## **Warning**

1. This Kyocera LCD module has been specifically designed for use only in electronic devices and industrial machines in the area of audio control, office automation, industrial control, home appliances, etc. The module should not be used in applications where the highest level of safety and reliability are required and module failure or malfunction of such module results in physical harm or loss of life, as well as enormous damage or loss. Such fields of applications include, without limitation, medical, aerospace, communications infrastructure, atomic energy control. Kyocera expressly disclaims any and all liability resulting in any way to the use of the module in such applications.
  
2. Customer agrees to indemnify, defend and hold Kyocera harmless from and against any and all actions, claims, damages, liabilities, awards, costs, and expenses, including legal expenses, resulting from or arising out of Customer's use, or sale for use, or Kyocera modules in applications.

## **Caution**

1. Kyocera shall have the right, which Customer hereby acknowledges, to immediately scrap or destroy tooling for Kyocera modules for which no Purchase Orders have been received from the Customer in a two-year period.

## 1. Application

This document defines the specification of KCG057QV1DB-G760. (RoHS Compliant)

## 2. Construction and outline

LCD	: Transmissive color dot matrix type STN
Duty ratio	: 1/240 duty
Backlight system	: CFL (1 tube, U-figure type)
Inverter	: Option
Recommended inverter	: CXA-L0612A-VJL (TDK) or equivalent
Polarizer	: Glare treatment
Additional circuit	: Bias voltage circuit, Randomizing circuit, DC/DC converter circuit, Temperature compensation circuit

### 3. Mechanical specifications

Item	Specification	Unit
Outline dimensions *1	144 (W)×(104.8) (H) × 12.7 (D)	mm
Active area	115.18 (W) × 86.38 (H) (14.4cm / 5.7 inch (Diagonal))	mm
Effective viewing area	117.2 (W) × 88.4 (H)	mm
Dot format	320×(R,G,B) (W) × 240 (H)	dot
Dot size	0.10 (W) × 0.34 (H)	mm
Dot pitch	0.12 (W) × 0.36 (H)	mm
Base color *2	Normally Black	-
Mass	175	g

\*1 Projection not included. Please refer to outline for details.

\*2 Due to the characteristics of the LCD material, the color varies with environmental temperature.

Frame frequency *4	f <sub>FRM</sub>	-	70	75	80	Hz
Current consumption for logic	I <sub>DD</sub>	*5	-	19	29	mA
Power consumption	P <sub>DISP</sub>		-	95	143	mW

\*1 The supply voltage ( $V_{CONT} = V_{OP}$ ) to drive the display has individual difference. Please adjust the contrast to be most suitable.

\*2 Frame frequency :  $f_{\text{FRM}} = 75\text{Hz}$

\*3 The LCD module has a temperature compensation circuit.

\*4 In consideration of display quality, it is recommended that frame frequency be set in the range of 70-80Hz. When you have to use higher frame and clock frequencies, confirm the LCD's performance and quality prior to finalizing the frequency value. Generally, as frame and clock frequencies become higher current consumption increases and display quality will degrade.

