2. The test systems refer to Note 1 and Note 2.
3. Flicker pattern(pixel inversion： Line inversion)

Flicker for line inversion

Note 1: Definition of optical measurement system.

1.Transsitive mode： The optical characteristics should be measured in dark room. After 5 Minutes operation, the optical properties are measured at the center point of the LCD screen. All input terminals LCD panel must be ground when measuring the center area of the panel.

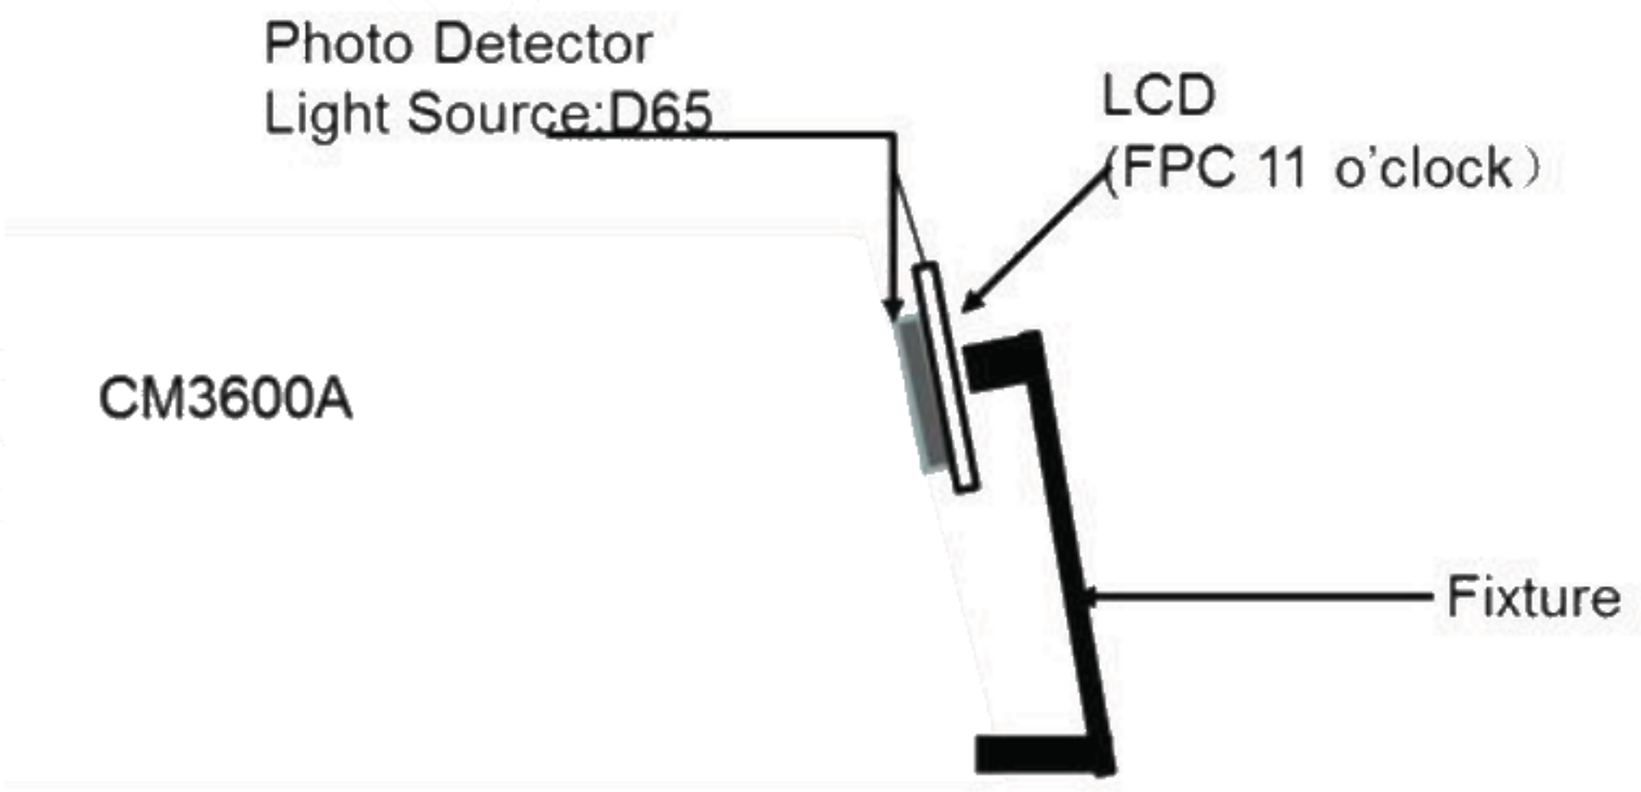
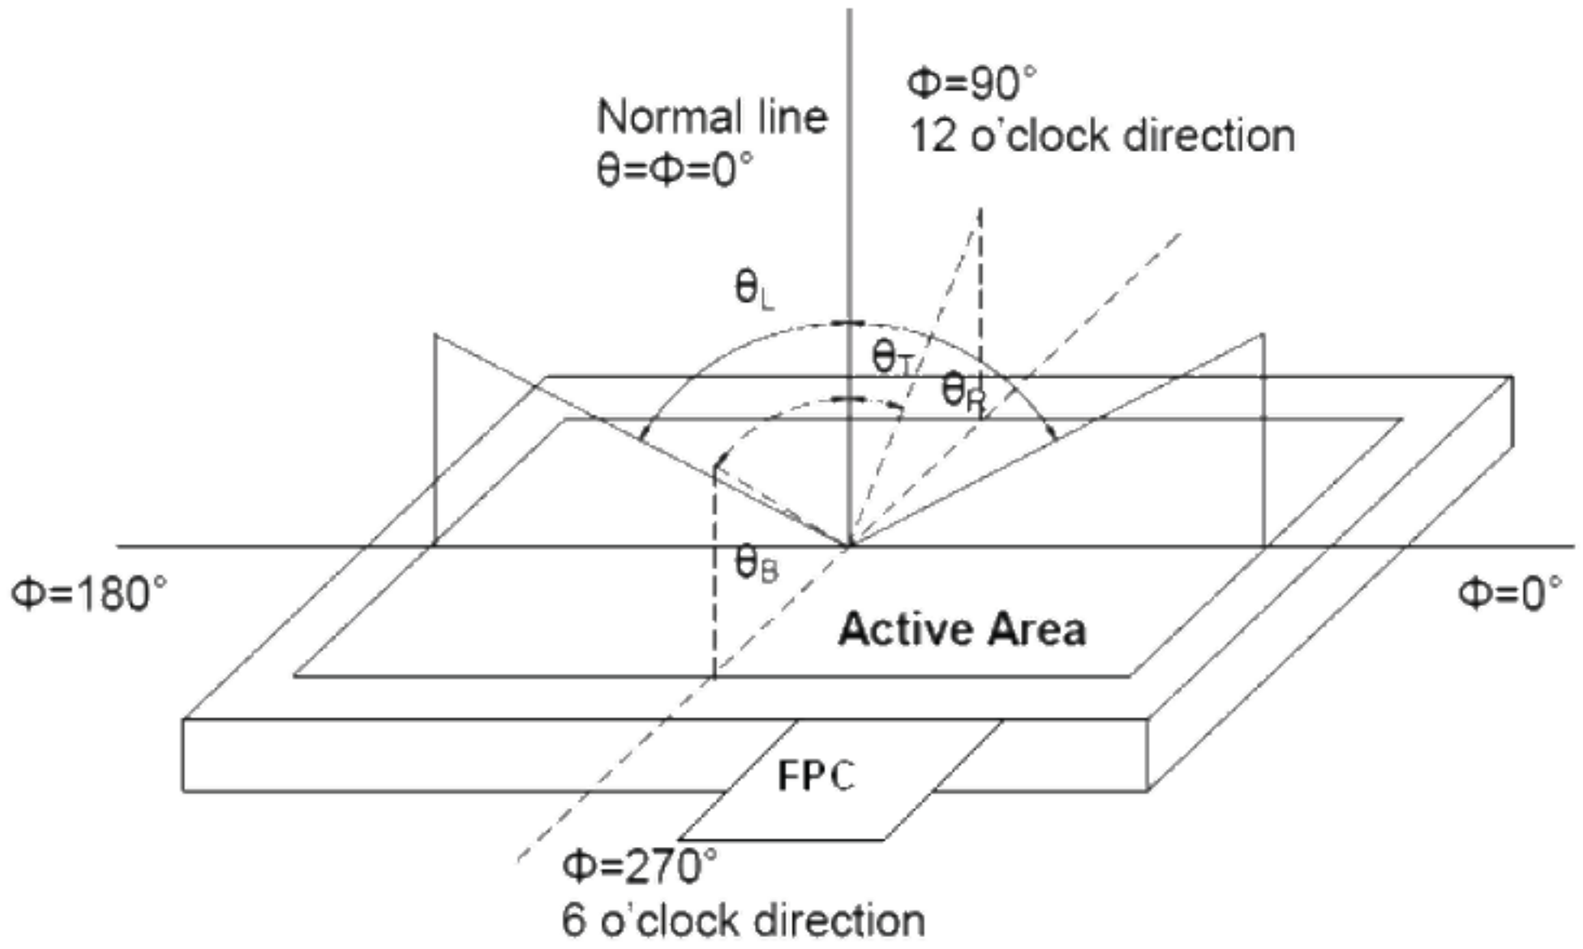
Viewing angle	LCD-5200	
Flicker		



