## TFT COLOR LCD MODULE

NL6448BC33-71D

26cm (10.4 Type) VGA LVDS interface (1port)

### PRELIMINARY DATA SHEET

DOD-PP-0696(3rd edition)

This PRELIMINARY DATA SHEET is updated document from DOD-PP-682(2)

All information is subject to change without notice. Please confirm the sales representative before starting to design your system.

#### INTRODUCTION

The Copyright to this document belongs to NEC LCD Technologies, Ltd. (hereinafter called "NEC"). No part of this document will be used, reproduced or copied without prior written consent of NEC.

NEC does and will not assume any liability for infringement of patents, copyrights or other intellectual property rights of any third party arising out of or in connection with application of the products described herein except for that directly attributable to mechanisms and workmanship thereof. No license, express or implied, is granted under any patent, copyright or other intellectual property right of NEC.

Some electronic parts/components would fail or malfunction at a certain rate. In spite of every effort to enhance reliability of products by NEC, the possibility of failures and malfunction might not be avoided entirely. To prevent the risks of damage to death, human bodily injury or other property arising out thereof or in connection therewith, each customer is required to take sufficient measures in its safety designs and plans including, but not limited to, redundant system, fire-containment and anti-failure.

The products are classified into three quality grades: "Standard", "Special", and "Specific" of the highest grade of a quality assurance program at the choice of a customer. Each quality grade is designed for applications described below. Any customer who intends to use a product for application other than that of Standard quality grade is required to contact an NEC sales representative in advance.

The **Standard** quality grade applies to the products developed, designed and manufactured in accordance with the NEC standard quality assurance program, which are designed for such application as any failure or malfunction of the products (sets) or parts/components incorporated therein a customer uses are, directly or indirectly, free of any damage to death, human bodily injury or other property, like general electronic devices.

Examples: Computers, office automation equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment, industrial robots, etc.

The **Special** quality grade applies to the products developed, designed and manufactured in accordance with an NEC quality assurance program stricter than the standard one, which are designed for such application as any failure or malfunction of the products (sets) or parts/components incorporated therein a customer uses might directly cause any damage to death, human bodily injury or other property, or such application under more severe condition than that defined in the Standard quality grade without such direct damage.

Examples: Control systems for transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, medical equipment not specifically designed for life support, safety equipment, etc.

The **Specific** quality grade applies to the products developed, designed and manufactured in accordance with the standards or quality assurance program designated by a customer who requires an extremely higher level of reliability and quality for such products.

Examples: Military systems, aircraft control equipment, aerospace equipment, nuclear reactor control systems, medical equipment/devices/systems for life support, etc.

The quality grade of this product is the "Standard" unless otherwise specified in this document.

#### 1. OUTLINE

#### 1.1 STRUCTURE AND PRINCIPLE

Color LCD module NL6448BC33-71D is composed of the amorphous silicon thin film transistor liquid crystal display (a-Si TFT LCD) panel structure with driver LSIs for driving the TFT (Thin Film Transistor) array and a backlight.

The a-Si TFT LCD panel structure is injected liquid crystal material into a narrow gap between the TFT array glass substrate and a color-filter glass substrate.

Color (Red, Green, Blue) data signals from a host system (e.g. signal generator, etc.) are modulated into best form for active matrix system by a signal processing circuit, and sent to the driver LSIs which drive the individual TFT arrays.

The TFT array as an electro-optical switch regulates the amount of transmitted light from the backlight assembly, when it is controlled by data signals. Color images are created by regulating the amount of transmitted light through the TFT array of red, green and blue dots.

#### 1.2 APPLICATION

For industrial use

#### 1.3 FEATURES

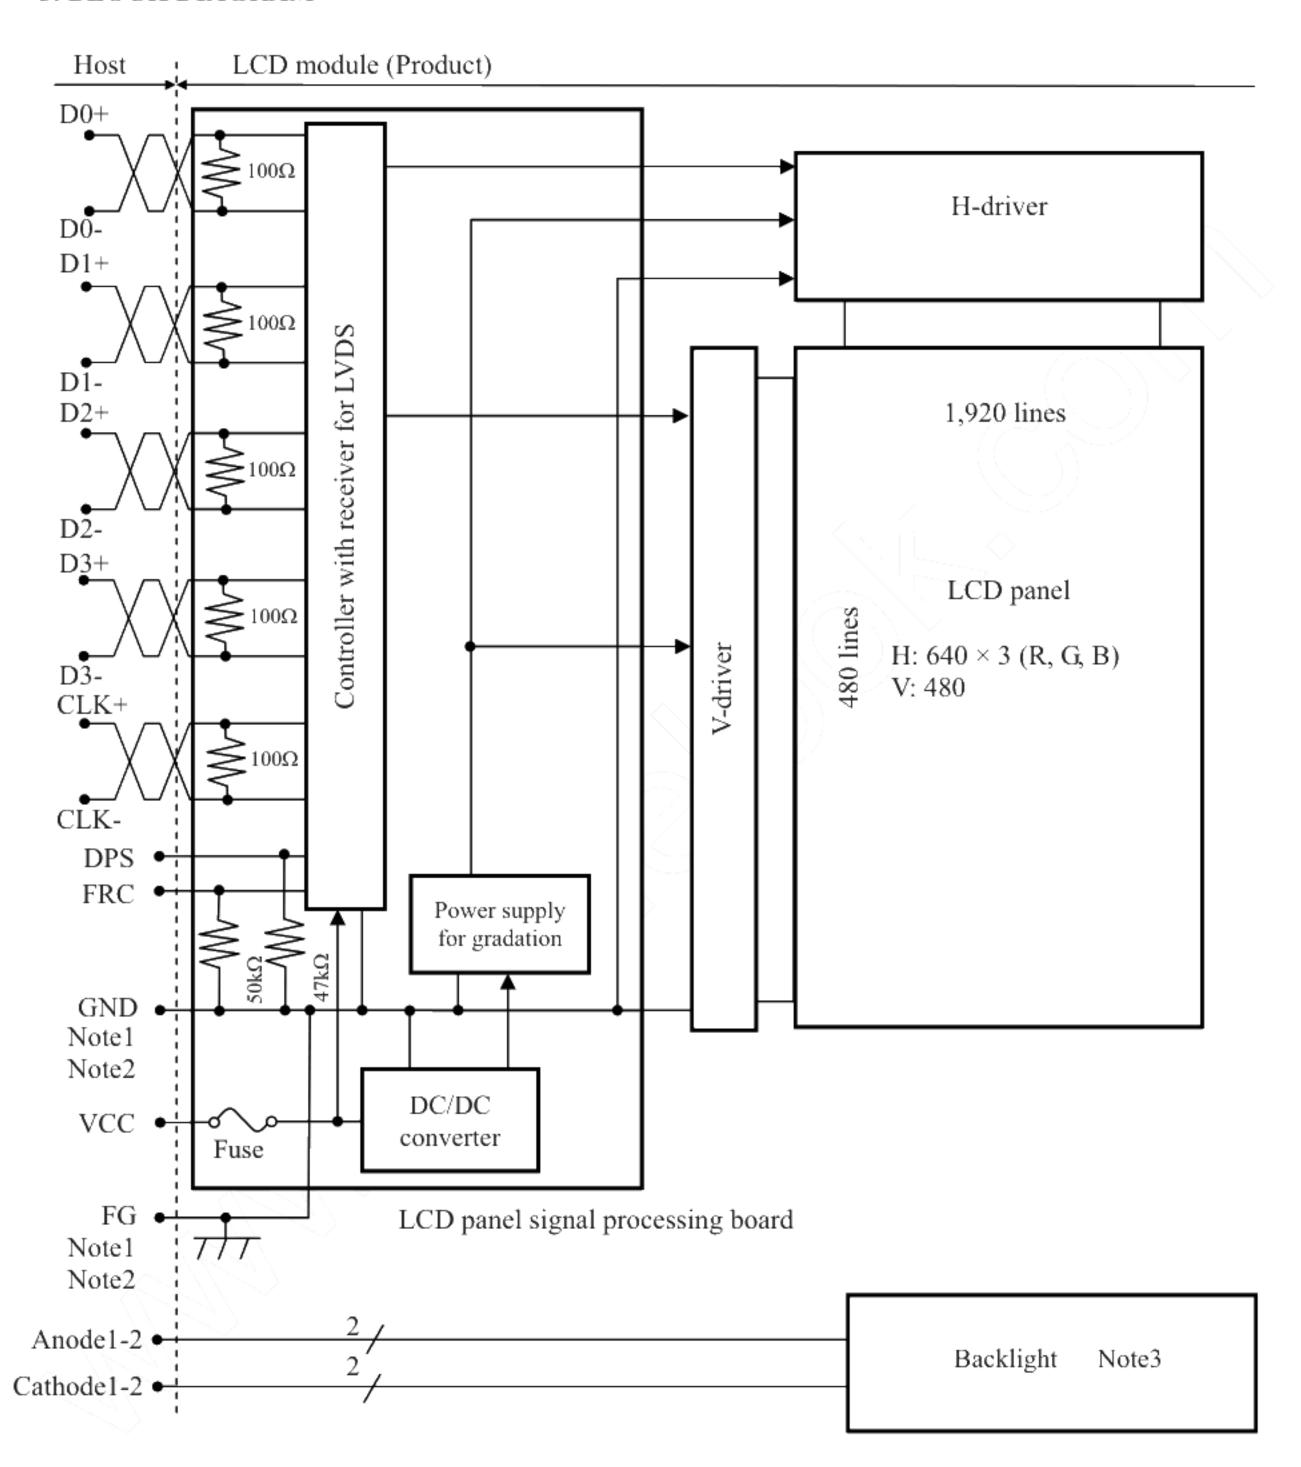

- High luminance
- High contrast
- Wide viewing angle
- LVDS interface
- Reversible-scan direction
- Selectable 8bit or 6bit digital signals for data of RGB
- LED backlight type
- Replaceable lamp holder for backlight

