Version 1.0 17 July 2013 10 / 36

### VLED rising time is 0.5ms

- Note (2) If the PWM control duty ratio is less than 10%, there is some possibility that acoustic noise or backlight flash can be found. And it is also difficult to control the brightness linearity.
- Note (3) If PWM control frequency is applied in the range less than 1KHz, the "waterfall" phenomenon on the screen may be found. To avoid the issue, it's a suggestion that PWM control frequency should follow the criterion as below.

PWM control frequency 
$$f_{\text{PWM}}$$
 should be in the range

$$(N+0.33)*f \le f_{\mathsf{PWM}} \le (N+0.66)*f$$
  $N: \mathsf{Integer}\ (N \ge 3)$   $f: \mathsf{Frame\ rate}$ 

Note (4) The specified LED power supply current is under the conditions at "LED\_VCCS = Typ.", Ta = 25 ± 2 °C, f<sub>PWM</sub> = 200 Hz, Duty=100%.

Note (1) LED current is measured by utilizing a high frequency current meter as shown below:

Note (2) For better LED light bar driving quality, it is recommended to utilize the adaptive boost converter with current balancing function to drive LED light-bar.

Note (3)  $P_L = I_L \times V_L$  (Without LED converter transfer efficiency)

Note (4) The lifetime of LED is defined as the time when it continues to operate under the conditions at Ta =  $25 \pm 2$  °C and I<sub>L</sub> = 20 mA(Per EA) until the brightness becomes  $\leq 50\%$  of its original value.

Note (1) Definition of Viewing Angle ( $\theta x$ ,  $\theta y$ )

Note (2) Definition of Contrast Ratio (CR):

The contrast ratio can be calculated by the following expression.

Contrast Ratio (CR) = L63 / L0

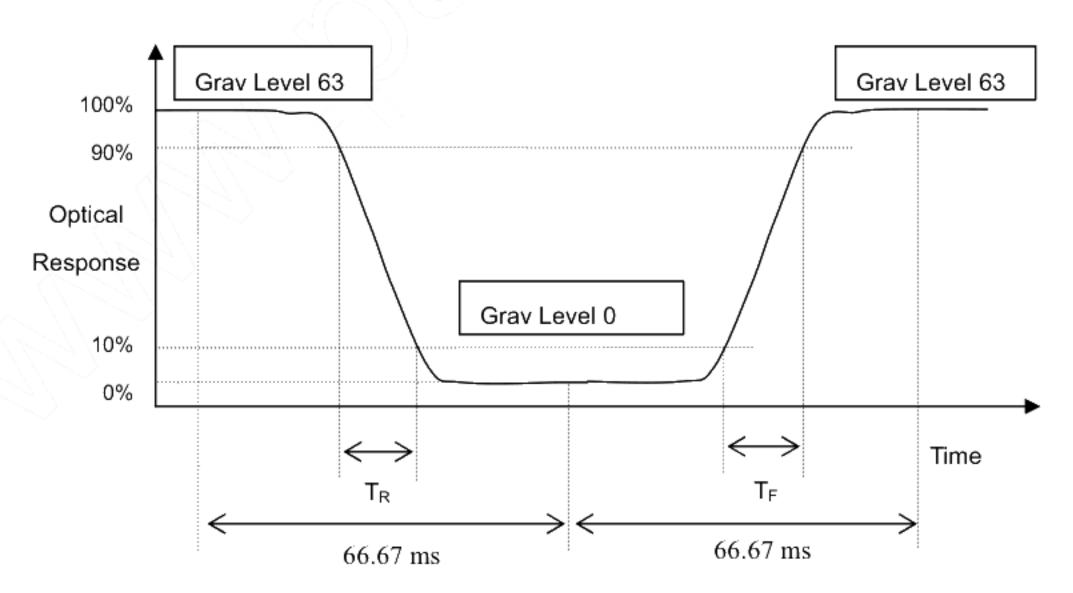

L63: Luminance of gray level 63

L 0: Luminance of gray level 0

CR = CR(1)

CR (X) is corresponding to the Contrast Ratio of the point X at Figure in Note (6).