Note 2: Definition of viewing angle range and measurement system.

viewing angle is measured at the center point of the LCD by CONOSCOPE(ergo-80)。



Note 3: Definition of contrast ratio

$$\text{Contrast ratio (CR)} = \frac{\text{Luminance measured when LCD is on the "White" state}}{\text{Luminance measured when LCD is on the "Black" state}}$$

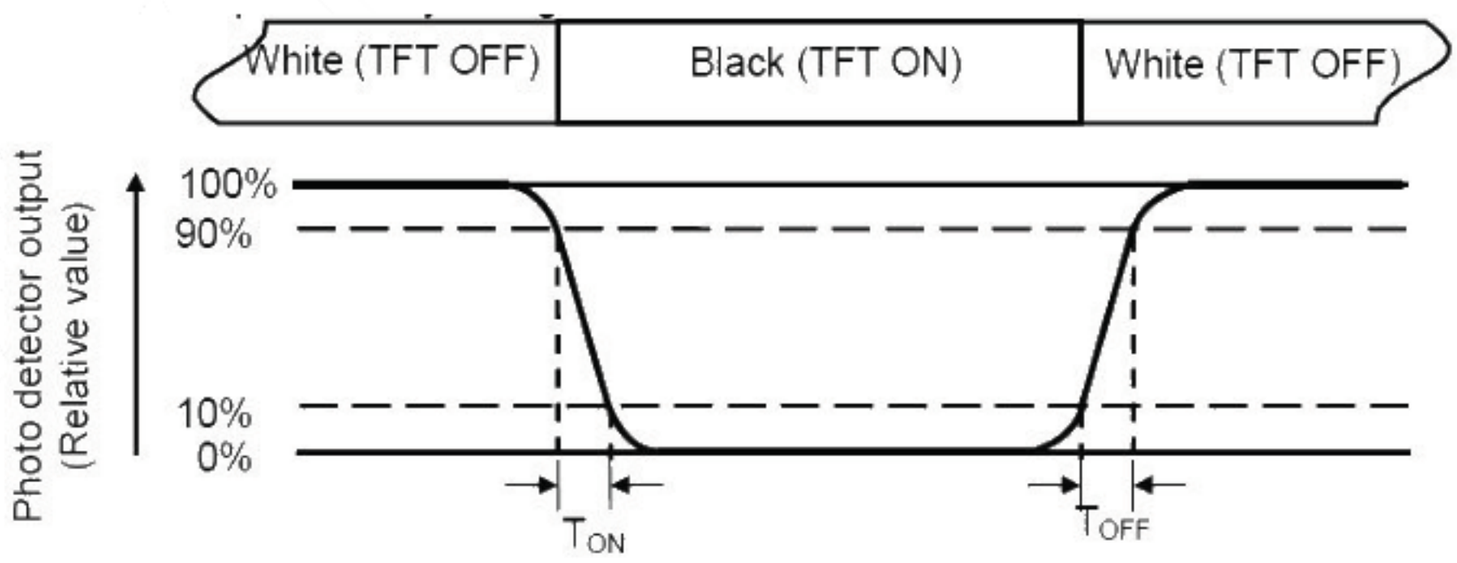
"White state ": The state is that the LCD should drive by Vwhite.