#### 2. GENERAL SPECIFICATIONS

Display area	211.2 (H) × 158.4 (V) mm
Diagonal size of display	26cm (10.4 inches)
Drive system	a-Si TFT active matrix
Display color	16,777,216 colors (At 8-bit input, FRC terminal= High) 262,144 colors (At 6-bit input, FRC terminal= Low or Open)
Pixel	640 (H) × 480 (V) pixels
Pixel arrangement	RGB (Red dot, Green dot, Blue dot) vertical stripe
Dot pitch	0.11 (H) × 0.33 (V) mm
Pixel pitch	0.33 (H) × 0.33 (V) mm
Module size	243.0 (W) × 185.1 (H) × 10.5 (D) mm (typ.)
Weight	(475) g (typ.)
Contrast ratio	(600):1 (typ.)
Viewing angle	At the contrast ratio ≥10:1  • Horizontal: Right side 80° (typ.), Left side 80° (typ.)  • Vertical: Up side 80° (typ.), Down side 60° (typ.)
Designed viewing direction	<ul> <li>At DPS= Low or open: Normal scan</li> <li>Viewing direction without image reversal: up side (12 o'clock)</li> <li>Viewing direction with contrast peak: down side (6 o'clock)</li> <li>Viewing angle with optimum grayscale (γ≒2.2): normal axis (perpendicular)</li> </ul>
Polarizer surface	Antiglare
Polarizer pencil-hardness	3H (min.) [by JIS K5400]
Color gamut	At LCD panel center 40% (typ.) [against NTSC color space]
Response time	$Ton+Toff (10\% \longleftrightarrow 90\%)$ 25ms (typ.)
Luminance	At IL = 50mA (450) cd/m <sup>2</sup> (typ.)
Signal system	LVDS 1port (Receiver: THC63LVDF84B, THine Electronics Inc. or equivalent) [8bit/6bit digital signals for data of RGB colors, Dot clock (CLK), Data enable (DE)]
Power supply voltage	LCD panel signal processing board: 3.3V
Backlight	LED backlight type:  (Replaceable part  • Lamp holder set: Type No. TBD
Power consumption	At IL=50mA, Checkered flag pattern (4.0)W (typ.)

#### 3. BLOCK DIAGRAM

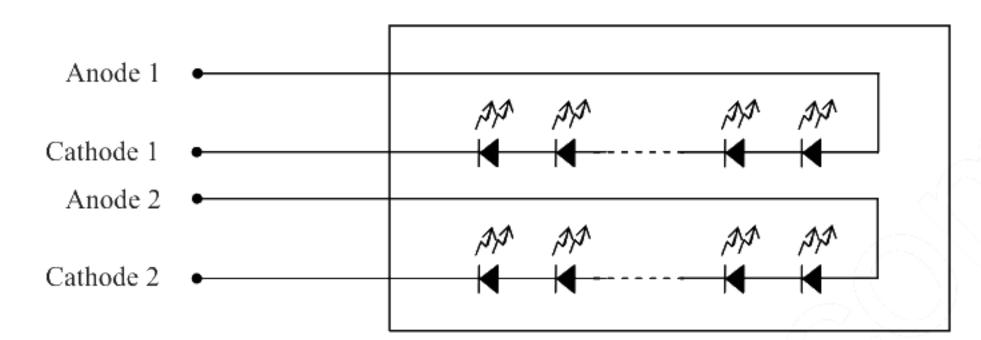

Note1: Relations between GND (Signal ground) and FG (Frame ground) in the LCD module are as follows.

GND - FG Connected

Note2: GND and FG must be connected to customer equipment's ground, and it is recommended that these grounds are connected together in customer equipment.

Note3: Backlight in detail

#### 4. DETAILED SPECIFICATIONS

#### 4.1 MECHANICAL SPECIFICATIONS

Parameter	Specification		Unit
Module size	$243.0 \pm 0.5 \text{ (W)} \times 185.1 \pm 0.5 \text{ (H)} \times 10.5 \pm 0.5 \text{ (D)}$	Note1	mm
Display area	211.2 (H) × 158.4 (V)	Notel	mm
Weight	(475) (typ.), TBD (max.)	d	g

Note1: See "7. OUTLINE DRAWINGS".

#### 4.2 ABSOLUTE MAXIMUM RATINGS

	Parameter		Symbol	Rating	Unit	Remarks
Power supply voltage	LCD panel signal	processing board	VCC	-0.3 to +4.0	O V	
Input voltage for	Display No	_	VD	0.2 - 1/00/0.2	17	-
signals	Function No	_	VF	-0.3 to VCC+0.3	V	
Dogleliecht	Power di	ssipation	PD	TBD	W	per one circuit
Backlight	Forward	current	IL	TBD	mA	per one circuit
	Storage temperature		Tst	-30 to +80	°C	-
Operating	annaratura	Front surface	TopF	-20 to +70	°C	Note3
Operating	emperature	Rear surface	TopR	-20 to +70	°C	Note4
				≤ 95	%	Ta ≤ 40°C
	Relative humidity		DU	≤ 85	%	40°C <ta≤ 50°c<="" td=""></ta≤>
	Note5		RH	≤ 55	%	50°C <ta≤ 60°c<="" td=""></ta≤>
			≤ 36	%	60°C <ta≤ 70°c<="" td=""></ta≤>	
	Absolute humidity Note5		АН	≤ 70 Note6	g/m³	Ta> 70°C

Note1: D0+/-, D1+/-, D2+/-, D3+/-, CLK+/-

Note2: DPS, FRC

Note3: Measured at center of LCD panel surface (including self-heat)

Note4: Measured at center of LCD module's rear shield surface (including self-heat)

Note5: No condensation

Note6: Water amount at Ta= 70°C and RH= 36%

#### 4.3 ELECTRICAL CHARACTERISTICS

#### 4.3.1 LCD panel signal processing board

 $(Ta = 25^{\circ}C)$ 

Parameter		Symbol	min.	typ.	max.	Unit	Remarks		
Power supply voltage		VCC	3.0	3.3	3.6	V	-		
Power supply current	ICC	-	310 Note1	430 Note2	mA	at VCC= 3.3V			
Permissible ripple voltage		VRP	-	-	100	mVp-p	for VCC		
Differential input	High	VTH	-	-	+100	mV	at VCM= 1.2V		
threshold voltage	ltage Low		ld voltage Low		-100	-	-	mV	Note3
Terminating resistance		RT	-	100	/ <u>-</u>	Ω	-		
Input voltage for	High	VFH	0.7VCC	-	VCC	V	CMOS level		
DPS and FRC signals	Low	VFL	0	((	0.3VCC	V	CIVIOS level		
Input current for FRC	High	IFH	-		300	μА			
signal	Low	IFL	-300		-	μA	-		

Note1: Checkered flag pattern [by EIAJ ED-2522]

Note2: Pattern for maximum current

Note3: Common mode voltage for LVDS receiver

#### 4.3.2 Backlight lamp

(Ta=25°C, Note1, Note2)

Parameter	Symbol	min.	typ.	max.	Unit	Remarks
Forward current	IL	-	50.0	55.0	mA	-
Forward Voltage	VL	-	29.7	34.2	V	at IL= 50 mA

Note1: Please drive with constant current.

Note2: The Luminance uniformity may be changed depending on the current variation between 2 circuits. It is recommended that the current value difference between each circuit is less than 5%.

#### 4.3.3 Power supply voltage ripple

This product works, even if the ripple voltage levels are beyond the permissible values as following the table, but there might be noise on the display image.

Power sup	ply voltage	Ripple voltage Note1 (Measure at input terminal of power supply)	Unit
VCC	3.3V	≤ 100	mVp-p

Note1: The permissible ripple voltage includes spike noise.