Note (3) Definition of Response Time (T<sub>R</sub>, T<sub>F</sub>):

Note (4) Definition of Average Luminance of White (LAVE):

Measure the luminance of gray level 63 at 5 points

 $L_{AVE} = [L(1) + L(2) + L(3) + L(4) + L(5)] / 5$ 

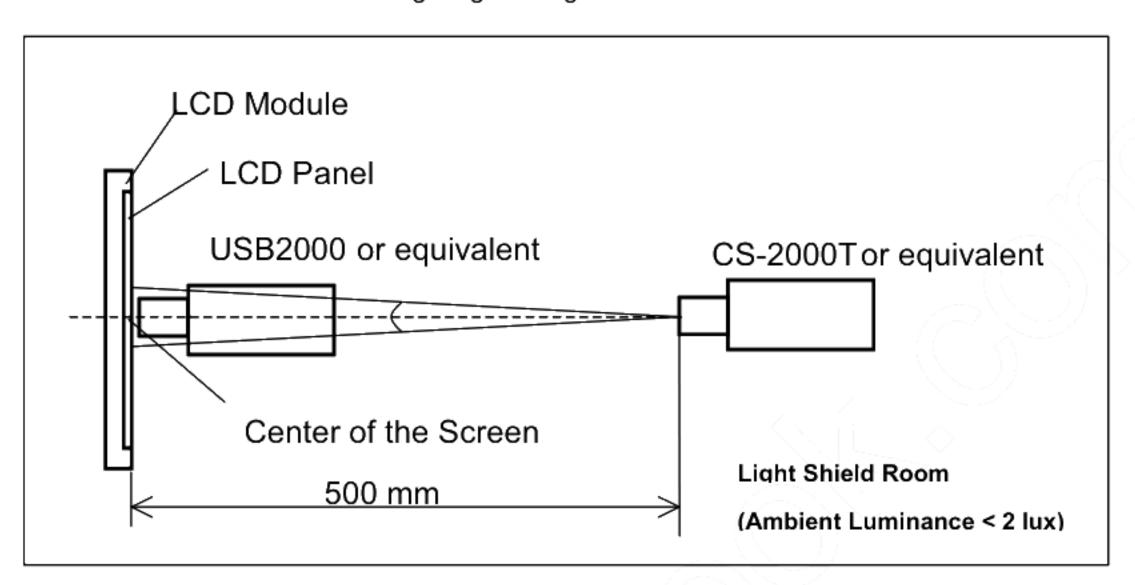

L (x) is corresponding to the luminance of the point X at Figure in Note (6)

