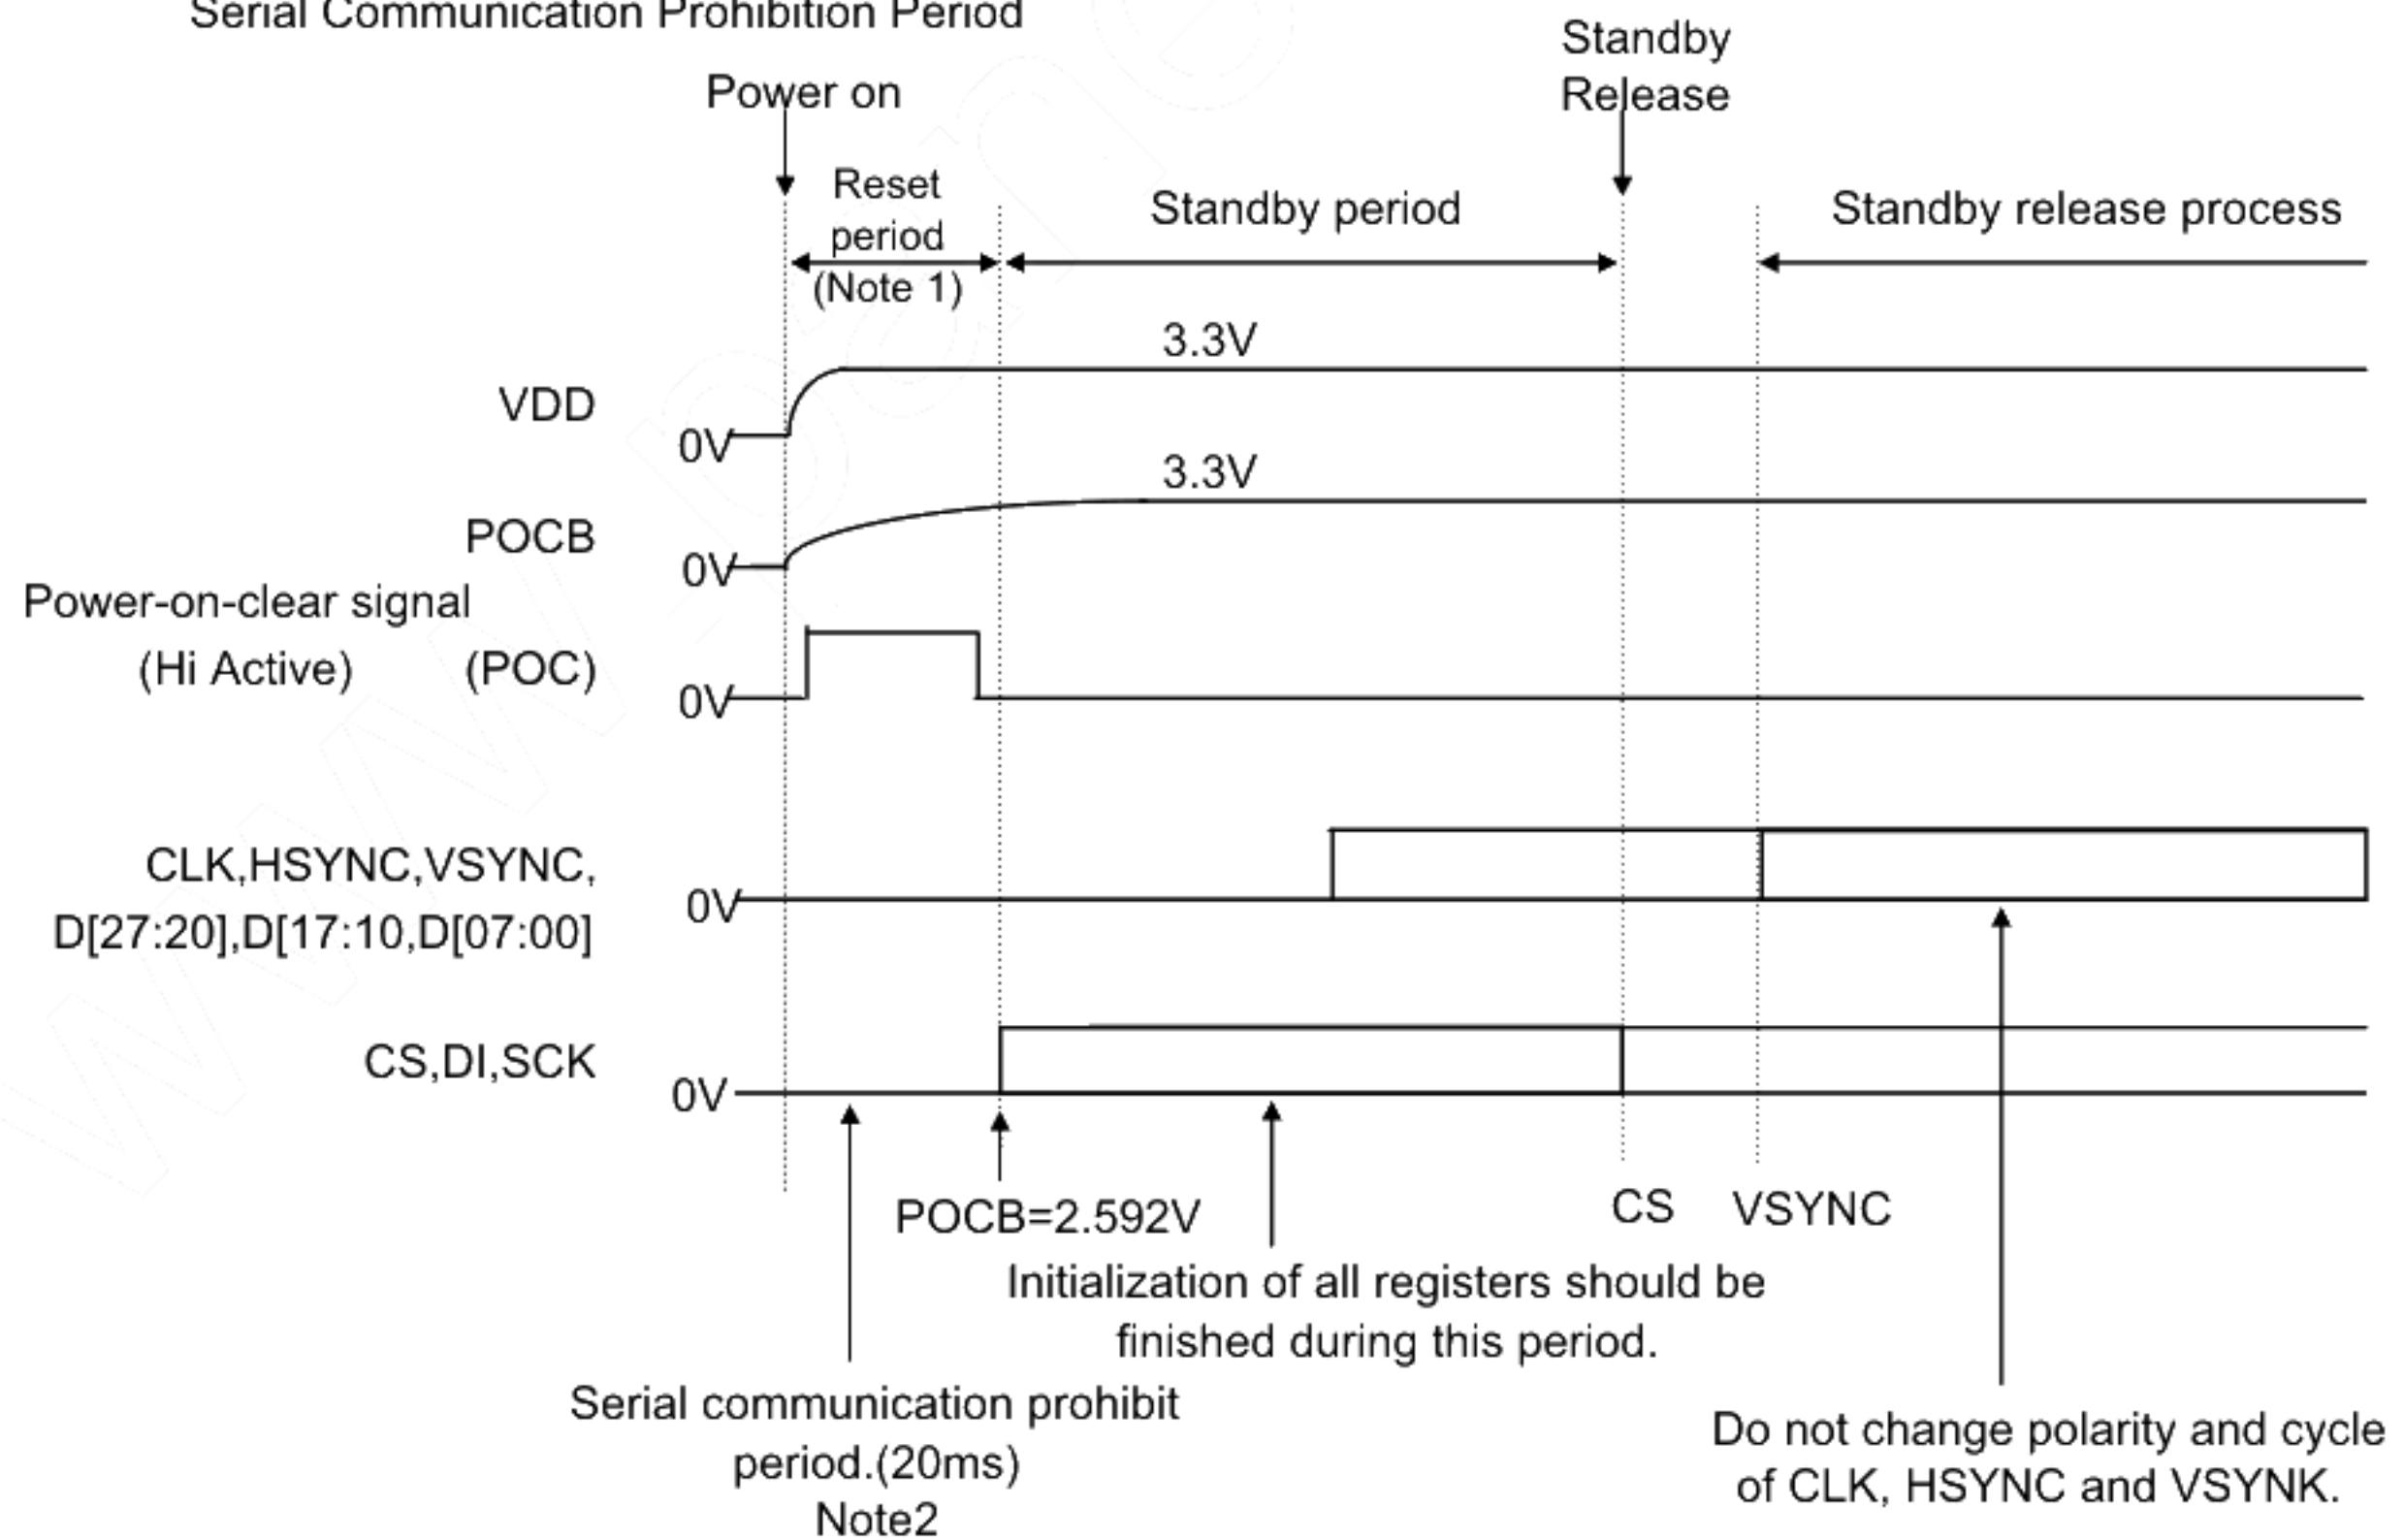

When rising of VDD takes long time, POCB will have unstable and unpredictable waveform.

Please determine value of external capacitor by which POCB takes 1.107 V or less at VDD is 2.7V.