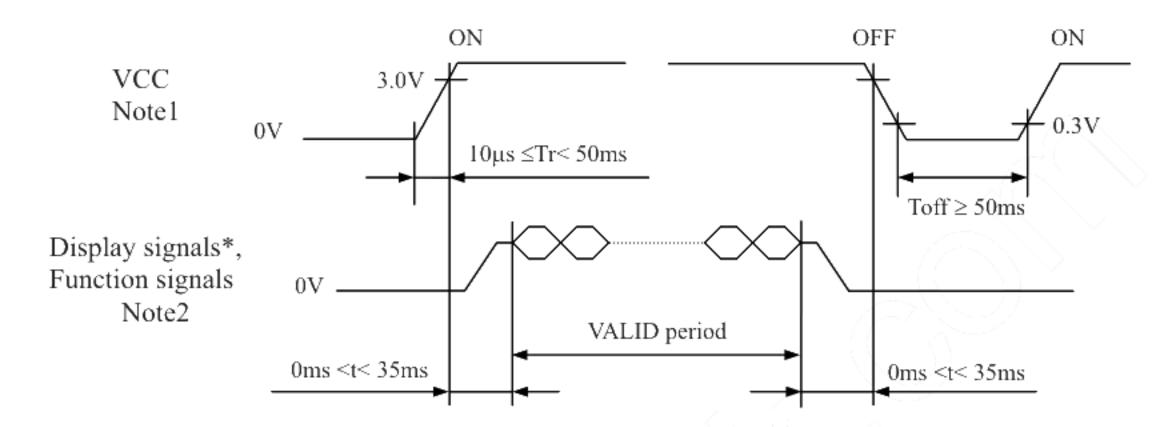

#### 4.3.4 Fuse

Parameter		Fuse	Pating	Fusing current	Remarks	
	Туре	Supplier	Rating	Fusing current	Kemarks	
VCC	FCC16162AB	KAMAYA	1.6A	3.2A	Note1	
	PCC10102AB	ELECTRIC Co., Ltd.	32V	3.2A	Note1	

Note1: The power supply capacity should be more than the fusing current. If it is less than the fusing current, the fuse may not blow in a short time, and then nasty smell, smoke and so on may occur.

#### 4.4 POWER SUPPLY VOLTAGE SEQUENCE

#### 4.4.1 LCD panel signal processing board

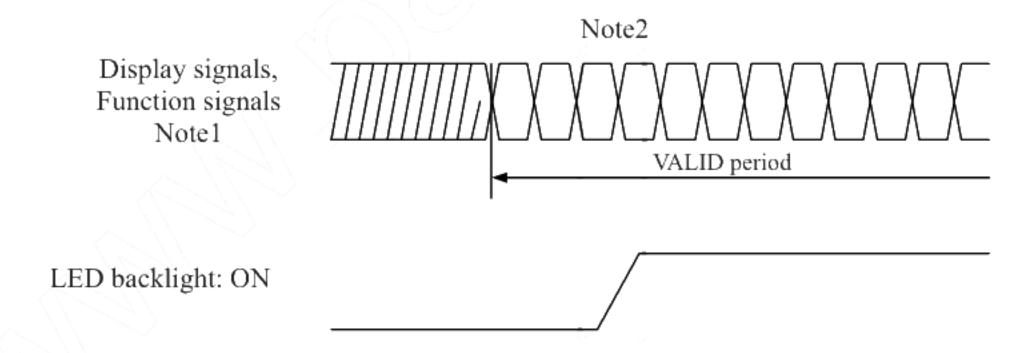

\* These signals should be measured at the terminal of  $100\Omega$  resistance.

Note1: In terms of voltage variation (voltage drop) while VCC rising edge is below 3.0V, a protection circuit may work, and then this product may not work.

Note2: Display signals (D0+/-, D1+/-, D2+/-, D3+/- and CLK+/-) and function signals (DPS and FRC) must be Low or High-impedance, exclude the VALID period (See above sequence diagram), in order to avoid that internal circuits is damaged.

If some of display and function signals of this product are cut while this product is working, even if the signal input to it once again, it might not work normally. VCC should be cut when the display and function signals are stopped.

#### 4.4.2 Backlight lighting circuit

Note1: These are the display and function signals for LCD panel signal processing board.

Note2: The backlight should be turned on within the valid period of display and function signals, in order to avoid unstable data display.

#### 4.5 CONNECTIONS AND FUNCTIONS FOR INTERFACE PINS

#### 4.5.1 LCD panel signal processing board

CN1 socket (LCD module side): FI-SE20P-HFE (Japan Aviation Electronics Industry Limited (JAE))
Adaptable plug: FI-S20S (Japan Aviation Electronics Industry Limited (JAE))

Pin	No.	Symbol	Signal		Remarks							
,	A	D3+	Pixel data		Note1, Note2

7	N.C.	-	Keep this pin Open.
8	N.C.	-	Keep this pin Open.

#### 4.5.3 Positions of plug and socket

- 4.5.4 Connection between receiver and transmitter for LVDS
- (1) Input data signal: 8bit

Note1: Recommended transmitter THC63LVDM83R (THine Electronics Inc.) or equivalent