#### Note (5) Measurement Setup:

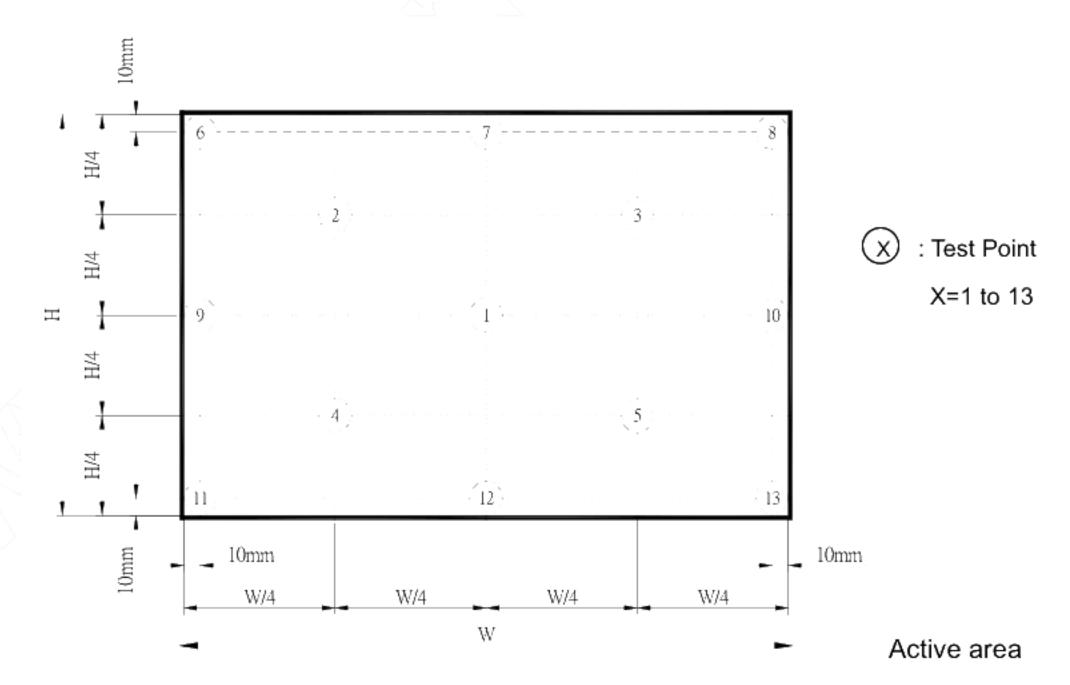

The LCD module should be stabilized at given temperature for 20 minutes to avoid abrupt temperature change during measuring. In order to stabilize the luminance, the measurement should be executed after lighting Backlight for 20 minutes in a windless room.

#### Note (6) Definition of White Variation ( $\delta W$ ):

Measure the luminance of gray level 63 at 5 points

 $\delta W_{5p} = \{Minimum [L (1) \sim L (5)] / Maximum [L (1) \sim L (5)]\}*100\%$ 

Note (7) The listed optical specifications refer to the initial value of manufacture, but the condition of the specifications after long-term operation will not be warranted.

Version 1.0 17 July 2013 20 / 36

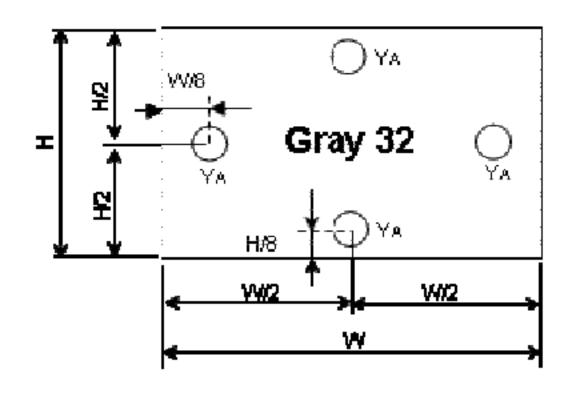

Note (8) Cross Talk (CT):