Power On Sequence

Serial Communication Prohibition Period

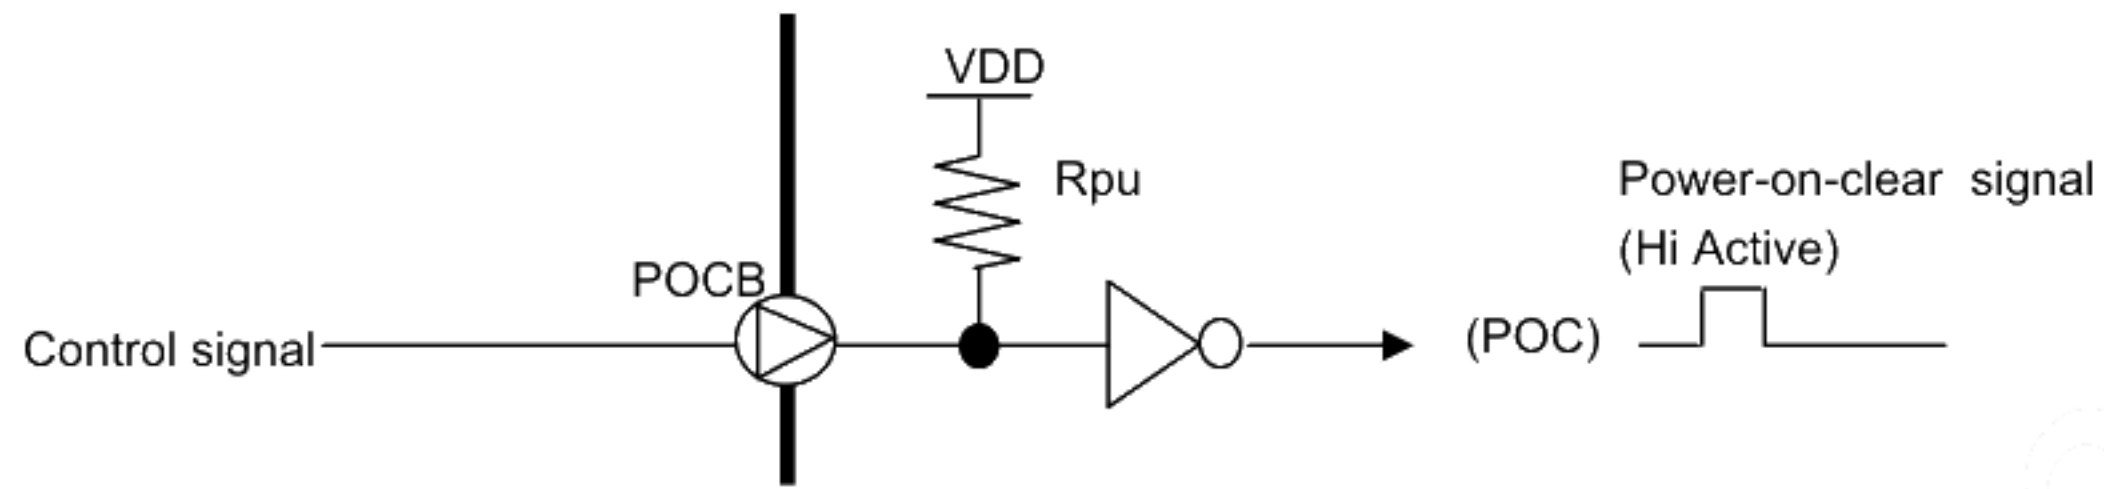

Note 1: All logic input signals are ignored during input period (POC is Hi).