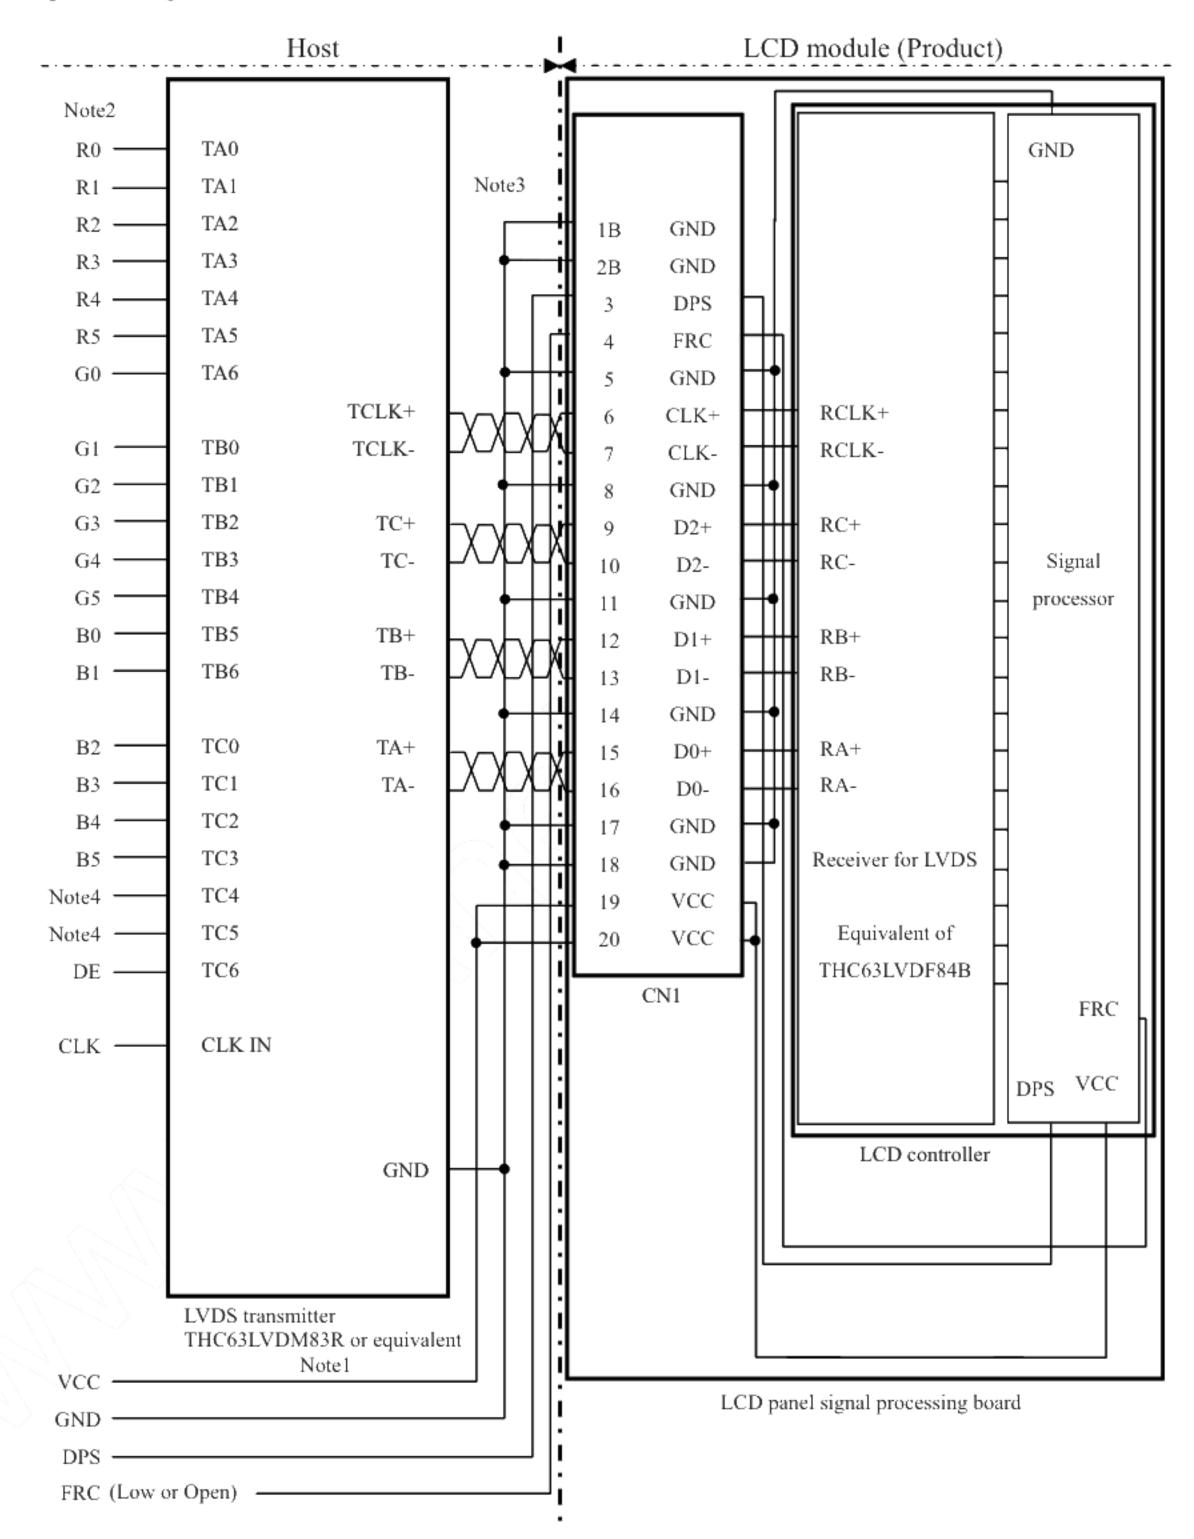

Note2: LSB (Least Significant Bit) - R0, G0, B0 MSB (Most Significant Bit) - R7, G7, B7

Note3: Twist pair wires with  $100\Omega$  (Characteristic impedance) should be used between LCD panel signal processing board and LVDS transmitter.

Note4: Input signals to TC4, TC5 and TD6 are not used inside the product, but do not keep TC4, TC5 and TD6 open to avoid noise problem.

#### (2) Input data signal: 6bit

Note1: Recommended transmitter THC63LVDM83R (THine Electronics Inc.) or equivalent

Note2: LSB (Least Significant Bit) - R0, G0, B0 MSB (Most Significant Bit) - R5, G5, B5

Note3: Twist pair wires with  $100\Omega$  (Characteristic impedance) should be used between LCD panel signal processing board and LVDS transmitter.

Note4: Input signals to TC4 and TC5 are not used inside the product, but do not keep TC4 and TC5 open to avoid noise problem.

#### 4.6 DISPLAY COLORS AND INPUT DATA SIGNALS

4.6.1 Combinations between input data signals and FRC signal

This product can display in equivalent to 16,777,216 colors in 256 gray scales and 262,144 colors in 64 gray scales by combination between input data signals and FRC signal. See the following table.

Combination	Input data signals	CN1-Pin No.1 and 2	FRC terminal	Display colors	Remarks
1	8-bit	D3+/-	High	16,777,216	Note1
2	6-bit	GND	Low or Open	262,144	Note2

Note1: See "4.6.2 16,777,216 colors". Note2: See "4.6.3 262,144 colors".

4.6.2 16,777,216 colors

This product can display equivalent of 16,777,216 colors in 256 gray scales by combination ①. (See "4.6.1 Combinations between input data signals and FRC signal".)

Also the relation between display colors and input data signals is as the following table.

Display colors									Data	ı sigı	nal (	0: L	юw	leve	el, 1	: Hi	gh le	vel)							
Display	COTOTS	R7	R6	R5	R4	R3	R2	RI	R0	G7	G6	G5	G4	G3	G2	G1	G0	В7	В6	В5	B4	В3	B2	<u>B</u> 1	В0

#### 4.7 DISPLAY POSITIONS

The following table is the coordinates per pixel (See "4.8 SCANNING DIRECTIONS".).

C (0,	0) B					
C(0, 0)	C( 1, 0)	• • •	C( X, 0)	• • •	C(638, 0)	C(639, 0)
C( 0, 1)	C( 1, 1)	• • •	C( X, 1)	• • •	C(638, 1)	C(639, 1)
	•	•	•	•	•//	$\triangle \cdot \triangle$
	•	• • •		• • •	• ( )	\ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \
•	•	•	•	•		<i>()</i>
C( 0, Y)	C( 1, Y)	• • •	C( X, Y)	• • •	C(638, Y)	C(639, Y)
	•	•	•	•		•
· ·	•	• • •			· ·	•
	•	•	•	<u> </u>		•
C( 0, 478)	C( 1, 478)	• • •	C( X, 478)		C(638, 478)	C(639, 478)
C( 0, 479)	C( 1, 479)	• • •	C( X, 479)		C(638, 479)	C(639, 479)

#### 4.8 SCANNING DIRECTIONS

The following figures are seen from a front view. Also the arrow shows the direction of scan.

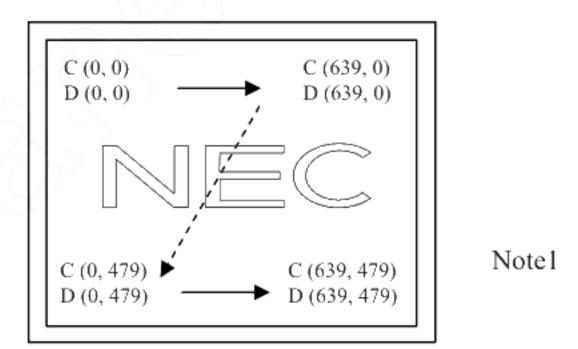

Figure 1. Normal scan (DPS: Low or Open)

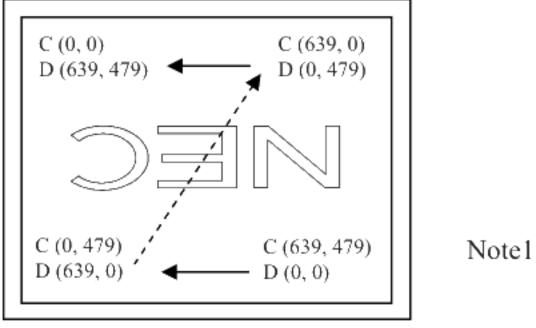

Figure 2. Reverse scan (DPS: High)

Note1: Meaning of C(X, Y) and D(X, Y)