"Black state": The state is that the LCD should drive by Vblack.

Vwhite: To be determined Vblack: To be determined.

Note 4: Definition of Response time

The response time is defined as the LCD optical switching time interval between "White" state and "Black" state. Rise time (T_{ON}) is the time between photo detector output intensity changed from 90% to 10%. And fall time (T_{OFF}) is the time between photo detector output intensity changed from 10% to 90%.



Note 5: Definition of color chromaticity (CIE1931)

(1) Color coordinates measured at center point of LCD.

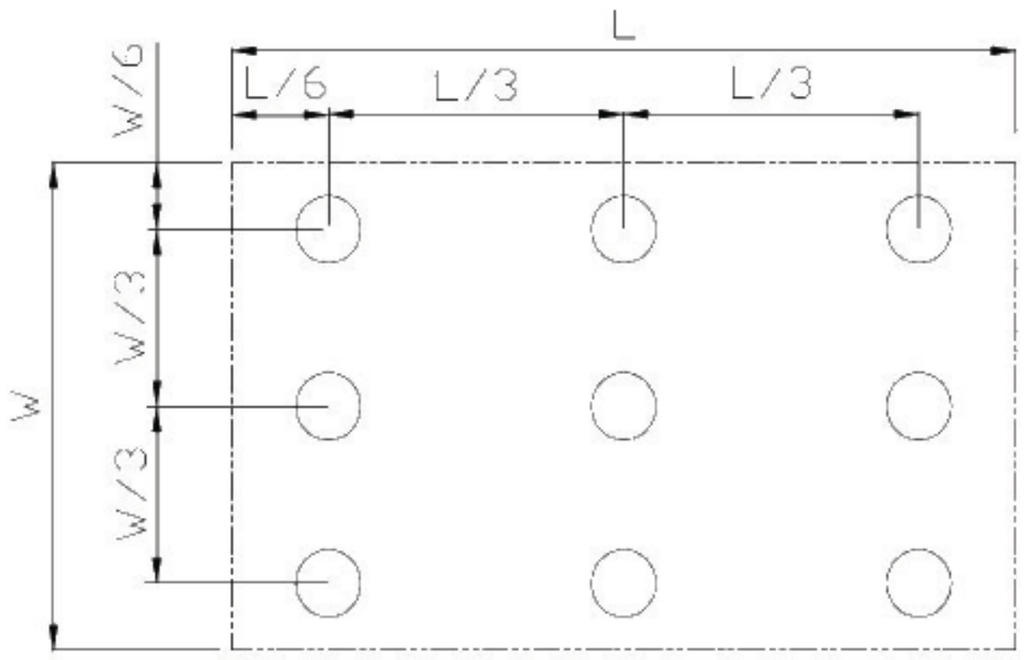
(2) For reflective mode color chromaticity we need to test at least 3 different batches to make sure the stability of panel and it accepts reasonable change after we get the stability data.

Note 6: Definition of Luminance Uniformity

Active area is divided into 9 measuring areas (Refer Fig. 2). Every measuring point is placed at the center of each measuring area.

Luminance Uniformity (U) = Lmin/ Lmax

L-------Active area length W----- Active area width



Lmax: The measured Maximum luminance of all measurement position.

Lmin: The measured Minimum luminance of all measurement position.

Note 7: Definition of Luminance:

Measure the luminance of white state at center point.

8	Vibration Test	Frequency range:10~55Hz, Stroke:1.5mm Sweep:10Hz~55Hz~10Hz 2 hours for each direction of X.Y.Z. (for total)(Package condition)	IEC60068-2-6:1982 GB/T2423.10—1995
9	Mechanical Shock (Non OP)	60G 6ms, ±X,±Y,±Z 3times, for each direction	IEC60068-2-27:1987 GB/T2423.5—1995
10	Package Drop Test	Drop onto the field floor from 76 cm heights, 6 faces, 3 edges and one of 8 corners. Total is 10 times	IEC60068-2-32:1990 GB/T2423.8—1995
11	Image sticking test	40° 6 hours, release 40min	No Image sticking

Note1: Ta is the ambient temperature of sample.

Note2: Before cosmetic and function test, the product must have enough recovery time, at least 2 hours at room temperature.