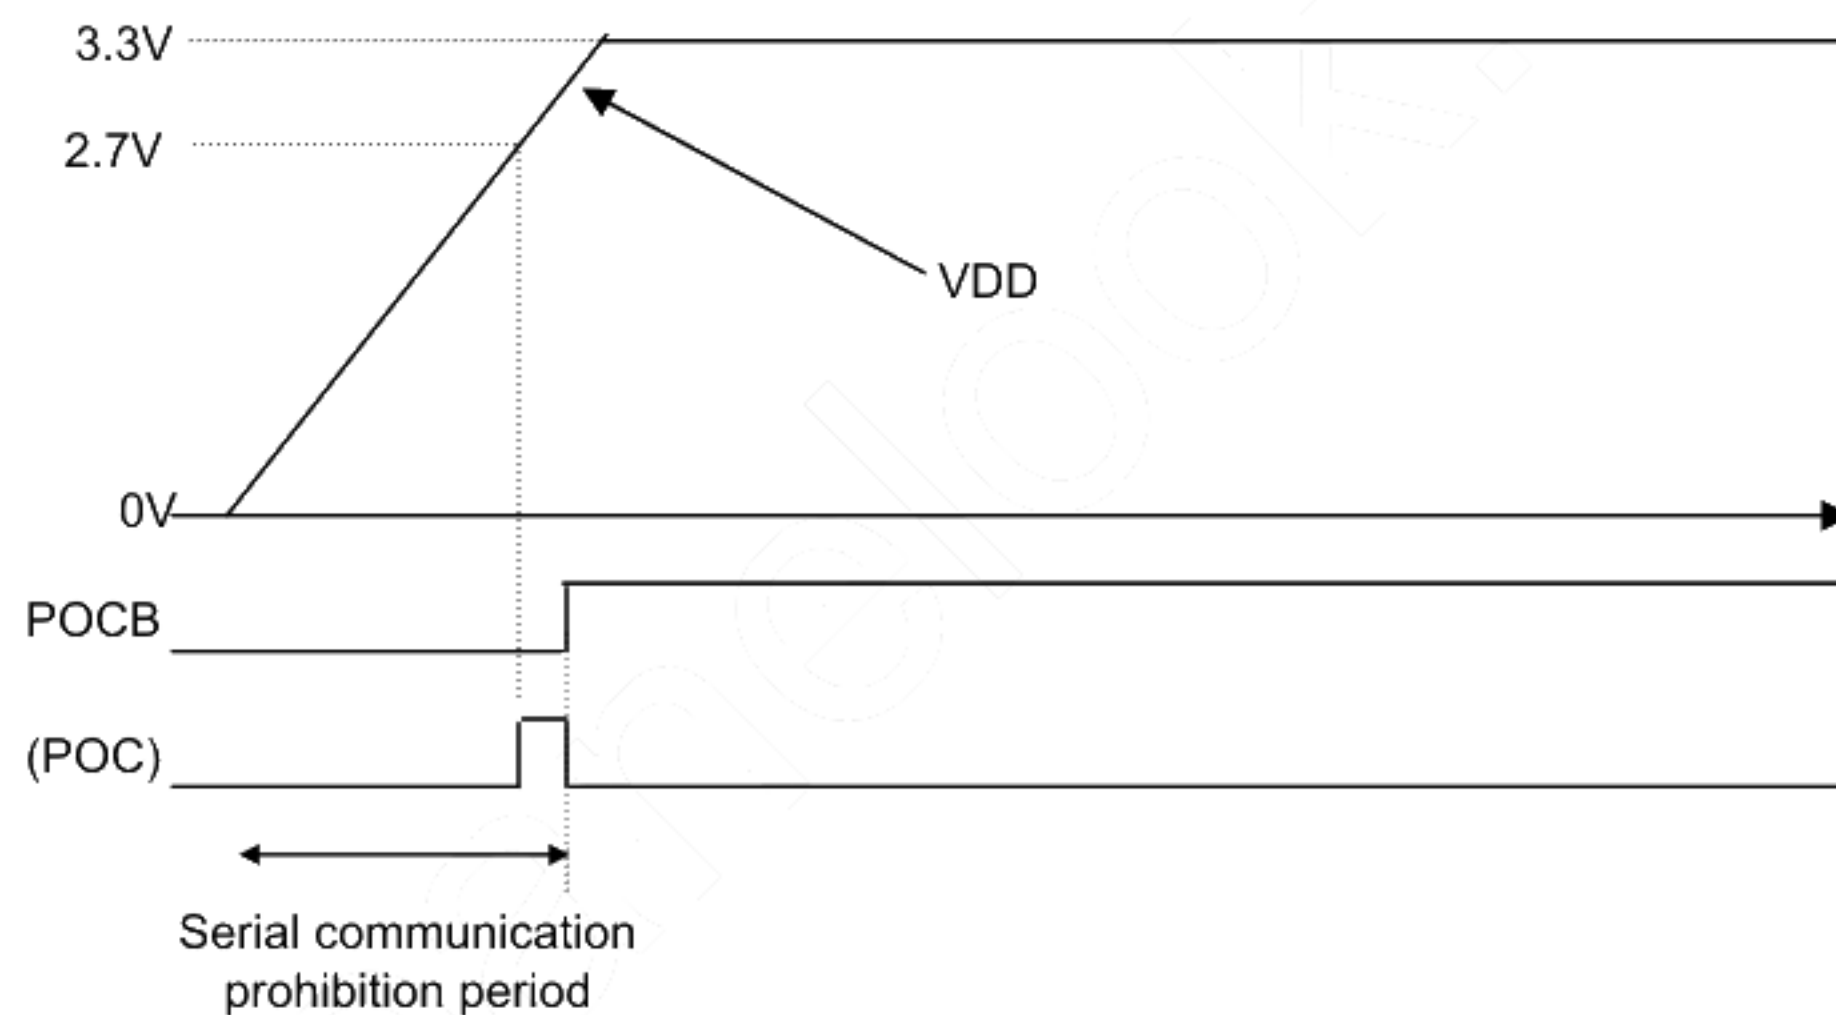

Note 2: Serial communication signals shall be input after VDD stabilizes at $VDD \geq [0.9 \times VDD]V$ for more than 20 msec or more after power on.

In case of rapid startup after power-on, directly control POCB terminal.

Power-on-clear circuit diagram

In case of directly controlling POCB terminal, POCB terminal should be set to "Lo" at Power-on. POCB should be changed to "Hi" after VDD is exceeding 2.7V. Serial communication is prohibited while POCB is "Lo".