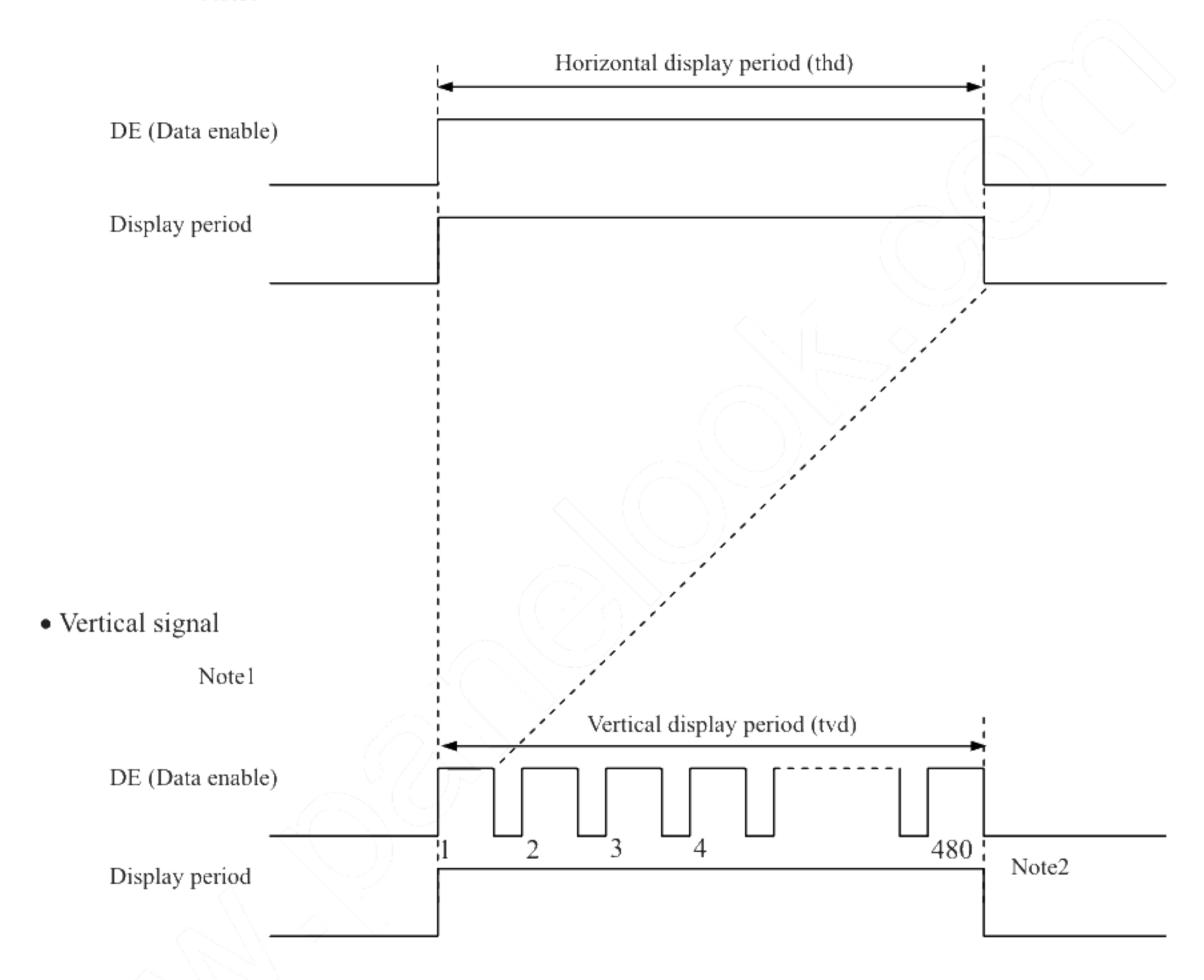

C (X, Y): The coordinates of the display position (See "4.7 DISPLAY POSITIONS".) D (X, Y): The data number of input signal for LCD panel signal processing board

#### 4.9 INPUT SIGNAL TIMINGS

- 4.9.1 Outline of input signal timings
- Horizontal signal

Note1

Note1: This diagram indicates virtual signal for set up to timing.

Note2: See "4.9.3 Input signal timing chart" for numeration of pulse.

#### NL6448BC33-71D

#### 4.9.2 Timing characteristics

(Note1, Note2, Note3)

							(	1, 110(02, 110(03)	
	Parameter			min.	typ.	max.	Unit	Remarks

	Down	θR= 0°, θL= 0°, CR≥ 10	θD	50	60	-	o		

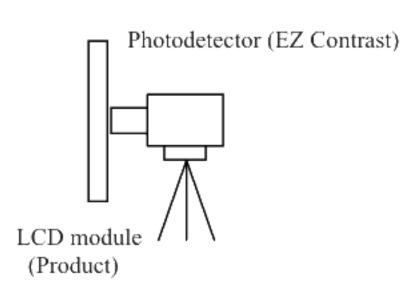

Note1: These are initial characteristics.

Note2: Measurement conditions are as follows.

Ta= 25°C, VCC= 3.3V, IL= 50mA, Display mode: VGA, Horizontal cycle= 1/31.468kHz, Vertical cycle= 1/59.94Hz, DPS= Low or Open: Normal scan

Optical characteristics are measured at luminance saturation after 20minutes from working the product, in the dark room. Also measurement methods are as follows.

Note3: See "4.10.2 Definition of contrast ratio".

Note4: See "4.10.3 Definition of luminance uniformity".

Note5: These coordinates are found on CIE 1931 chromaticity diagram.

Note6: Product surface temperature: TopF= TBD °C

Note7: See "4.10.4 Definition of response times".

Note8: See "4.10.5 Definition of viewing angles".

3

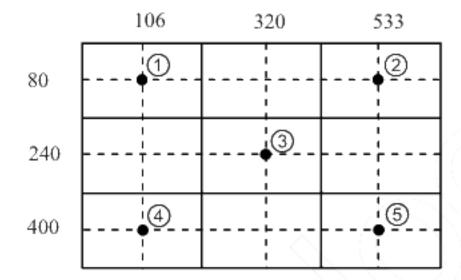

#### 4.10.2 Definition of contrast ratio

The contrast ratio is calculated by using the following formula.

#### 4.10.3 Definition of luminance uniformity

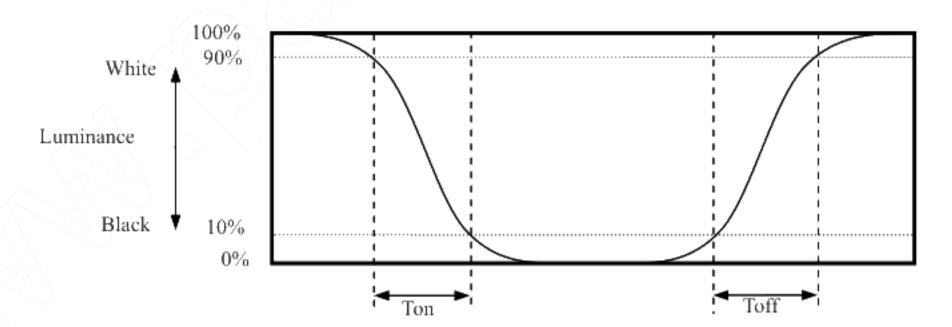

The luminance uniformity is calculated by using following formula.

The luminance is measured at near the 5 points shown below.

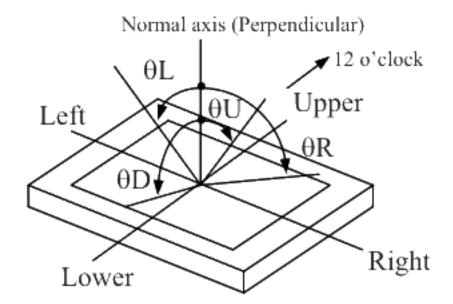

#### 4.10.4 Definition of response times

Response time is measured, the luminance changes from "white" to "black", or "black" to "white" on the same screen point, by photo-detector. Ton is the time it takes the luminance change from 90% down to 10%. Also Toff is the time it takes the luminance change from 10% up to 90% (See the following diagram.).

#### 4.10.5 Definition of viewing angles

#### 5. ESTIMATED LUMINANCE LIFETIME

The luminance lifetime is the time from initial luminance to half-luminance.

This lifetime is the estimated value, and is not guarantee value.

	Condition	Expected luminance lifetime Note1, Note2	Unit
LED elementary substance	25°C (Ambient temperature of LED) Continuous operation, IL=50mA	70,000	h
	70°C (Ambient temperature of LED) Continuous operation, IL=50mA	60,000	h

Note1: Expected luminance lifetime is not the value for LCD module but the value for LED elementary substance.

Note2: By ambient temperature, the lifetime changes particularly. Especially, in case the product works under high temperature environment, the lifetime becomes short.

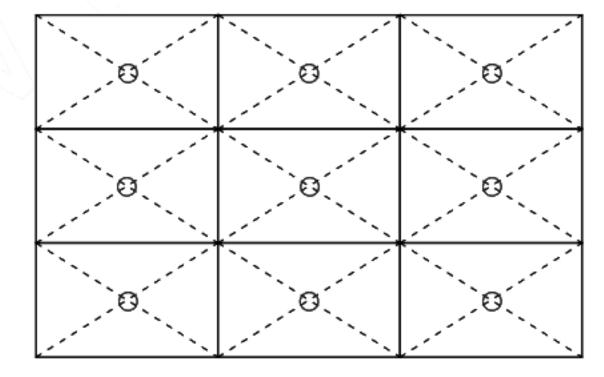

#### 6. RELIABILITY TESTS

(Note1)

Test item	Condition	Judgment		
High temperature and humidity (Operation)	① 60 ± 2°C, RH= 90%, 240hours ② Display data is black.			
High temperature (Operation)	<ul> <li>70 ± 3°C, 240hours</li> <li>Display data is black.</li> </ul>			
Heat cycle (Operation)	<ul> <li>① -20 ± 3°C1hour</li> <li>70 ± 3°C1hour</li> <li>② 50cycles, 4 hours/cycle</li> <li>③ Display data is black.</li> </ul>			
Thermal shock (Non operation)	<ul> <li>30 ± 3°C30minutes</li> <li>80 ± 3°C30minutes</li> <li>100cycles, 1hour/cycle</li> <li>Temperature transition time is within 5 minutes.</li> </ul>	No display malfunctions		
ESD (Operation)	<ul> <li>① 150pF, 150Ω, ±10kV</li> <li>② 9 places on a panel surface Note2</li> <li>③ 10 times each places at 1 sec interval</li> </ul>			
Dust (Operation)	<ul> <li>Sample dust: No. 15 (by JIS-Z8901))</li> <li>15 seconds stir</li> <li>8 times repeat at 1 hour interval</li> </ul>	•		
Vibration (Non operation)	<ul> <li>5 to 100Hz, 19.6m/s²</li> <li>1 minute/cycle</li> <li>X, Y, Z directions</li> <li>120 times each directions</li> </ul>	No display malfunctions		
Mechanical shock (Non operation)	<ul> <li>539m/ s², 11ms</li> <li>±X, ±Y, ±Z directions</li> <li>5 times each directions</li> </ul>	No physical damages		

Note1: Display and appearance are checked under environmental conditions equivalent to the inspection conditions of defect criteria.