#### \*5 Display pattern:

### 6-2. Definition of Vop

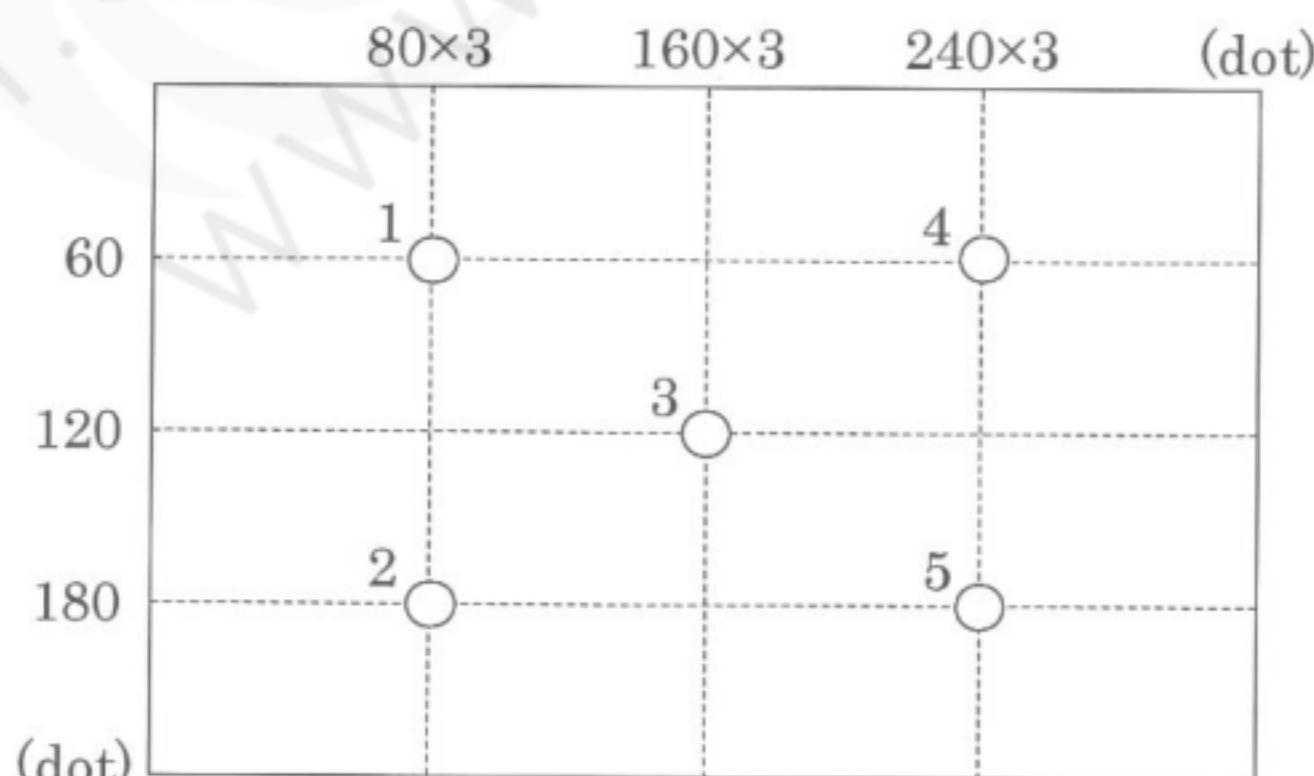

### 6-3. Definition of response time

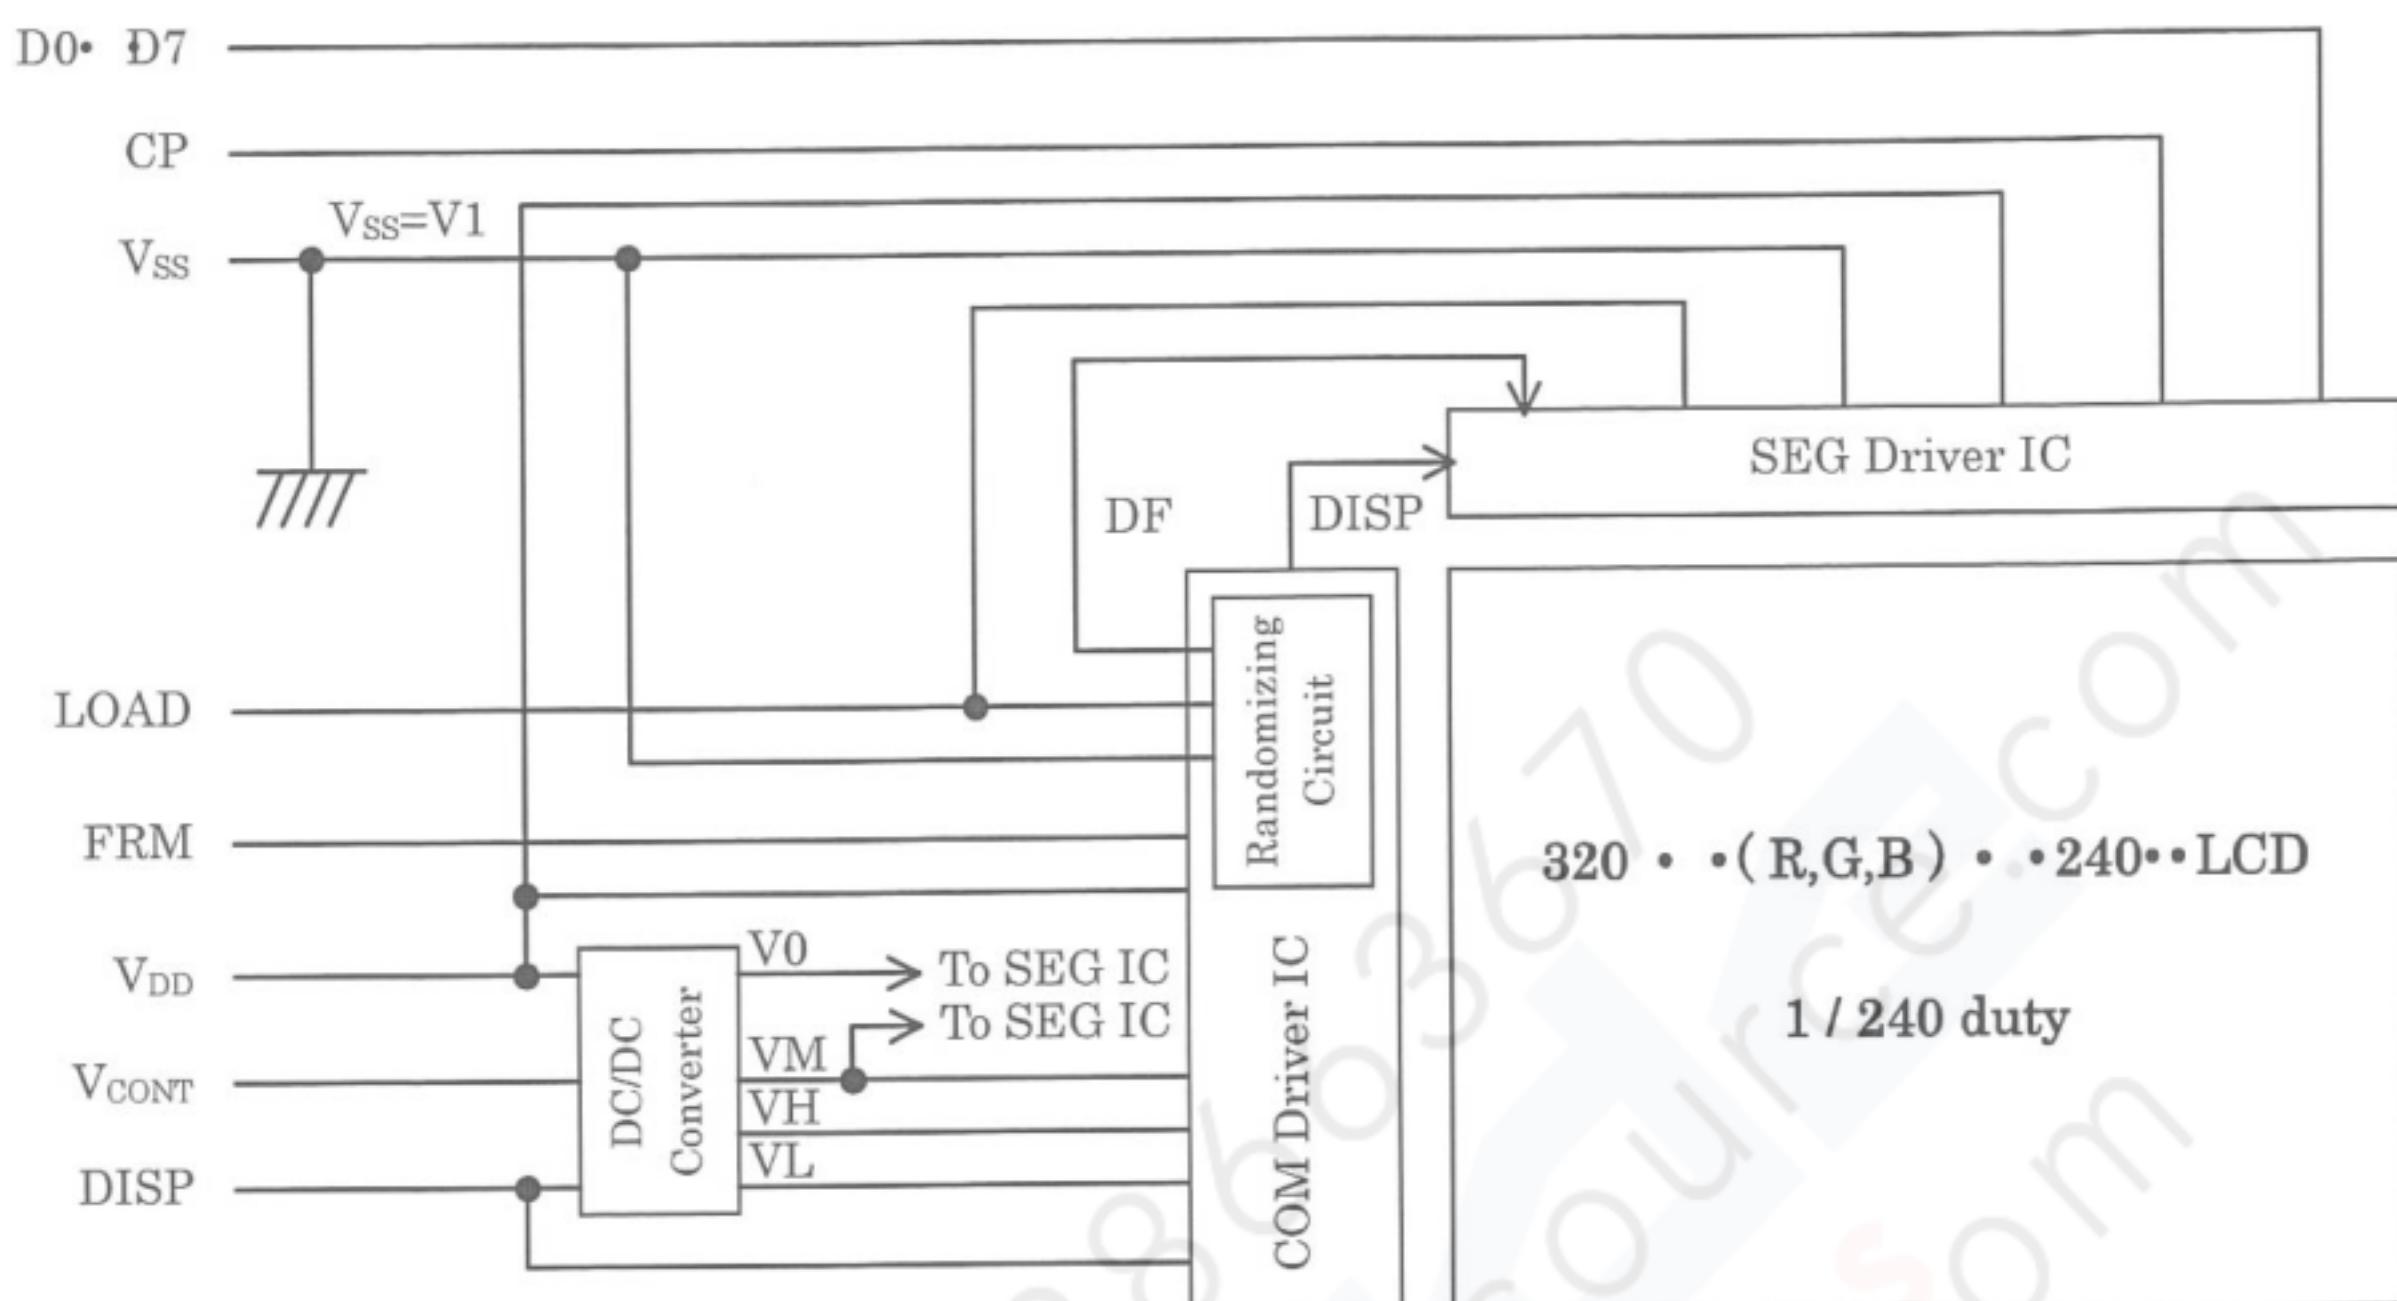

#### 6.4. Definition of viewing angle

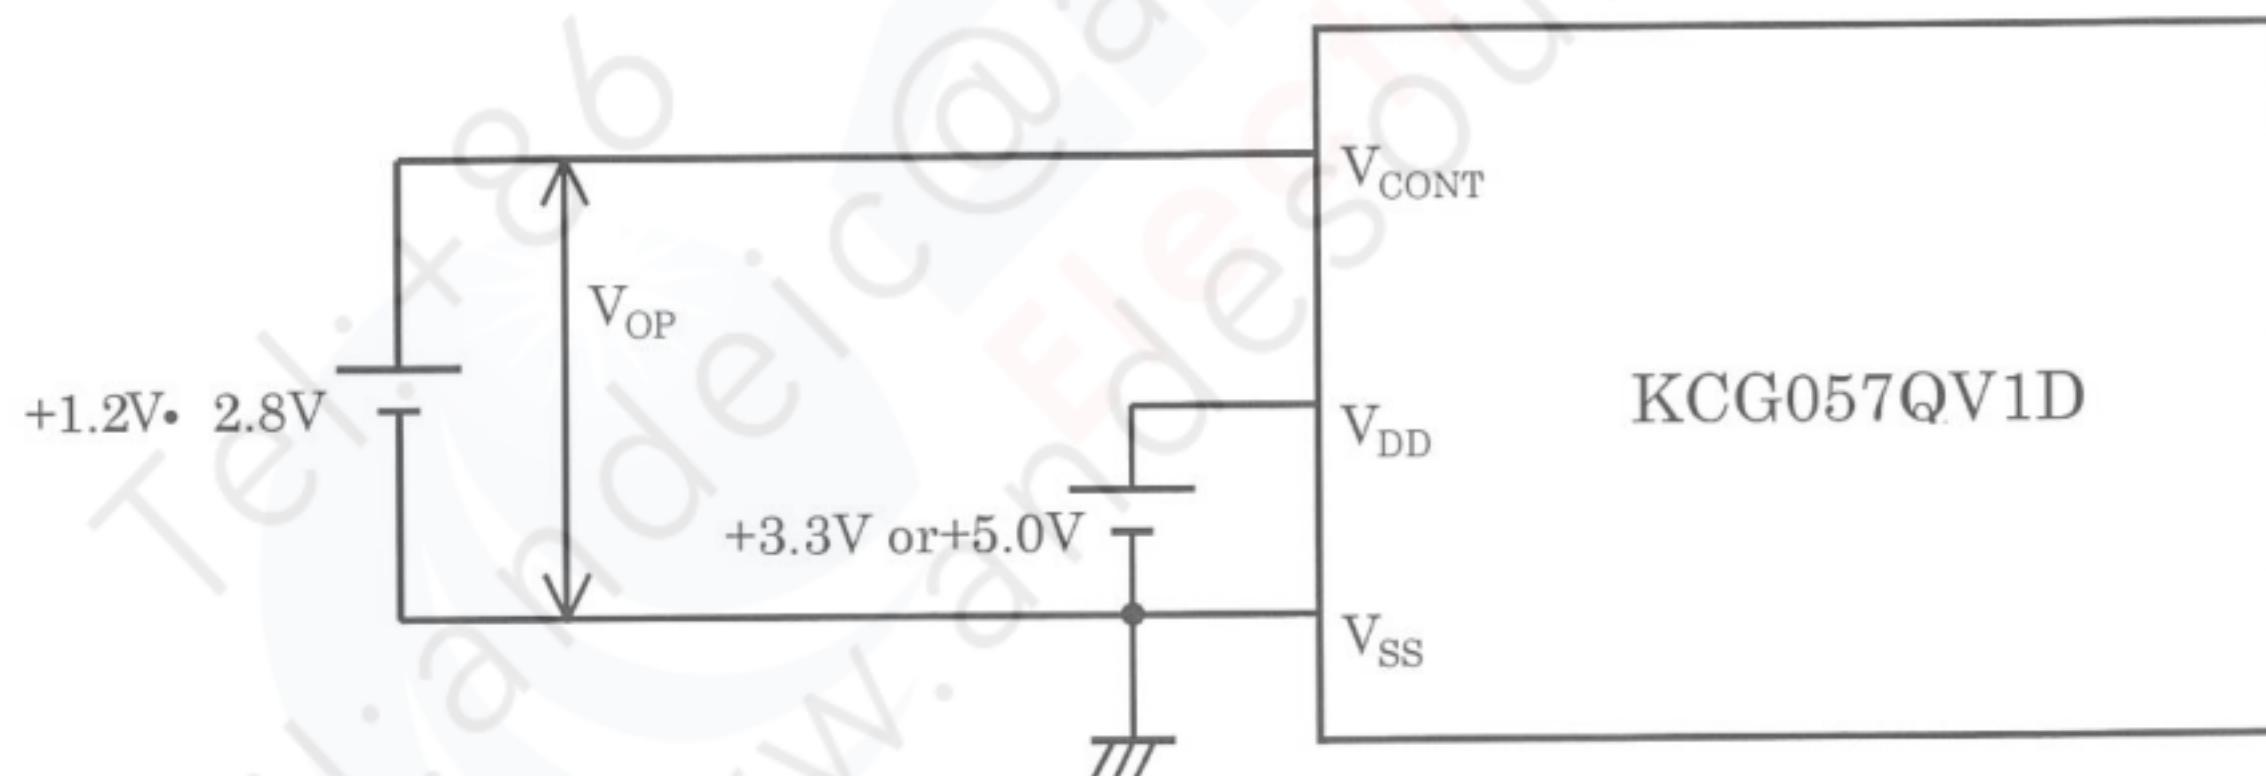

### •• 6-5. Brightness measuring points

- 1) Rating is defined on the average in the viewing area.
  - 2) Measured 30 minutes after the CFL is powered on. (Ambient temp. = 25°C)
  - 3) The inverter should meet the CFL rating in the specification:
    - Sine, symmetric waveform without spike in positive and negative.

\*1 CP cycle is adjusted so that FRM signal is 75Hz.