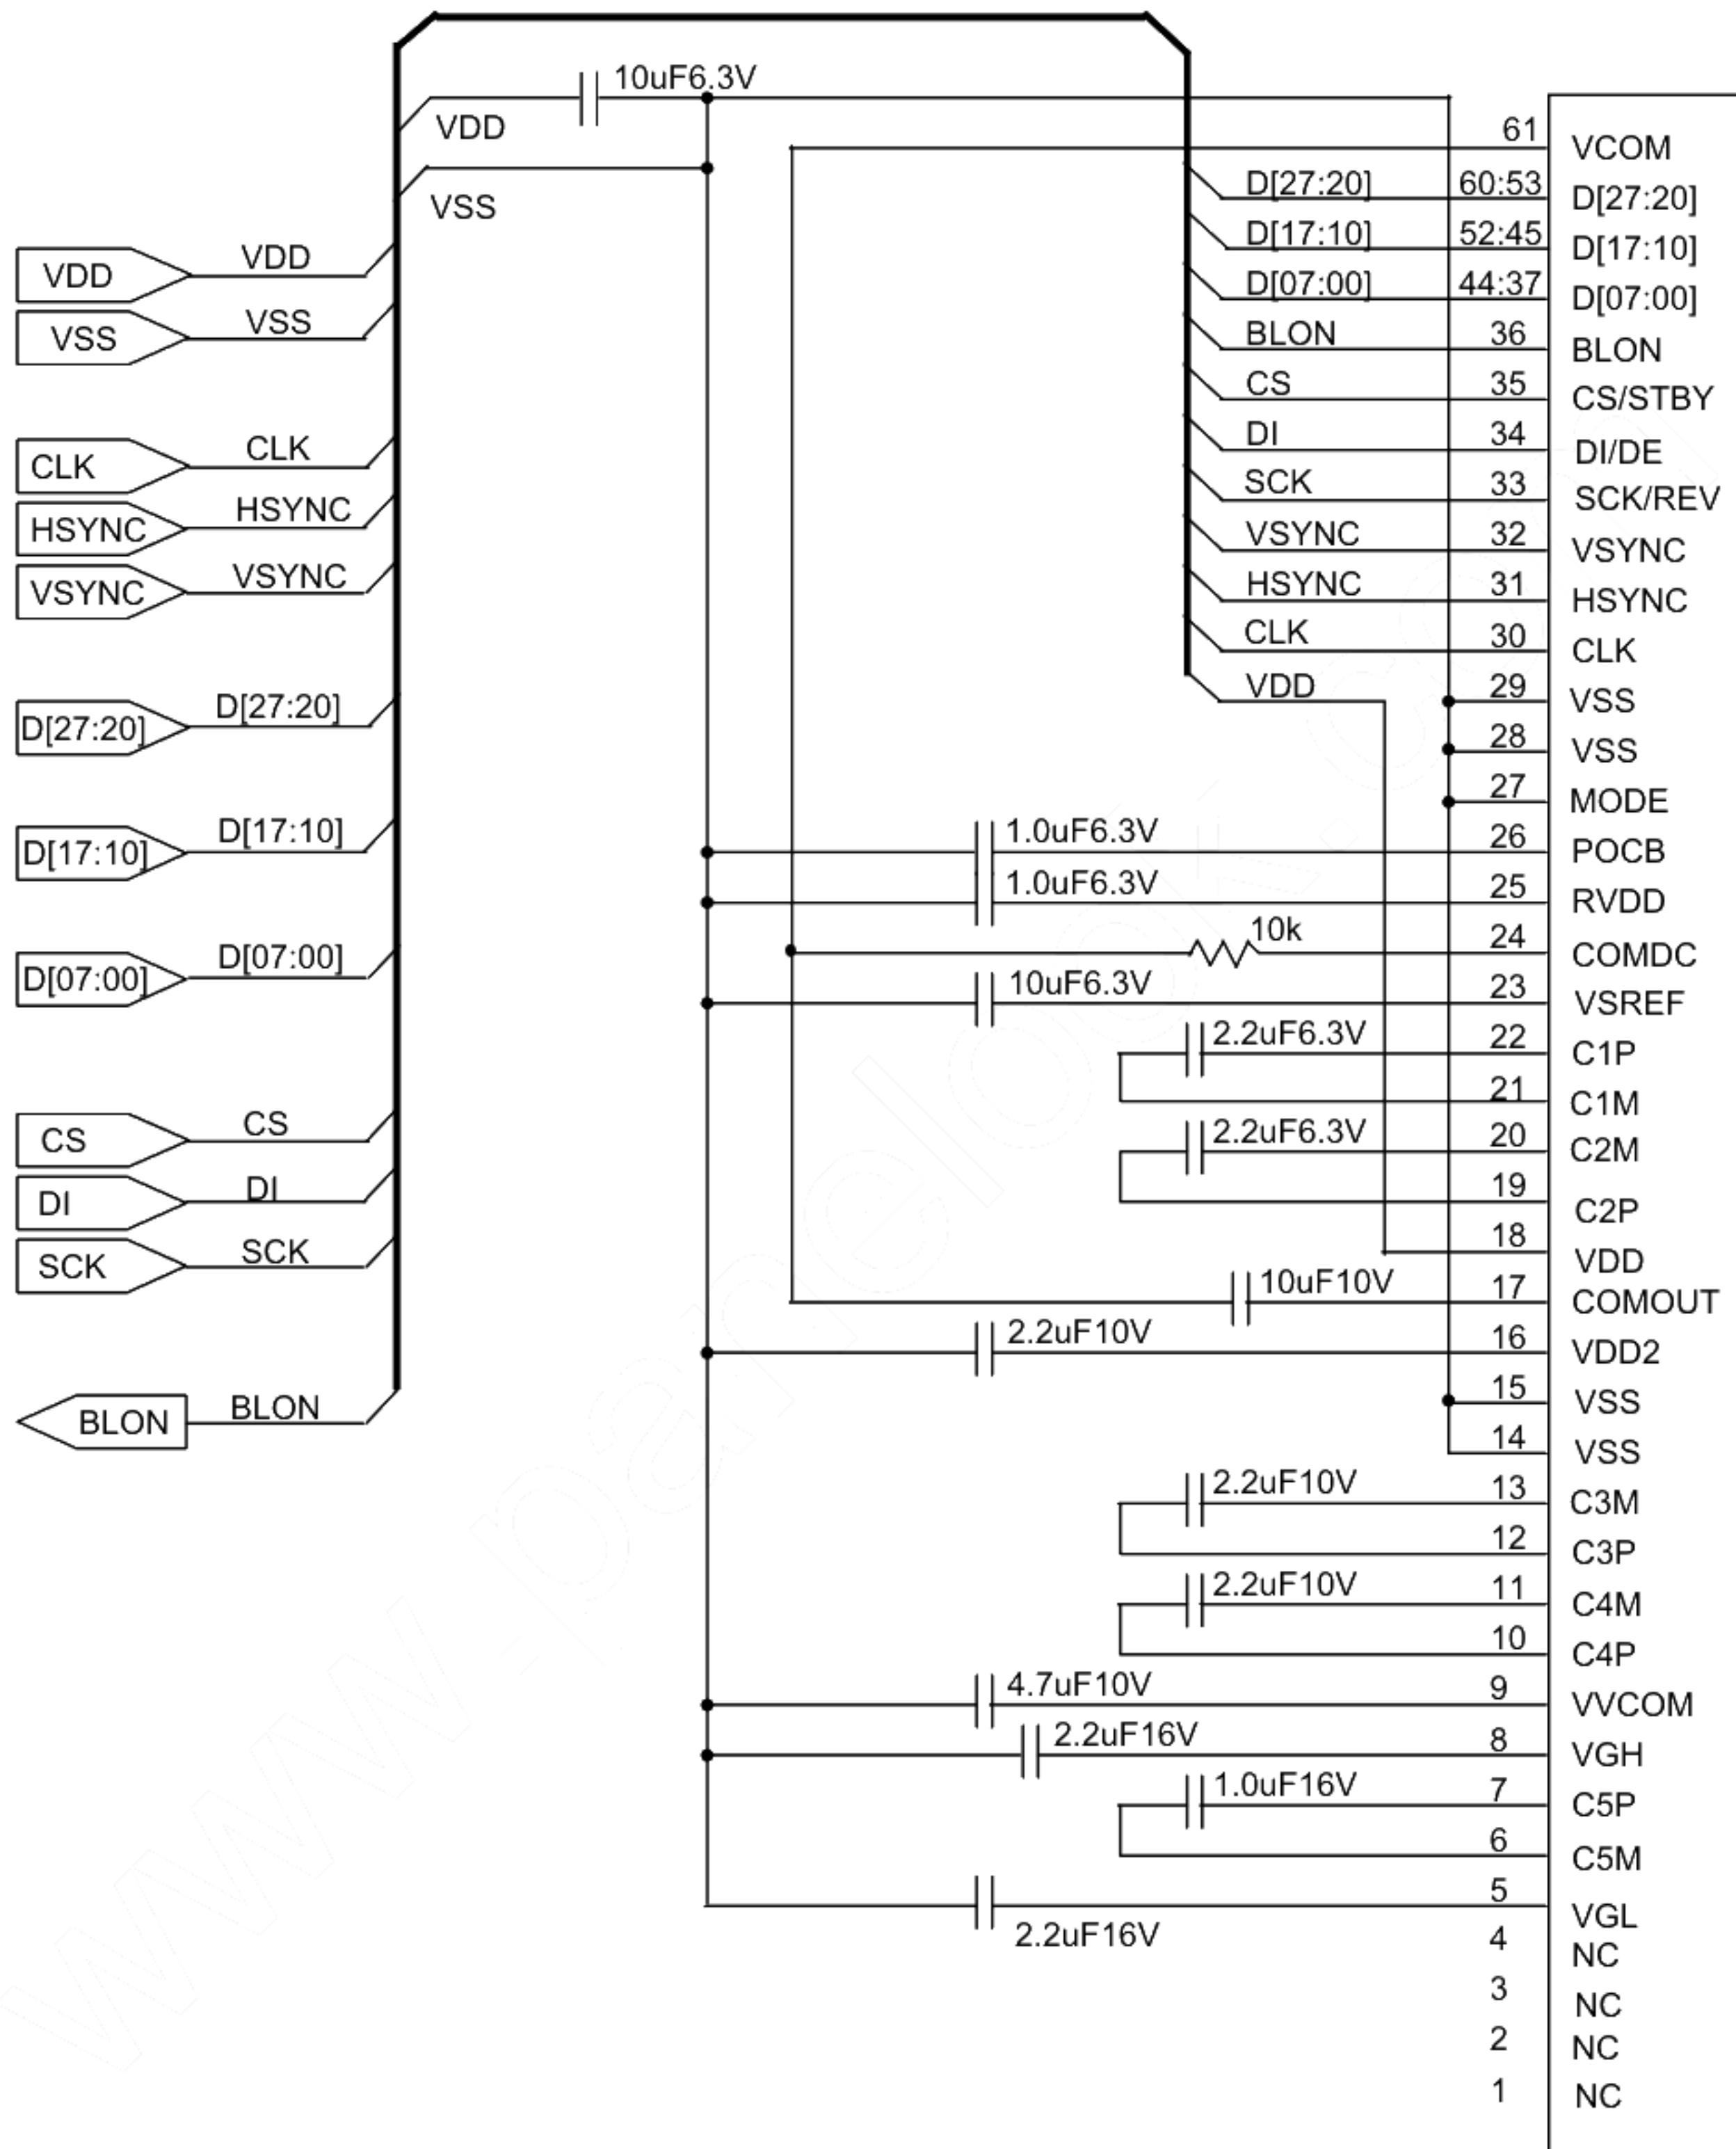

8.6 Other Functions

- Built-in Panel Residual Charge Reduction Circuit

When the power turns off in accordance with the mandatory procedure described in the section "8.4 Standby (Power save) Sequence", afterimage treatment is carried out after standby mode is set. This circuit automatically reduces panel's residual charge and prevents afterimage for a long time even if standby mode setting fails to be made before power-off.

11. Criteria of Judgment

11.1 Defective Display and Screen Quality

Test Condition:	Observed TFT-LCD monitor from front during operation with the following conditions
Driving Signal	Raster Patter (RGB in monochrome, white, black)
Signal condition	[Data]: FFh, A0h, 00h (3steps)
Observation distance	30 cm
Illuminance	200 to 350 lx
Backlight	IL=30mA

Defect item		Defect content		Criteria
Display Quality	Line defect	Black, white or color line, 3 or more neighboring defective dots		Not exists
	Dot defect	Uneven brightness on dot-by-dot base due to defective TFT or CF, or dust is counted as dot defect (brighter dot, darker dot) High bright dot: Visible through 2% ND filter at [Data]=00h Low bright dot: Visible through 5% ND filter at [Data]=00h Dark dot: Appear dark through white display at [Data]=A0h		Refer to table 1
Screen Quality	Dirt	Point-like uneven brightness (white stain, black stain etc)		Invisible through 1% ND filter
	Foreign particle	Point-like	0.25mm< ϕ	N=0
			0.20< ϕ ≤0.25mm	N≤2
			ϕ ≤0.20mm	Ignored
	Liner	3.0mm<length and 0.08mm<width length≤3.0mm or width≤0.08mm	N=0	
			Ignored	
	Flaw	Flaw on the surface of the Touch panel	0.05mm<W	Conform to the criteria of point-like foreign particles.
			0.03<W≤0.05mm	2<L≤5mm
				L≤2mm
			W≤0.03mm	Ignored
Others				Use boundary sample for judgment when necessary

 ϕ (mm): Average diameter = (major axis + minor axis)/2

Permissible number: N

13. Packing Specifications

Step 1. Each product is to be placed in one of the cut-outs of the tray with the display surface facing upward.(4products per tray)
Antistatic foam sheet is to be placed on the products in the tray.

Step 2. Each tray is to be piled up in same orientation and the trays be in a stack of 6.
One empty tray is to be put on the top of stack of 6 trays.

Step 3. 2 packs of moisture absorbers are to be placed on the top tray as shown in the drawing.
Put piled trays into a sealing bag.
Vacuum and seal the sealing bag with the vacuum sealing machine.

Step 4. The stack of trays in the plastic bag is to be inserted into a inner carton.

Step 5. A corrugated board is to be placed on the top and on the bottom of the inner carton.
The two corrugated boards and the inner carton is to be inserted into an outer carton.

Step 6. The outer carton needs to sealed with packing tape as shown in the drawing.