Note2: See the following figure for discharge points.

3

3

# PRELIMINARY

#### 7. PRECAUTIONS

#### 7.1 MEANING OF CAUTION SIGNS

The following caution signs have very important meaning. Be sure to read "7.2 CAUTIONS" and "7.3 ATTENTIONS", after understanding these contents!

This sign has the meaning that customer will be injured by personnel or the product will sustain a damage, if customer has wrong operations.

This sign has the meaning that customer will be injured by personnel, if customer has wrong operations.

#### 7.2 CAUTIONS

\* Do not shock and press the LCD panel and the backlight! There is a danger of breaking, because they are made of glass. (Shock: To be not greater 539m/s² and to be not greater 11ms, Pressure: To be not greater 19.6 N (φ16mm jig))

### 7.3 ATTENTIONS

#### 7.3.1 Handling of the product

- Take hold of both ends without touching the circuit board when the product (LCD module) is picked up from inner packing box to avoid broken down or misadjustment, because of stress to mounting parts on the circuit board.
- ② When the product is put on the table temporarily, display surface must be placed downward.
- ③ When handling the product, take the measures of electrostatic discharge with such as earth band, ionic shower and so on, because the product may be damaged by electrostatic.
- ④ The torque for product mounting screws must never exceed 0.294N·m. Higher torque might result in distortion of the bezel.
- ⑤ The product must be installed using mounting holes without undue stress such as bends or twist (See outline drawings). And do not add undue stress to any portion (such as bezel flat area). Bends or twist described above and undue stress to any portion may cause display mura.
- ⑥ Do not press or rub on the sensitive product surface. When cleaning the product surface, wipe it a soft dry cloth.
- ① Do not push nor pull the interface connectors while the product is working.
- When handling the product, use of an original protection sheet on the product surface (polarizer) is recommended for protection of product surface. Adhesive type protection sheet may change color or characteristics of the polarizer.
- ① Usually liquid crystals don't leak through the breakage of glasses because of the surface tension of thin layer and the construction of LCD panel. But, if you contact with liquid crystal for the worst, please wash it out with soap.

#### 7.3.2 Environment

- ① Do not operate or store in high temperature, high humidity, dewdrop atmosphere or corrosive gases. Keep the product in packing box with antistatic pouch in room temperature to avoid dusts and sunlight, when storing the product.
- ② In order to prevent dew condensation occurring by temperature difference, the product packing box should be opened after enough time being left under the environment of an unpacking room. Evaluate the leaving time sufficiently because a situation of dew condensation occurring is changed by the environmental temperature and humidity. (Recommended leaving time: 6 hours or more with packing state)
- 3 Do not operate in high magnetic field. Circuit boards may be broken down by it.
- This product is not designed as radiation hardened.