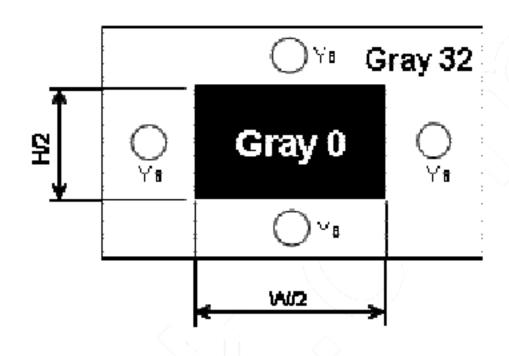

CT= 
$$|Y_B|$$
  $Y_A$   $|Y_A|$  ×100%

Where

Y<sub>A</sub>=Luminance of measured location in left figure

Y<sub>B</sub>=Luminance of measured location in right figure

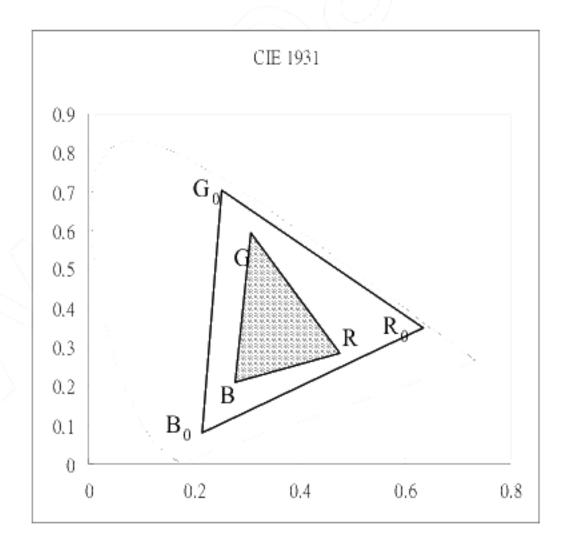

Note (9) Definition of color gamut (C.G%):

R<sub>0</sub>, G<sub>0</sub>, B<sub>0</sub>: CIE1931 coordinates of red, green, and blue defined by NTSC.

R, G, B: CIE1931 coordinates of red, green, and blue in module at 63 gray level.

Area (R<sub>0</sub>, G<sub>0</sub>, B<sub>0</sub>): Area of the triangle defined by coordinate R0, G0, B0.

Area(R, G, B): Area of the triangle defined by coordinate R, G, B

ESD Test (Operation)	150pF, 330 Ω, 1sec/cycle Condition 1 : Contact Discharge, ±8KV Condition 2 : Air Discharge, ±15KV	(1)
Shock (Non-Operating)	220G, 2ms, half sine wave,1 time for each direction of ±X,±Y,±Z	(1)(3)
Vibration (Non-Operating)	1.5G / 10-500 Hz, Sine wave, 30 min/cycle, 1cycle for each X, Y, Z	(1)(3)

Note (1) criteria: Normal display image with no obvious non-uniformity and no line defect.

Note (2) Evaluation should be tested after storage at room temperature for more than two hour

Note (3) At testing Vibration and Shock, the fixture in holding the module has to be hard and rigid enough so that the module would not be twisted or bent by the fixture.

#### 8. PRECAUTIONS

#### 8.1 HANDLING PRECAUTIONS

- (1) The module should be assembled into the system firmly by using every mounting hole. Be careful not to twist or bend the module.
- (2) While assembling or installing modules, it can only be in the clean area. The dust and oil may cause electrical short or damage the polarizer.
- (3) Use fingerstalls or soft gloves in order to keep display clean during the incoming inspection and assembly process.
- (4) Do not press or scratch the surface harder than a HB pencil lead on the panel because the polarizer is very soft and easily scratched.
- (5) If the surface of the polarizer is dirty, please clean it by some absorbent cotton or soft cloth. Do not use Ketone type materials (ex. Acetone), Ethyl alcohol, Toluene, Ethyl acid or Methyl chloride. It might permanently damage the polarizer due to chemical reaction.
- (6) Wipe off water droplets or oil immediately. Staining and discoloration may occur if they left on panel for a long time.
- (7) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth. In case of contacting with hands, legs or clothes, it must be washed away thoroughly with soap.
- (8) Protect the module from static electricity, it may cause damage to the C-MOS Gate Array IC.
- (9) Do not disassemble the module.
- (10) Do not pull or fold the LED wire.
- (11) Pins of I/F connector should not be touched directly with bare hands.

#### 8.2 STORAGE PRECAUTIONS

- (1) High temperature or humidity may reduce the performance of module. Please store LCD module within the specified storage conditions.
- (2) It is dangerous that moisture come into or contacted the LCD module, because the moisture may damage LCD module when it is operating.
- (3) It may reduce the display quality if the ambient temperature is lower than 10 °C. For example, the response time will become slowly, and the starting voltage of LED will be higher than the room temperature.

#### 8.3 OPERATION PRECAUTIONS

- Do not pull the I/F connector in or out while the module is operating.
- (2) Always follow the correct power on/off sequence when LCD module is connecting and operating. This can prevent the CMOS LSI chips from damage during latch-up.
- (3) The startup voltage of Backlight is approximately 1000 Volts. It may cause electrical shock while assembling with converter. Do not disassemble the module or insert anything into the Backlight unit.