\*2 LOAD cycle is constant.

## 12. Supply voltage sequence condition

In normal operation, logic within the LCD module reverses the polarity of the drive voltage every few lines to prevent DC damage to the liquid crystal material. But when a voltage is present on  $V_{CONT}$  outside of the time when the  $V_{DD}$  logic voltage is stable, a drive voltage is applied to the liquid crystal material without the polarity reversals. This sometimes result in a deterioration of display quality and a reduction in life time. ..

.....

\* Input signal: FRM, LOAD, CP, D0~ D7..

\* The above sequence should be designed as to maintain each normal voltage when the liquid crystal module load is applied to your system.

\* Control the supply voltage sequence to not float any signal line when the LCD panel is being driven.

### **13. Backlight characteristics**

Item	Symbol	Min.	Typ.	Max.	Unit	Note
Starting discharge voltage *1	VS	-	-	1,550	Vrms	0°C
		-	-	1,035	Vrms	25°C
Discharge tube current *2	IL	3.0	4.0	6.0	mArms	-
Discharge tube voltage	VL	-	685	-	Vrms	-
Operating life time *3	T	60,000	75,000	-	h	IL=4.0mArms
Operating frequency	F	30	-	100	kHz	-

\*1 The non-load output voltage (VS) of the inverter should be at least 1.3 times the maximum VS at low temperatures to provide enough margins to assure that the CFL will start, because actual VS may increase due to leakage current from the CFL cables. (Reference value: 2,015 Vrms Min.)

\*2 We recommend that you should set the discharging tube current lower than the typical value to prevent the accumulated heat of the CFL tube from deteriorating the performance of the LCD.

\*3 Defined as when the luminance or quantity of light has decreased to 50% of the initial value.  
The average life of a CFL will decrease when the LCD is operating at lower temperatures.