Note 3: In the standard condition, there shall be no practical problem that may affect the display function. After the reliability test, the product only guarantees operation, but don't guarantee all of the cosmetic specification.

Note 4： Image sticking test is as below.

10 Precautions for Use of LCD Modules

10.1 Handling Precautions

10.1.1 The display panel is made of glass. Do not subject it to a mechanical shock by dropping it from a high place, etc.

10.1.2 If the display panel is damaged and the liquid crystal substance inside it leaks out, be sure not to get any in your mouth, if the substance comes into contact with your skin or clothes, promptly wash it off using soap and water.

10.1.3 Do not apply excessive force to the display surface or the adjoining areas since this may cause the color tone to vary.

10.1.4 The polarizer covering the display surface of the LCD module is soft and easily scratched. Handle this polarizer carefully.

10.1.5 If the display surface is contaMinated, breathe on the surface and gently wipe it with a soft dry cloth. If still not completely clear, moisten cloth with one of the following solvents:

- Isopropyl alcohol
- Ethyl alcohol

Solvents other than those mentioned above may damage the polarizer. Especially, do not use the following:

- Water
- Ketone
- Aromatic solvents

10.1.6 Do not attempt to disassemble the LCD Module.

10.1.7 If the logic circuit power is off, do not apply the input signals.

10.1.8 To prevent destruction of the elements by static electricity, be careful to maintain an optimum work environment.

10.1.8.1 Be sure to ground the body when handling the LCD Modules.

10.1.8.2 Tools required for assembly, such as soldering irons, must be properly ground.

10.1.8.3 To reduce the amount of static electricity generated, do not conduct assembly and other work under dry conditions.

10.1.8.4 The LCD Module is coated with a film to protect the display surface. Be care when peeling off this protective film since static electricity may be generated.

10.2 Storage precautions

10.2.1 When storing the LCD modules, avoid exposure to direct sunlight or to the light of fluorescent lamps.

10.2.2 The LCD modules should be stored under the storage temperature range. If the LCD modules will be stored for a long time, the recommend condition is:

Temperature : 0℃ ～ 40℃ Relatively humidity: ≤80%

10.2.3 The LCD modules should be stored in the room without acid, alkali and harmful gas.

10.3 Transportation Precautions

10.3.1 The LCD modules should be no falling and violent shocking during transportation, and also should avoid excessive press, water, damp and sunshine.

10.4 Bar Code definition on module

Note: Bar Code definition

Definition label is Panel ID, and it is unique and includes manufacture relevant information, for instance TM070RDHG29. G1016A1GC700FC Label definition as below:

G1016: Produce No.

A1: Produce line

G: 2014 year (A: 2008, B: 2009, C: 2010…);

C: December (1-9:Jan-Sep, A-C: Oct- Dec.)

7: Date 7 (date1-31,from 1-9,A-X,not including I,O)

00FC: Serial No(start from 0001).

REV NO.	REV DATE	CONTENTS	REMARKS
1.0	2016-5-27		
Shanghai Tianma Micro-Electronics CO.,LTD			

1. Scope:

The incoming inspection standards shall be applied to TFT-LCD Modules (hereinafter called "Modules") that supplied by Shanghai Tianma Micro-Electronics Corporation.

2. Incoming Inspection

The customer shall inspect the modules within twenty calendar days of the delivery date（the “inspection period）at its own cost. The result of the inspection（acceptance or rejection）shall be recorded in writing, and a copy of this writing will be promptly sent to the seller, If the results of the inspecting from buyer does not send to the seller within twenty calendar days of the delivery date. The modules shall be regards as acceptance.

Should the customer fail to notify the seller within the inspection period, the buyers right to reject the modules. Shall be lapsed and the modules shall be deemed to have been accepted by the buyer.