The model number, quantity of products, and shipping date are to be printed on the outer carton.
If necessary, shipping labels or impression markings are to be put on the outer carton.

Step 7. The outer carton is to be inserted into a extra outer carton with same direction.
The extra outer carton needs to sealed with packing tape as shown in the drawing.

Step 8. The model number, quantity of products, and shipping date are to be printed on the extra outer carton.
If necessary, shipping labels or impression markings are to be put on the extra outer carton.

Remark: The return of packing materials is not required.

14. Handling Instruction

14.1 Cautions for Handling LCD panels

**Caution**

- (1) Do not make an impact on the LCD panel glass because it may break and you may get injured from it.
- (2) If the glass breaks, do not touch it with bare hands.
(Fragment of broken glass may stick you or you cut yourself on it.)
- (3) If you get injured, receive adequate first aid and consult a medial doctor.
- (4) Do not let liquid crystal get into your mouth.
(If the LCD panel glass breaks, try not let liquid crystal get into your mouth even toxic property of liquid crystal has not been confirmed.)
- (5) If liquid crystal adheres, rinse it out thoroughly.
(If liquid crystal adheres to your cloth or skin, wipe it off with rubbing alcohol or wash it thoroughly with soap. If liquid crystal gets into eyes, rinse it with clean water for at least 15 minutes and consult an eye doctor.)
- (6) If you scrap this products, follow a disposal standard of industrial waste that is legally valid in the community, country or territory where you reside.
- (7) Do not connect or disconnect this product while its application products is powered on.
- (8) Do not attempt to disassemble or modify this product as it is precision component.
- (9) If a part of soldering part has been exposed, and avoid contact (short-circuit) with a metallic part of the case etc. about FPC of this model, please.
Please insulate it with the insulating tape etc. if necessary.
The defective operation is caused, and there is a possibility to generation of heat and the ignition.
- (10) Since excess current protection circuit is not built in this TFT module, there is the possibility that LCD module or peripheral circuit become feverish and burned in case abnoramal operation is generated.
We recommend you to add excess current protection circuit to power supply.
- (11) The end part of glass and film of touch panel has conductivity, and avoid contact (short-circuit) with electroconductive case etc.. There is a possibility of setting up a defective touch panel, and insulate it for the case suppression (cushion etc.) if necessary, please.

**Caution**

This mark is used to indicate a precaution or an instruction which, if not correctly observed, may result in bodily injury, or material damages alone.