\* Prolonged storage in darkness and/or at low temperature may slow the ignition and rise to full brightness of the CFL. Please use an inverter designed to provide sufficient starting voltage for more than 1 second. Also a decreased starting discharge voltage or shortened ignition time may not turn on the CFL lamp.

## **16. Precautions for use**

## 16-1. Installation of the LCD

- 1) The LCD module has a grounding hole. Please ground the module to prevent noise and to stabilize its performance as circumstances demand.
  - 2) A transparent protection plate shall be added to protect the LCD and its polarizer.
  - 3) The LCD shall be installed so that there is no pressure on the LSI chips.
  - 4) The LCD shall be installed flat, without twisting or bending.
  - 5) Please design the housing window so that its edges are between the active area and the effective area of the LCD screen.
  - 6) Please refer to the following our recommendable value of Clamp-down torque when installing.  
Clamp-down torque :  $0.32\pm0.03\text{N}\cdot\text{m}$ 
    - Please set up 'SPEED-LOW', 'SOFT START-SLOW' when using electric driver.  
Recommendable screw JIS tapping screw two types nominal dia.3.0mm installing boss hole depth  $4.4\pm0.2\text{mm}$
    - Washer/mounting hole (Hole diameter) : • 8.0 • 8.4
    - Please be careful not to use high torque which may damage LCD module in installation.

## 16-2. Static electricity

- 1) Since CMOS ICs are mounted directly onto the LCD glass, protection from static electricity is required.
  - 2) Workers should use body grounding. Operator should wear ground straps.

### 16-3. LCD operation

- 1) The LCD shall be operated within the limits specified. Operation at values outside of these limits may shorten life, and/or harm display images.
  - 2) Adjust the "Supply voltage for LCD driving ( $V_{CONT}$ )" to obtain optimum viewing angle and contrast ratio.

## 16-4. Storage

- 1) The LCD shall be stored within the temperature and humidity limits specified.  
• Store in a dark area, and protect the LCD from direct sunlight or fluorescent light.
  - 2) Always store the LCD so that it is free from external pressure onto it.

## 16-5. Usage

- 1) DO NOT store in a high humidity environment for extended periods. Polarizer degradation bubbles, and/or peeling off of the polarizer may result.
  - 2) The front polarizer is easily scratched or damaged. Prevent touching it with any hard material, and from being pushed or rubbed.
  - 3) The LCD screen may be cleaned by wiping the screen surface with a soft cloth or cotton pad using a little Ethanol.
  - 4) Water may cause damage or discoloration of the polarizer. Clean condensation or moisture from any source immediately.
  - 5) Always keep the LCD free from condensation during testing. Condensation may permanently spot or stain the polarizer.
  - 6) Do not pull the CFL lead wires and do not bend the root of the wires. Housing should be designed to protect CFL lead wires from external stress.
  - 7) Do not disassemble LCD module because it will result in damage.
  - 8) This Kyocera LCD module has been specifically designed for use in general electronic devices, but not for use in a special environment such as usage in an active gas.\*\* Hence, when the LCD is supposed to be used in a special environment, evaluate the LCD thoroughly beforehand and do not expose the LCD to chemicals such as an active gas.
  - 9) Please do not use solid-base image pattern for long hours because a temporary afterimage may appear. We recommend using screen saver etc. in cases where a solid-base image pattern must be used.

Spec No.	Part No.	Page
TQ3C-8EAC0-E1DDV135-00	KCG057QV1DB-G760	16

- 10) Liquid crystal may leak when the module is broken. Be careful not to let the fluid go into your eyes and mouth. In the case the fluid touches your body; rinse it off right away with water and soap.

## 17. Reliability test data

\* Each test item uses a test LCD only once. The tested LCD is not used in any other tests.

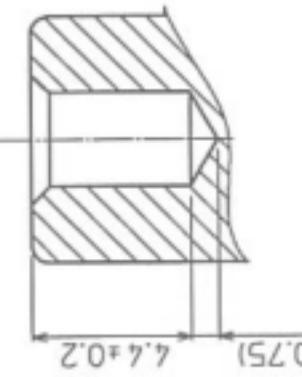

\* The LCD is tested in circumstances in which there is no condensation.

\* The reliability test is not an outgoing inspection.