#### 7.3.3 Characteristics

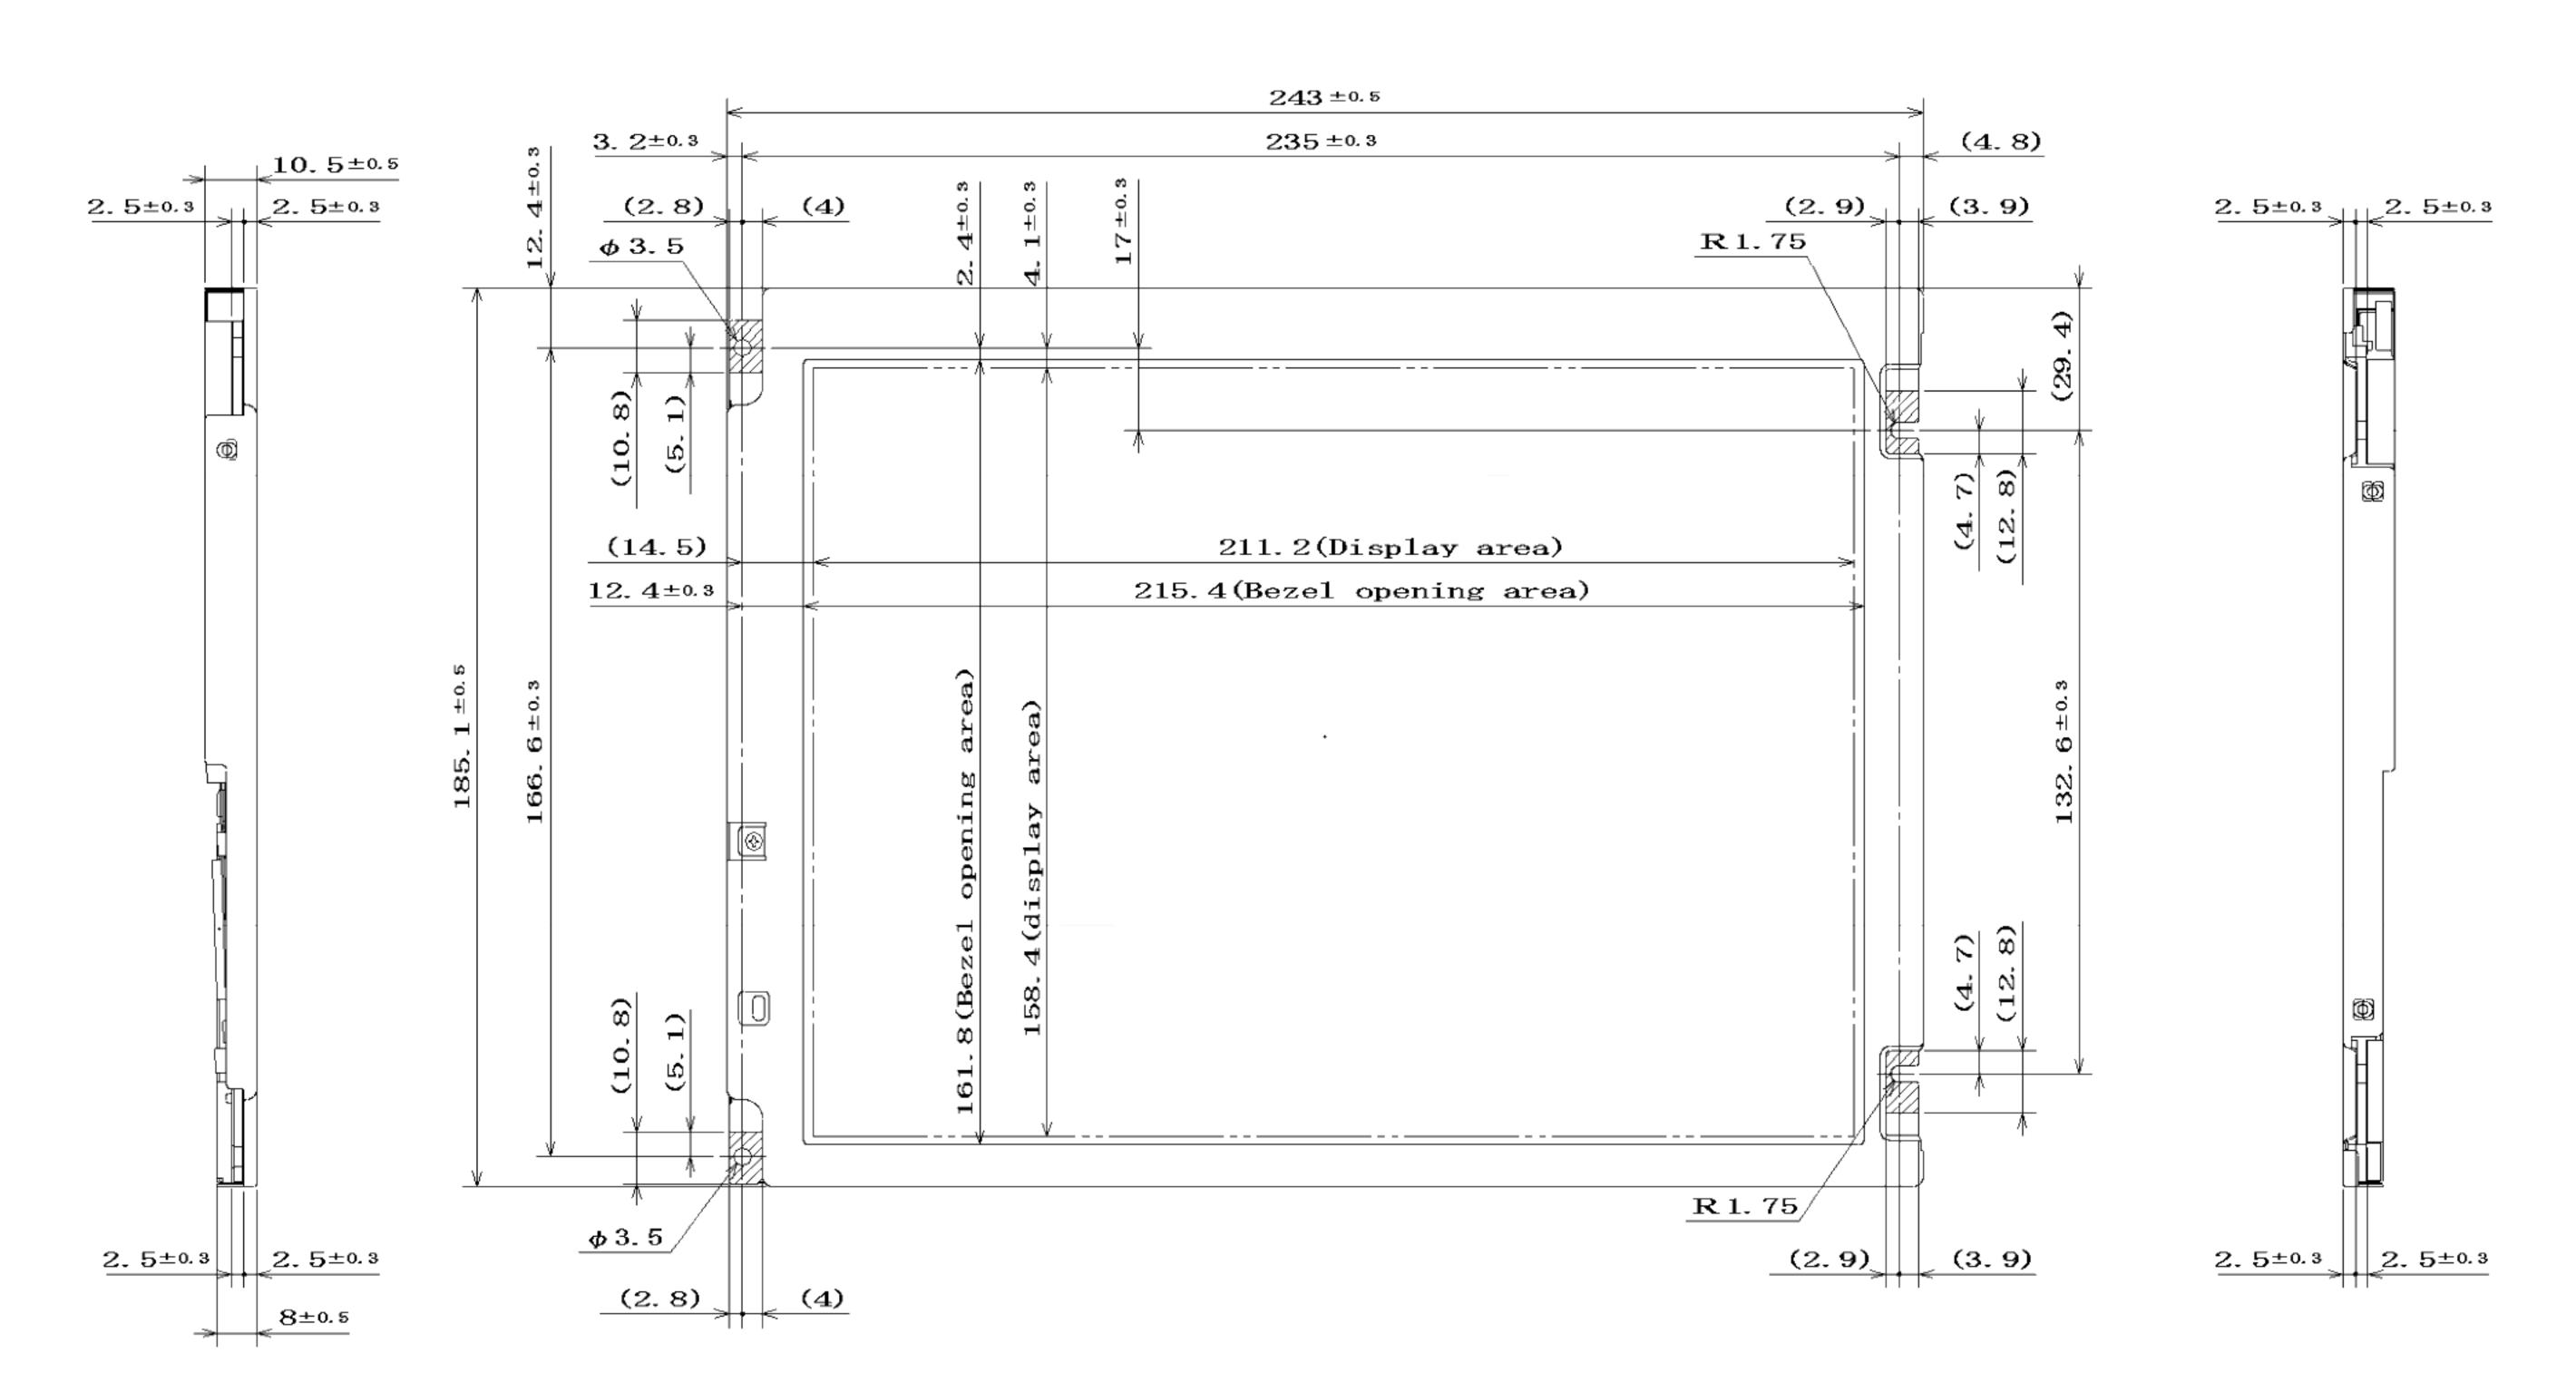

#### The following items are neither defects nor failures.

- ① Characteristics of the LCD (such as response time, luminance, color uniformity and so on) may be changed depending on ambient temperature. If the product is stored under condition of low temperature for a long time, it may cause display mura. In this case, the product should be operated after enough time being left under condition of operating temperature.
- ② Display mura, flicker, vertical seam or small spot may be observed depending on display patterns.
- 3 Do not display the fixed pattern for a long time because it may cause image sticking. Use a screen saver, if the fixed pattern is displayed on the screen.
- The display color may be changed depending on viewing angle because of the use of condenser sheet in the backlight.
- ⑤ Optical characteristics may be changed depending on input signal timings.

#### 7.3.4 Other

- ① All VCC and GND terminals should be used without any non-connected lines.
- ② Do not disassemble a product or adjust variable resistors.
- ③ See "REPLACEMENT MANUAL FOR LAMP HOLDER SET", when replacing LED holder.
- Pay attention not to insert foreign materials inside of the product, when using tapping screws.
- ⑤ Pack the product with original shipping package, in order to avoid any damages during transportation, when returning the product to NEC for repair and so on.