14.2 Precautions for Handling

- 1) Wear finger tips at incoming inspection and for handling the TFT monitors to keep display quality and keep the working area clean.
Do not touch the surface of the monitor as it is easily scratched.
- 2) Wear grounded wrist-straps and use electrostatic neutralization blowers to prevent static charge and discharge when handling the TFT monitors as the LED in this TFT monitors is damageable to electrostatic discharge.
Designate an appropriate operating area, and set equipment, tools, and machines properly when handling this product.
- 3) Avoid strong mechanical shock including knocking, hitting or dropping to the TFT monitors for protecting their glass parts. Do not use the TFT monitors that have been experienced dropping or strong mechanical shock.
- 4) Do not use or storage the TFT monitors at high temperature and high humidity environment. Particularly, never use or storage the TFT monitors at a location where condensation builds up.
- 5) Avoid using and storing TFT monitors at a location where they are exposed to direct sunlight or ultraviolet rays to prevent the LCD panels from deterioration by ultraviolet rays.
- 6) Do not stain or damage the contacts of the FPC cable .
FPC cable needs to be inserted until it can reach to the end of connector slot.
During insertion, make sure to keep the cable in a horizontal position to avoid an oblique insertion.
Otherwise, it may cause poor contact or deteriorate reliability of the FPC cable.
- 7) Do not bend or pull the FPC cable or carry the TFT monitor by holding the FPC cable.
- 8) Peel off the protective film on the TFT monitors during mounting process.
Refer to the section 14.5 on how to peel off the protective film.
We are not responsible for electrostatic discharge failures or other defects occur when peeling off the protective film.

14.3 Precautions for Operation

- 1) Since this TFT monitors are not equipped with light shielding for the driver IC, do not expose the driver IC to strong lights during operation as it may cause functional failures.
- 2) When turning off the power, turn off the input signal before or at the same timing of switching off the power.
- 3) Optimize VCOMDC within recommended operating conditions.
* When VCOMDC is not an optimal value, flicker and image sticking will be occurred.
- 4) Do not plug in or out the FPC cable while power supply is switch on.
Plug the FPC cable in and out while power supply is switched off.
- 5) Do not operate the TFT monitors in the strong magnetic field. It may break the TFT monitors.
- 6) Do not display a fixed image on the screen for a long time.
Use a screen-saver or other measures to avoid a fixed image displayed on the screen for a long time. Otherwise, it may cause burn-in image on the screen due the characteristics of liquid crystal.

14.4 Storage Condition for Shipping Cartons

Storage environment

- Temperature 0 to 40° C
- Humidity 60%RH or less
No-condensing occurs under low temperature with high humidity condition.
- Atmosphere No poisonous gas that can erode electronic components and/or wiring materials should be detected.
- Time period 3 months
- Unpacking To prevent damages caused by static electricity, anti-static precautionary measures (e.g. earthing, anti-static mat) should be implemented.
- Maximum piling up 7 cartons

14.5 Precautions for Peeling off the Protective film

The followings work environment and work method are recommended to prevent the TFT monitors from static damage or adhesion of dust when peeling off the protective films.

A) Work Environment

- a) Humidity: 50 to 70 %RH, Temperature 15 to 27 ° C
- b) Operators should wear conductive shoes, conductive clothes, conductive finger tips and grounded wrist-straps. Anti-static treatment should be implemented to work area's floor.
- c) Use a room shielded against outside dust with sticky floor mat laid at the entrance to eliminate dirt.

B) Work Method

The following procedures should be taken to prevent the driver ICs from charging and discharging.

- a) Use an electrostatic neutralization blower to blow air on the TFT monitors to its lower right when FPC is placed at the bottom.
Optimize direction of the blowing air and the distance between the TFT monitors and the electrostatic neutralization blower.
- b) Peel off the tab slowly (spending more than 2 secs to complete) by pulling it to opposite direction.

Direction of blowing air
(Optimize air direction and the distance)

Reference Method for Measuring Optical Characteristics and Performance

1. Measurement Condition (Backlight ON)

Measuring instruments: CS1000 (KONICA MINOLTA), LCD7000(OTSUKA ELECTRONICS), EZcontrast160D (ELDIM)