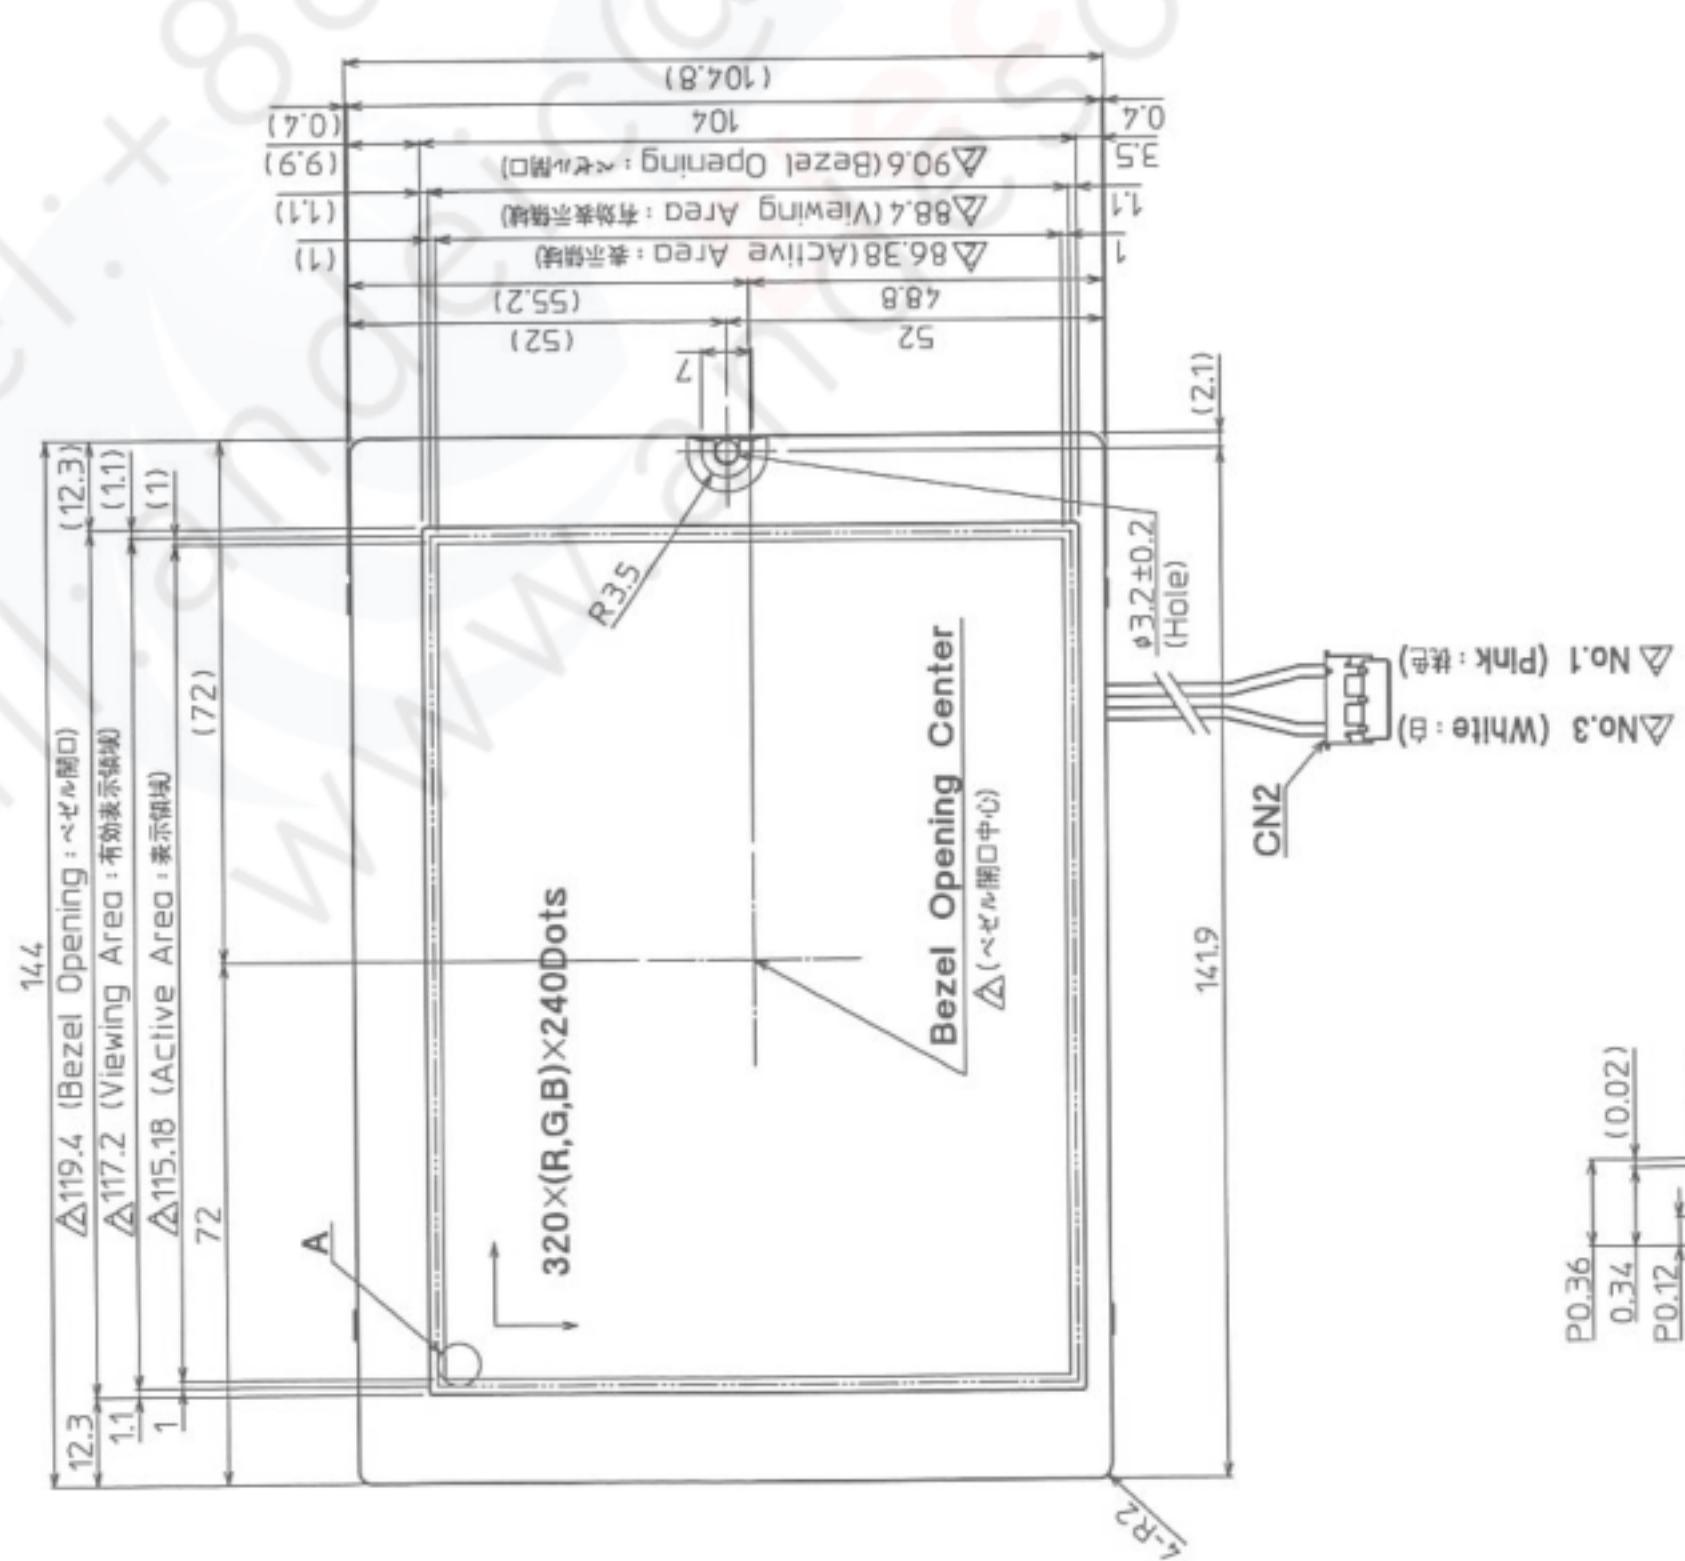

\* The result of the reliability test is for your reference purpose only.

• • • The reliability test is conducted only to examine the LCD's capability.

## Visuals specification

### 1) Note

Item	Note								
General	<p>1. When defects specified in this Inspection Standards are inspected, operating voltage (V<sub>OP</sub>) shall be set at the level where optimized contrast is available. Display quality is applied up to effective viewing area. (Bi-level INSPECTION)</p> <p>2. This inspection standard about the image quality shall be applied to any defect within the effective viewing area and shall not be applicable to outside of the area.</p> <p>3. Should any defects which are not specified in this standard happen, additional standard shall be determined by mutual agreement between customer and Kyocera.</p> <p>4. Inspection conditions</p> <table> <tr> <td>Luminance</td> <td>: 500 Lux minimum.</td> </tr> <tr> <td>Inspection distance</td> <td>: 300 mm (from the sample)</td> </tr> <tr> <td>Temperature</td> <td>: 25±5°C</td> </tr> <tr> <td>Direction</td> <td>: right above</td> </tr> </table>	Luminance	: 500 Lux minimum. Definition of inspection item	<table> <tr> <td>Pinhole, Bright spot</td> <td>The color of a small area is different from the remainder.</td> </tr> <tr> <td>Black spot, Scratch</td> <td>The phenomenon does not change with voltage.</td> </tr> <tr> <td>Foreign particle</td> <td></td> </tr> </table>	Pinhole, Bright spot	The color of a small area is different from the remainder.	Black spot, Scratch	The phenomenon does not change with voltage.	Foreign particle			
Pinhole, Bright spot	The color of a small area is different from the remainder.								
Black spot, Scratch	The phenomenon does not change with voltage.								
Foreign particle									
Contrast variation	<p>The color of a small area is different from the remainder.</p> <p>The phenomenon changes with voltage.</p>								
Polarizer (Scratch, Bubble, Dent)	Scratches, bubbles, and dent in the polarizer which can be observed in on / off state.