#### 8. OUTLINE DRAWINGS 8.1 FRONT VIEW

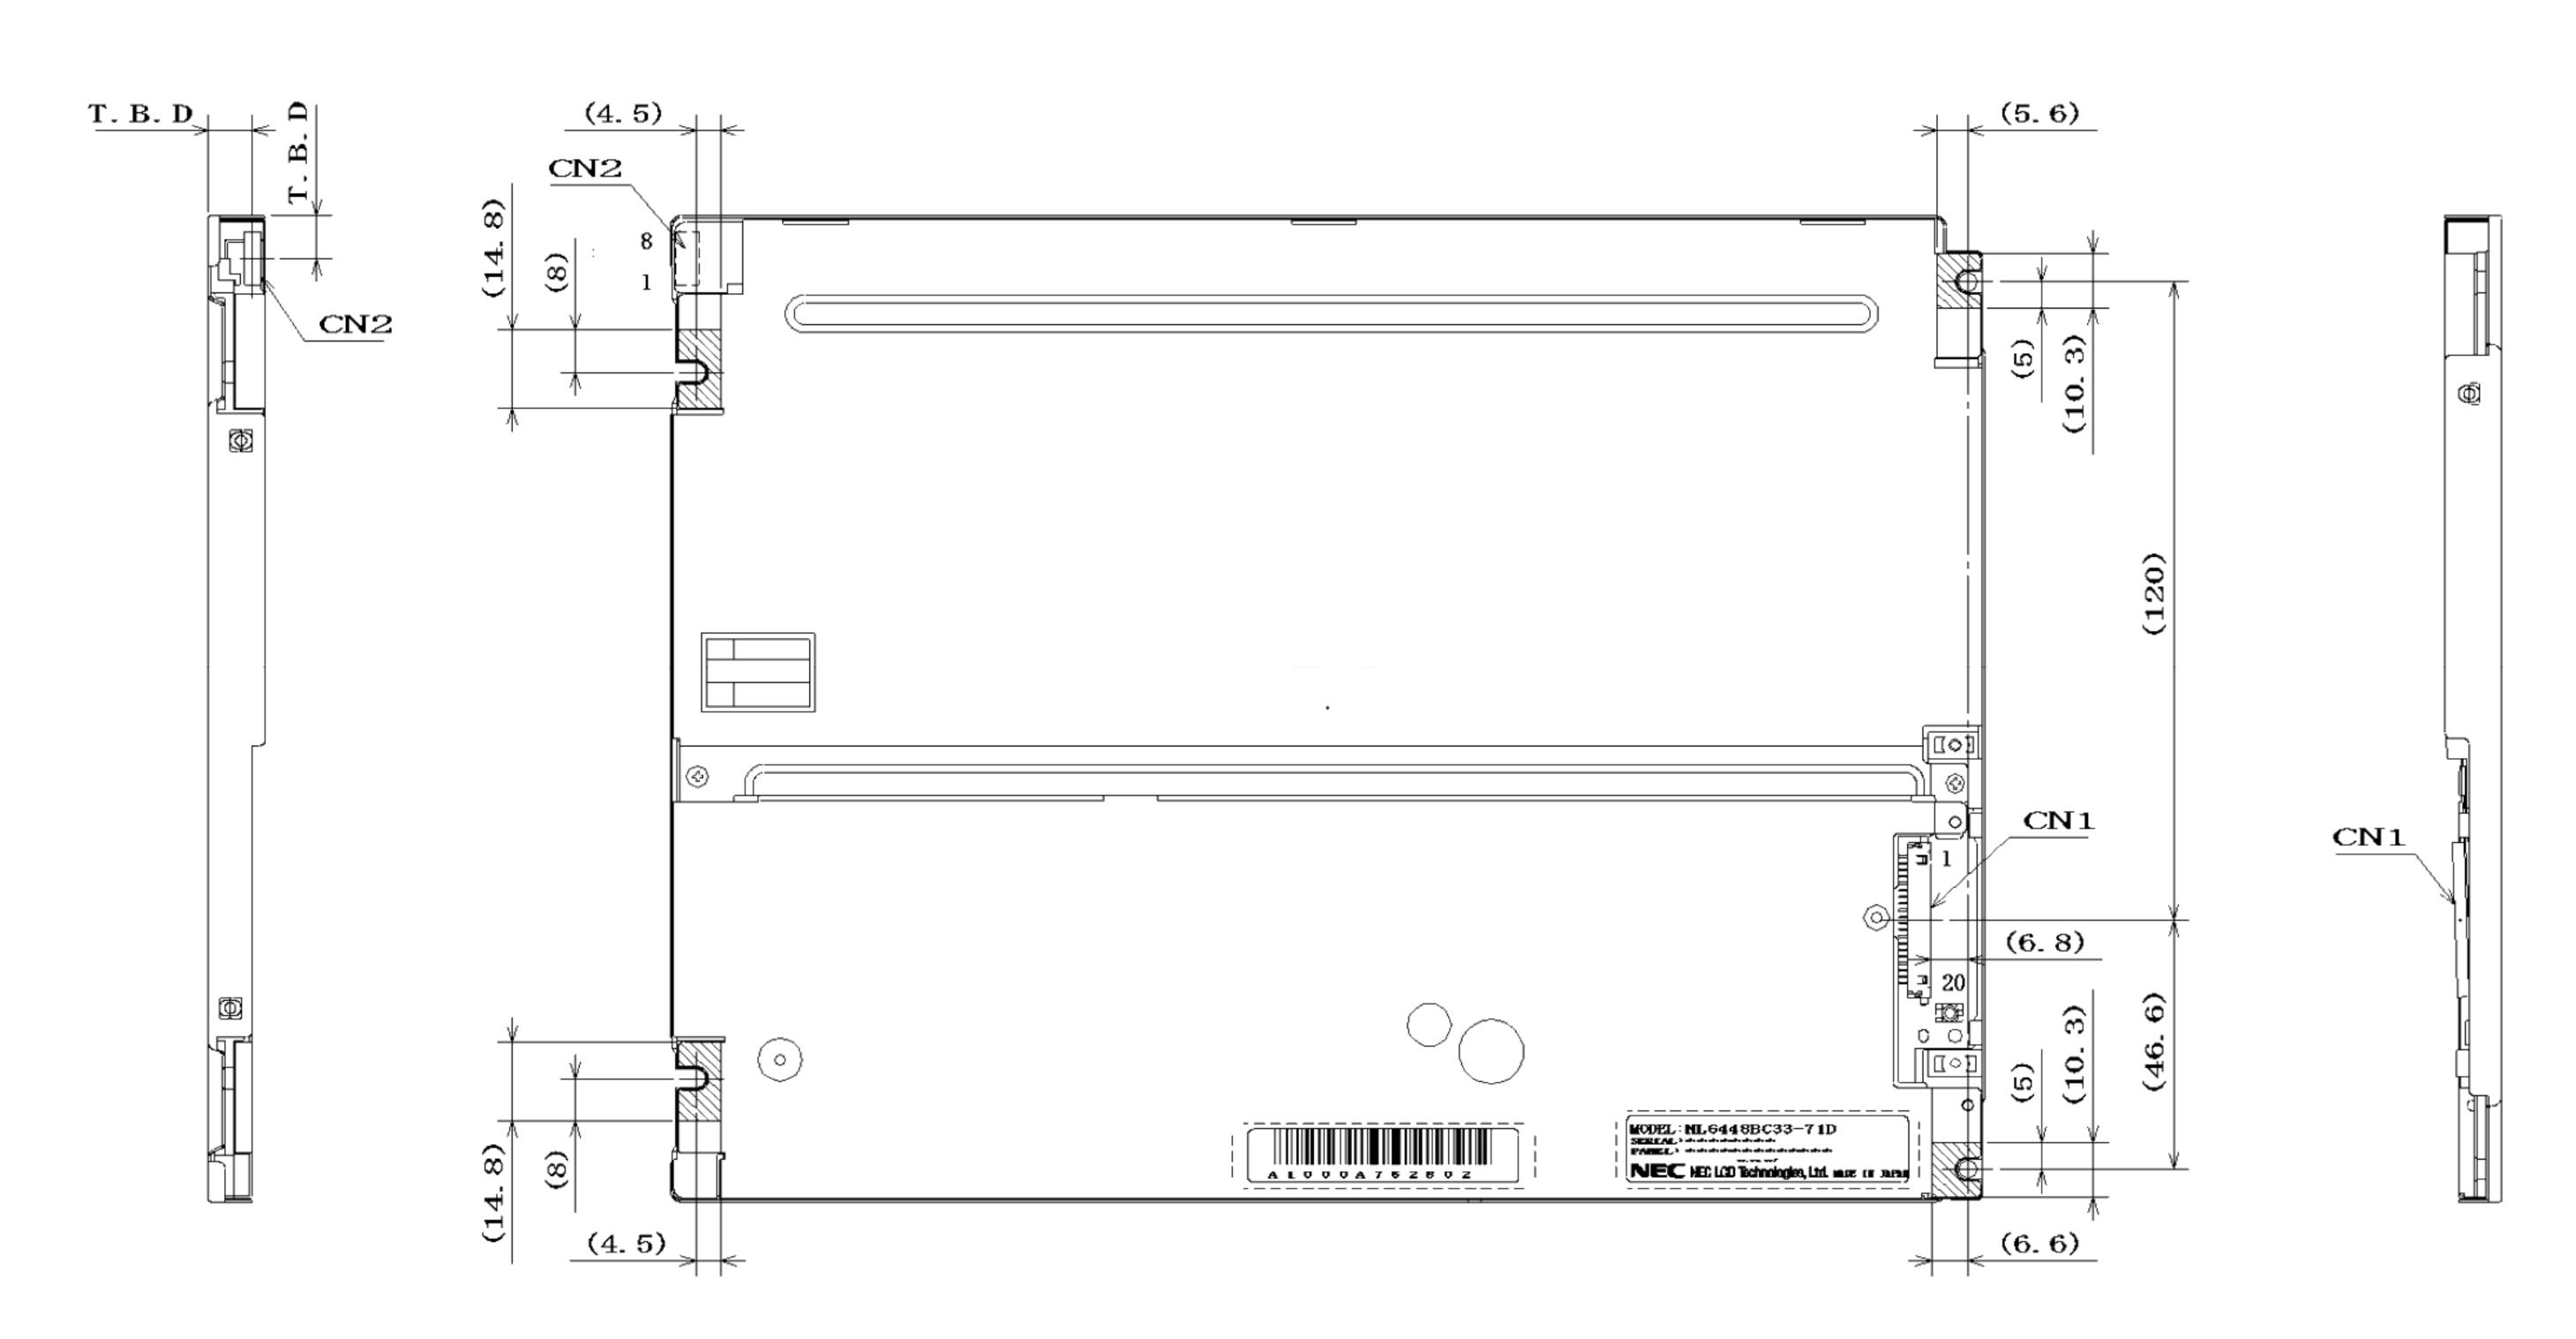

Unit: mm

Note1: The values in parentheses are for reference.

Note2: The torque for product mounting screws must never exceed 0.294N·m.

Note3: Mounting hole portions (4 pieces)

8.2 REAR VIEW

Note1: The values in parentheses are for reference.

Note2: The torque for product mounting screws must never exceed 0.294N·m.

Note3: Mounting hole portions (4 pieces)

Unit: mm

#### REVISION HISTORY

The inside of latest specifications is revised to the clerical error and the major improvement of previous edition. Only a changed part such as functions, characteristic value and so on that may affect a design of customers, are described especially below.