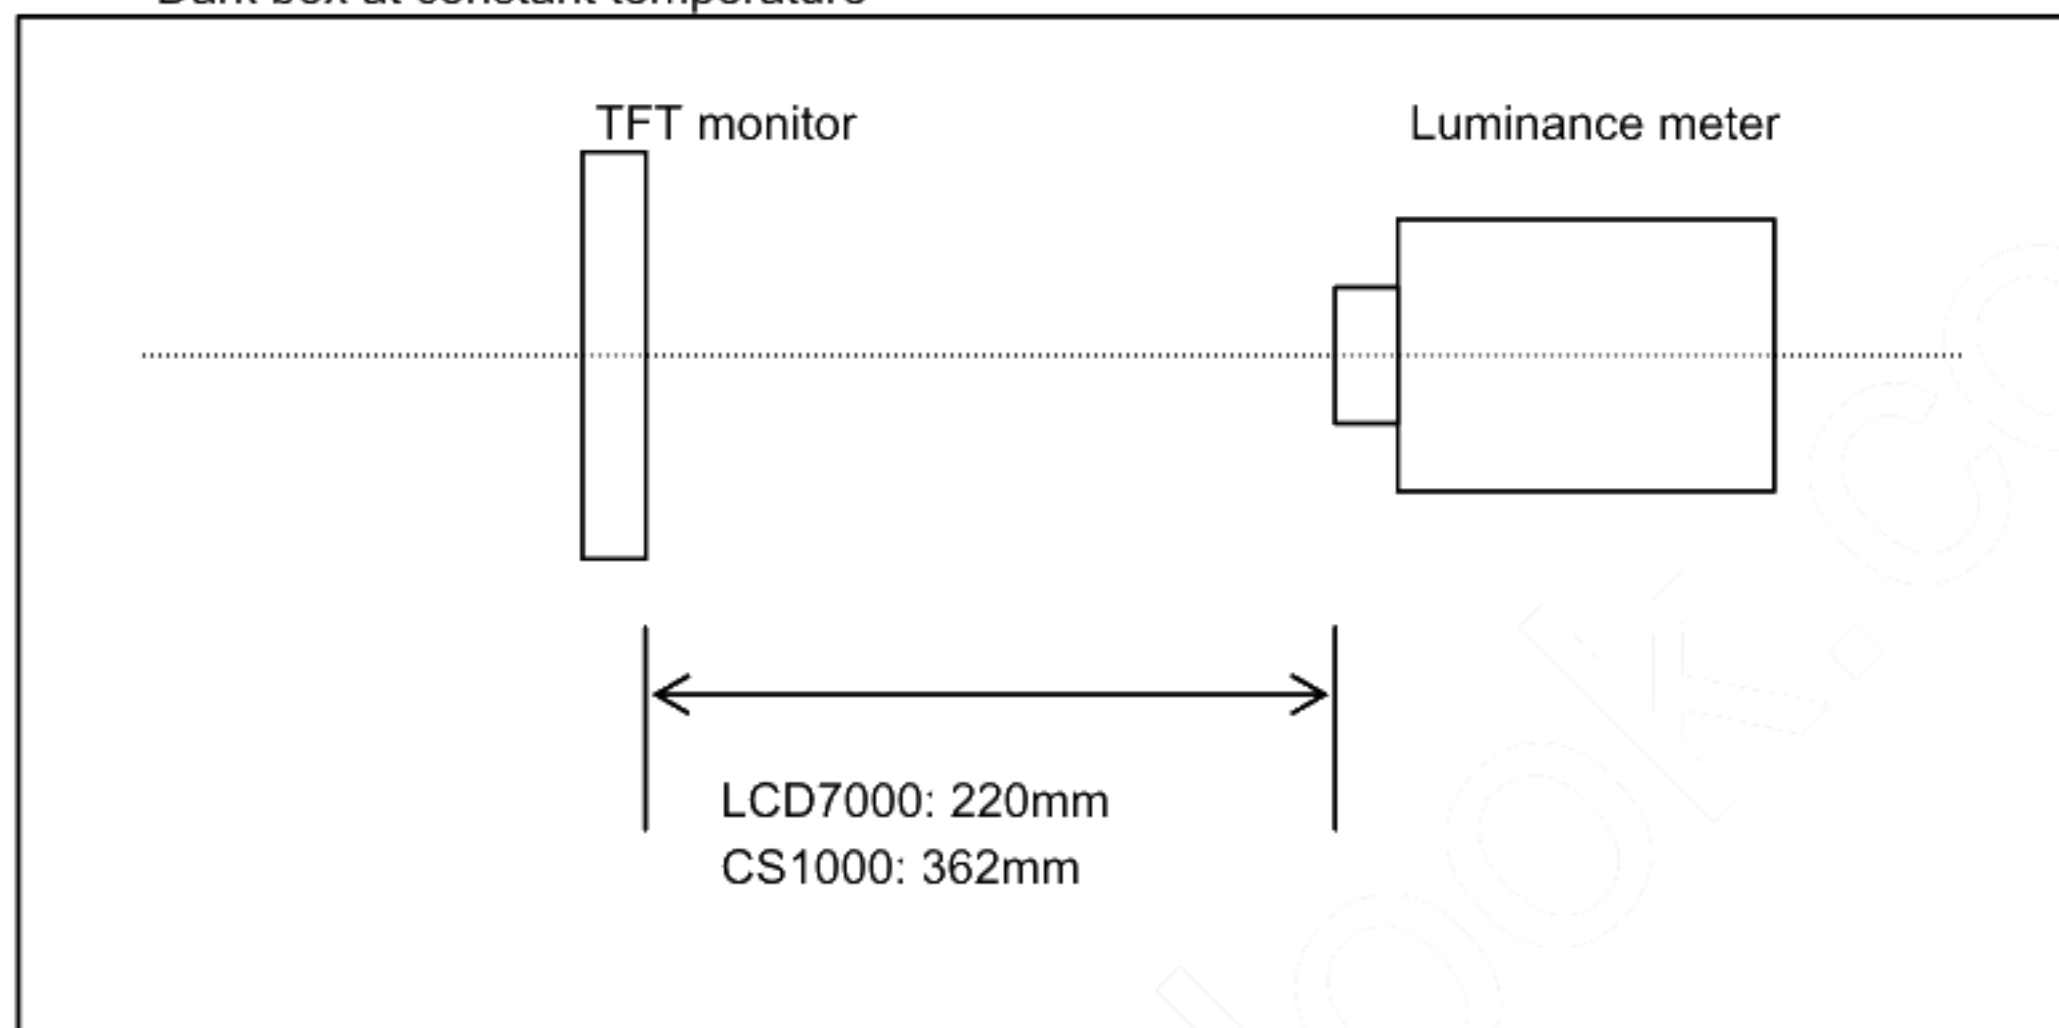

Driving condition: Refer to the section "Optical Characteristics"

Measured temperature: 25° C unless specified

Measurement system: See the chart below. The luminance meter is placed on the normal line of measurement system.

Measurement point: At the center of the screen unless otherwise specified

Dark box at constant temperature

Measurement is made after 30 minutes of lighting of the backlight.

Measurement point: At the center point of the screen

Brightness distribution: 9 points shown in the following drawing.

■ Cautionary instruction to handle a Touch-panel

● Cushion (between Touch Panel Chassis) Design

- 1) A cushion is required to be placed between Touch Panel and customer's chassis and there is a designated area to attach it. Attachment at area inside Input Prohibition Area must be forbidden.
If cushion was located inside Input Prohibition Area, Upper Electrode may be push constantly and which may cause the electrode breakage at the position falling on the edge of adhesive; it eventually results in Touch Panel malfunction in the future. (Please see "NG-1")
- 2) Be attention to the cushion material you use. In the case that too soft cushion was used, the cushion may protrude into Prohibition Area by being push strongly; which may result in the electrode breakage. Eventually there is a chance that the electrode breakage leads to the malfunction of Touch Panel in the future. (Please see "NG-2")
- 3) Cushion is required to be attached at the side of Customer's chassis.
Attaching a cushion at the side of Upper Electrode Film has a chance to deform the film and lead to the malfunction of Touch Panel in the future.

		OK	NG-1	NG-2
Cushion Deformation	Before Compression			
	After Compression			

● Design Guidance of Chassis (Front Part)

- 4) Be attention to stay Input Prohibition Area away from touching and/or drawing by a stylus pens in order to avoid the electrode breakage and potential malfunction of Touch Panel. (Please see "NG-3")
We recommend customers to design chassis (front case) being able to protect Input Prohibition Area.
- 5) Clearance between customer's chassis and Touch Panel surface is certainly required in order to avoid erroneous input caused by a collision of the edge of chassis. (Please see "NG-4")
A clearance of 0.3 to 0.7mm is recommended.

● Design Guidance of Chassis (Side Part)

- 6) Upper Electrode and Lower Electrode fall on the edge of Touch Panel outline.
Redundant design having enough clearance to avoid electric short with chassis is highly recommended. (Please see "NG-5")

NG-3	NG-4	NG-5

● Example of Recommended Chassis Design

Refer to "3.2 Outward Form".

- As a terminal resistance has individual specificity, calibration to align the displaying and the sensing position one each is mandatory before use.