3. Inspection Sampling Method

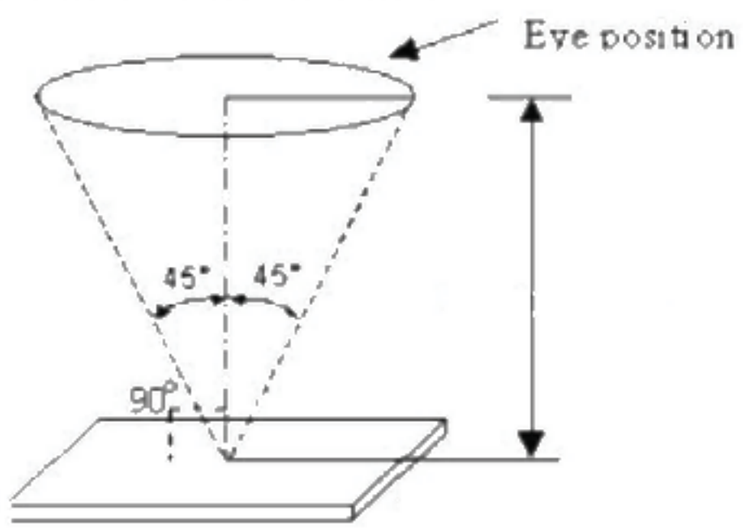
3.1. Lot size: Quantity per shipment lot per model
3.2. Sampling type: Normal inspection, Single sampling
3.3. Inspection level: II
3.4. Sampling table: MIL-STD-1916
3.5. Acceptable quality level （AQL）
Major defect: accept:0, reject:1
Minor defect: AQL=1.00

4. Inspection Conditions

4.1 Ambient conditions:
a. Temperature: Room temperature 25±5℃
b. Humidity: (60±10) %RH
c. Illumination: Appearance 700±100 Lux, Display 100±50 Lux (The luminance at an inspection desk surface with single non-directive fluorescent lamp)

4.2 Viewing distance
The distance between the LCD and the inspector’s eyes shall be at least 30±5 cm.

4.3 Viewing Angle
U/D: 45°/45° L/R: 45°/45°



5. Inspection Criteria

Defects are classified as major defects and minor defects according to the degree of defectiveness defined herein.

5.1 Major defect

Item No	Items to be inspected	Inspection Standard
5.1.1	All functional defects	1) No display 2) Display abnormally 3) Short circuit 4) line defect

Note: 1. Dot defect is defined as the defective area of the dot area is larger than 50% of the dot area.

2. Polarizer bubble is defined as the bubble appears on active display area. The defect of polarizer bubble shall be ignored if the polarizer bubble appears on the outside of active display area.

3. ND 使用方法：ND 与 panel 平行垂直距离 3~5cm，肉眼与 panel 正视距离 30±5cm

4. Foreign particle on the surface of the LCM should be ignored.

6. Mechanics specification

As for the outside dimension, weight of the modules, please refer to product specification for more details

7. Precaution

Please pay attention to the following items when you use the LCD Modules:

7-1 Do not twist or bend the module and prevent the unsuitable external force for

display module during assembly.

7-2 Adopt measures for good heat radiation. Be sure to use the module with in the specified temperature.

7-3 Avoid dust or oil mist during assembly.

7-4 Following the correct power sequence while operating. Do not apply the invalid signal, otherwise, it will cause improper shut down and damage the module.

7-5 Less EMI: it will be more safety and less noise.

7-6 Please operate module in suitable temperature. The response time & brightness will drift by different temperature.

7-7 Avoid to display the fixed pattern (exclude the white pattern) in a long period, otherwise, it will cause image stains.

7-8 Be sure to turn off the power when connection of disconnecting the circuit.

7-9 Polarizer scratches easily, please handle it carefully.

7-10 Display surface never likes dirt of stains.

7-11 A dew drop may lead to destruction. Please wipe off and moisture before using module.

7-12 Sudden temperature changes cause condensation, and it will cause polarizer damaged.

7-13 High temperature and humidity may degrade performance. Please do not expose the module to the direct sunlight and so on.

7-14 Acetic acid or chlorine compounds are not friends with TFT display module.

7-15 Static electricity will damage the module, please do not touch the module without any grounded device.

7-16 Do not disassemble and reassemble the module by self.

7-17 Be careful do not touch the rear side directly.

7-18 Not strong vibration or shock. It will cause module broken.

7-19 Storage the modules in suitable environment with regular packing.

7-20 Be careful or injury from a broken display module.

7-21 Please avoid the pressure adding to the surface (front or rear side) of modules, because it will cause the display non-uniformity of other function issue.

7-22 Please follow the storage environment conditions:

a. Temperature: Room temperature 23±4℃

b. Humidity: (50±30) ％RH.

7-23 Display warranty period is one year.
